REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT

BUREAU OF THE MINT

Washington, D. C., September 25, 1930.

In compliance with the provisions of section 548, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1930, being the fifty-eighth annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual precious metals of the United States for the calendar year 1929.

OPERATIONS OF THE MINTS AND ASSAY OFFICES

PART I

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1930

Coinage

1

Coinage of large demand for 1-cent and 5-cent coins, with the usual output of silver coins below the dollar, featured the fiscal year ended June 30, 1930. Overdue operation was required at the Philadelphia mint to meet this demand, but of shorter duration than during the preceding year because of improvements made in operating processes. The only gold coinage was made at Philadelphia and consisted of 21,920,500 in quarter eagles (\$2.50 pieces) to meet the usual Christmas demand. Most of these small gold coins quickly returned to vaults after Christmas. Their undecorated reverse for circulating purposes, demonstrated through a series of years, resulted in legislation of April 11, 1926, discontinuing both the coinage and issue by the Treasury of silver and the silver coin of the act. The foreign coinage of the fiscal year totaled 299,267,200 pieces, foreign coins introduced totaled 2,474,000 pieces, giving a grand total of 301,741,200 pieces as compared with a grand total of the prior year of 299,267,200 pieces, consisting of 281,250,000 domestic and 18,017,200 foreign pieces. The face value of the domestic coins was \$10,125,000, of which \$1,675,000 was gold, \$1,175,000 silver, and \$7,275,000 nickel and bronze, and \$25,000,000 foreign coins.

REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 20, 1930.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1930, being the fifty-eighth annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1929.

OPERATION OF THE MINTS AND ASSAY OFFICES

Institutions of the Mint Service

During the fiscal year ended June 30, 1930, 10 mint-service institutions were in operation; coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which makes large sales of fine gold bars; mints at New Orleans and Carson City conducted as assay offices; and assay offices at Boise, Helena, Seattle, and Salt Lake City. The six last-named institutions are, in effect, bullion-purchasing agencies for the large institutions and also serve the public by making assays of ores and bullion. Electrolytic refineries are operated at the New York, Denver, and San Francisco institutions.

Coinage

Continued large demand for 1-cent and 5-cent coins, with the usual output of silver coins below the dollar, featured the fiscal year ended June 30, 1930. Overtime operation was required at the Philadelphia mint to meet this demand, but of shorter duration than during the prior fiscal year because of improvements made in operating processes. The only gold coinage was made at Philadelphia and consisted of \$1,330,000 in quarter eagles (\$2.50 pieces) to meet the usual Christmas demand. Most of these small gold coins quickly return to vaults after Christmas. Their undesirability for circulation purposes, demonstrated through a series of years, resulted in legislation (act of April 11, 1930), discontinuing both the coinage and issue by the Treasury of quarter eagles after the date of the act. The domestic coinage of the fiscal year totaled 399,467,200 pieces, foreign coins manufactured totaled 3,485,000 pieces, giving a grand total of 402,952,200 pieces as compared with a grand total of the prior year of 408,301,350 pieces, consisting of 361,650,350 domestic and 46,651,000 foreign pieces. The face value of the domestic coinage totaled \$16,278,180, of which \$1,330,000 was gold, \$9,177,500 silver coins, below the dollar, \$2,864,450 nickels, and \$2,906,230 cents.

All of the coins made for foreign governments were executed at the Philadelphia Mint. For Nicaragua 210,000 silver pieces, 100,000 nickel pieces, and 750,000 bronze pieces were made; for Venezuela 425,000 silver pieces; and for Costa Rica 2,000,000 bronze pieces; total 3,485,000 pieces.

Gold Operations

Gold acquired by the Government at the several mint-service institutions during the fiscal year 1930 totaled \$315,607,366.83; United States gold coin received by the mints for recoinage amounted to \$1,663,787.66; transfers of gold between mint offices totaled \$139,774,408.13; the aggregate amount of gold received by the several mint-service institutions during the fiscal year 1930 was \$457,045,562.62, which compares with \$503,702,578.14 during the prior year.

Silver Operations

Receipts of purchased silver during the fiscal year 1930 totaled 4,491,615.09 fine ounces, the average cost of which was 46.69 + cents per ounce, total cost being \$2,097,304.94. Of this amount 4,491,615.09 fine ounces, a total of 1,483,691.88 was silver contained in gold deposits. Silver received in exchange for bars bearing the Government stamp totaled 1,763,551.62 fine ounces; United States silver coin received for recoinage totaled 2,853,484.77 fine ounces, the recoinage value being \$3,944,682.59; silver deposited in trust by other governments totaled 136,624.29 fine ounces; and transfers between mint-service offices totaled 790,506.20 fine ounces, making the aggregate quantity of silver received by the several mint-service offices during the fiscal year 10,035,781.97 fine ounces, as compared with 9,465,390.36 ounces during the prior year.

The New York market price of silver during the fiscal year ended June 30, 1930, averaged \$0.46291; the lowest price was \$0.33250, on June 21, 1930, the lowest ever recorded, and the highest price \$0.535, on July 19, 1929.

Refineries

The mint-service refineries that are operated at New York, Denver, and San Francisco produced 2,755,400 fine ounces (94.47 tons) of electrolytically refined gold during the past fiscal year, which compares with 98.37 tons in the prior year; and 3,156,096 fine ounces (108.2 tons) of electrolytically refined silver, which compares with 113.5 tons during the prior year.

The stock of gold and silver in unrefined bullion on hand was increased during the past year by about 28 tons, to 440 tons, as compared with the prior year's reduction of about 19 tons. The Denver refinery operated only during the last half of the fiscal year, as during the prior year.

Additions and improvements

The following new and improved machinery and devices, and improved operating methods, were introduced in the mint institutions during the fiscal year under review:

New and improved molds for minor coinage ingots were adopted in the melting and refining department of the mint at Philadelphia. The lock on these molds has a two-bearing surface, which permits

OBVERSE

REVERSE

MEDAL AWARDED COL. CHARLES A. LINDBERGH BY
THE CONGRESS OF THE UNITED STATES

of the mold being tightly locked and eliminates, to a great extent, fins on the ingots. The shape of the molds has been changed. The long tapering point has been reduced to a taper of one-half inch instead of the wedge shape. The device permits an increase of about 2 pounds in the weight of the ingot and effects a material saving in scrap.

While the crucibles now being purchased are superior in quality to those available in recent years, experiments made to test the life of the crucibles resulted in obtaining 25 per cent greater service than heretofore.

It has also been demonstrated that the use of powdered coke instead of charcoal on nickel melts prevents oxidation, stays on the melt better, and in general is more satisfactory than charcoal.

The grinding device, built in the Philadelphia mint shops, for grinding rather than filing the edges of silver ingots, has proved to be so satisfactory that hand filing has been discontinued. This improved method has been used for grinding minor coinage ingots for some years past, but many changes had to be made in the method before applying it to silver to safeguard the silver filings. This has been accomplished by covering the wheel with a hood and placing a receptacle under the grinding wheel.

In the mint at Denver the structural steel hood erected over the melting furnaces of the refinery melting room in connection with improvements in flues and dust-settling devices has proved efficient in saving metallic values.

The new type of melting furnaces installed, using natural gas, insulation against radiation of heat, and preheating of air from waste heat, has resulted in economy in the use of fuel in the increased production of ingots. The melting time has been reduced and the service life of furnace linings has been increased.

Rectangular precipitating and washing tanks have been replaced with round tanks of Oregon cedar, impregnated with paraffin, which prevents leakage and improves service conditions.

Chrome-nickel alloys are now used in the cast-iron ingot molds, producing fine-grain castings, free from blow holes.

An improved reviewing belt, designed and constructed in the machinery department of the Denver mint, has been installed in the coin press room of that institution.

Lindbergh Medal

By act approved May 24, 1928, Congress authorized the presentation of a gold medal to Col. Charles A. Lindbergh to commemorate his flight in the *Spirit of St. Louis* from New York to Paris May 20-21, 1927. The obverse of the medal shows the head of Colonel Lindbergh wearing the helmet of an aviator. The reverse shows a flying eagle, typifying the airplane; the sun and stars symbolize the flight through day and night. The medal was designed by Mrs. Laura Gardin Fraser, sculptress, New York City.

Stock of Coin and Monetary Bullion in the United States

On June 30, 1930, the estimated stock of domestic coin in the United States was \$2,473,244,452, of which \$1,496,305,505 was gold, \$539,959,520 standard silver dollars, \$310,978,375 subsidiary silver coin, and \$126,001,052 minor coin.

The stock of gold bullion in the mints, assay offices, and Federal reserve banks on the same date was valued at \$3,038,560,201, an increase during the year of \$122,098,265; the stock of silver bullion was 11,129,557.07 fine ounces, an increase of 697,727.14 fine ounces.

Production of Gold and Silver

Domestic gold production during the calendar year 1929 was \$45,651,400, as compared with \$46,165,400 in 1928. The output has declined to about 45 per cent of that for the record year 1915, when the total was \$101,035,700.

Silver of domestic production during 1929 totaled 61,327,868 ounces, valued at \$32,687,754; this compares with 58,462,507 ounces, valued at \$34,200,567, for 1928, and with the record production of 1915, 74,961,075 fine ounces, valued at \$37,397,300.

Industrial Consumption of Gold and Silver

Gold consumption in the industrial arts during the calendar year 1929 is estimated at \$56,903,667, of which \$24,873,136 was new material.

Silver used in the arts is estimated at 42,359,082 fine ounces, of which 30,977,559 fine ounces was new material.

As compared with the prior year, silver consumption was about 6,810,000 ounces more, and gold consumption increased about \$323,000.

Import and Export of Domestic Gold Coin

The net import of domestic gold coin during the fiscal year ended June 30, 1930, was \$92,264,082; during the prior fiscal year there was net import of \$45,065,099. During the 16 fiscal years 1915-1930, since the opening of the World War, there has been a net export of \$1,022,629,070. Since 1870 the net export of domestic gold coin has been \$1,900,278,134, as per tabulation by fiscal years, which may be found in another section of this volume.

Revision of Statistics on Consumption of Gold in Industrial Arts, also Reconciliation of Gold Statistics, 1914-1928

A revised series of estimates of the consumption of gold in the industrial arts for the period of the Federal reserve system, 1914-1928, appears in the table on page 39 of this volume. This revision resulted from a study reconciling official gold statistics, summarized briefly in the following paragraphs.

The stock of monetary gold in the United States comprises the gold holdings of the Federal reserve banks and the United States Treasury as well as the domestic gold coin in circulation. Changes in this stock are accounted for by the net movements of gold in or out of the country and in or out of earmark, and the total gold production in the United States (less net consumption in the arts). Gold exported abroad decreases our monetary stock; gold imported from abroad increases it. These statements apply also to gold set aside as earmarked and gold released from earmark. Gold produced from mines in the United States, unless exported or consumed in the industrial arts (i. e., manufactured into jewelry, dental supplies, etc.) obviously adds to the gold monetary stock of the country.

Published official annual statistics representing the movements and transactions just mentioned should together, if complete, accurate, and if all classifications are made on the same basis, equal and explain the changes from year-end to year-end in the gold monetary stock statistics. But this is not the case. Over the period of the Federal reserve system, 1914-1928, the net changes in published statistics representing imports and exports, changes in earmarked gold, production and consumption, differ from changes in published monetary gold-stock statistics by the following amounts:

[In millions of dollars]

1914.....	9. 6	1922.....	21. 4
1915.....	5. 9	1923.....	8. 6
1916.....	-44. 9	1924.....	25. 3
1917.....	30. 9	1925.....	-11. 6
1918.....	-5. 1	1926.....	16. 1
1919.....	-5. 7	1927.....	28. 8
1920.....	-15. 6	1928.....	20. 0
1921.....	21. 5		

The varying size and direction of these discrepancies indicate disagreement sufficient to throw all the statistics involved into doubt, unless the main sources of differences can be located and explained. Gold statistics have consequently been carefully analyzed and examined in this study *resulting in the approximately complete reconciliation or explanation of the discrepancies just shown*. Causes for the discrepancies have been found mainly in the figures representing the imports and exports of gold, to a smaller degree in the estimates of "consumption of new gold," and to some extent in the Treasurer's stock figure, with small differences in still other items.

The conclusions of this study are given at length on pages 116 to 137 of this volume, where the detailed changes in the consumption estimate are also exhibited and explained.

Appropriations, Expenses, and Income

Appropriations available for mint service during the fiscal year 1930 totaled \$1,710,040, and reimbursements to appropriations for services rendered amounted to \$37,025.69, making a total of \$1,747,065.69.

Expenses amounted to \$1,709,164.49, of which \$1,640,286.24 was chargeable to appropriations and \$68,878.25 chargeable to income.

The income realized by the Treasury from the mint service aggregated \$8,461,402.73, of which \$7,945,396.37 was seigniorage. The seigniorage on subsidiary silver coin was \$3,121,940.33; on nickel coin, \$2,390,200.61; and on bronze coin, \$2,433,255.43.

Summary of appropriations, expenses, and balances, fiscal year 1930

Items	Salaries and expenses	Transportation of bullion	Total
Appropriations.....	\$1, 690, 040. 00	\$20, 000. 00	\$1, 710, 040. 00

Domestic Coinage

Details of the coinage executed during the fiscal year ended June 30, 1930, follow:

Denomination	Philadel- phia	San Fran- cisco	Denver	Total value	Total pieces
Quarter eagles ¹	\$1, 330, 000	-----	-----	\$1, 330, 000	532, 000
Total gold.....	1, 330, 000	-----	-----	1, 330, 000	532, 000
Half dollars.....	-----	\$951, 000	\$500, 600	1, 451, 600	2, 903, 200
Quarter dollars.....	4, 076, 000	441, 000	339, 500	4, 856, 500	19, 426, 000
Dimes.....	1, 893, 000	473, 000	503, 400	2, 869, 400	28, 694, 000
Total silver.....	5, 969, 000	1, 865, 000	1, 343, 500	9, 177, 500	51, 023, 200
Five-cent nickels.....	2, 185, 600	332, 450	346, 400	2, 864, 450	57, 289, 000
One-cent bronze.....	2, 092, 090	412, 140	402, 000	2, 906, 230	290, 623, 000
Total minor.....	4, 277, 690	744, 590	748, 400	5, 770, 680	347, 912, 000
Total coinage.....	11, 576, 690	2, 609, 590	2, 091, 900	16, 278, 180	399, 467, 200

¹ Coinage discontinued, act of Apr. 11, 1930. Last coinage of quarter eagle Oct. 22, 1929, \$505,000.

Coinage by the United States for Other Countries

The coinage by the United States mint at Philadelphia for other countries during the same period totaled 3,485,000 pieces, as compared with 46,651,000 during the prior year, as follows:

Country and denomination	Gold	Silver	Nickel	Bronze
Nicaragua:	<i>Pieces</i>	<i>Pieces</i>	<i>Pieces</i>	<i>Pieces</i>
50 centavo.....		20,000		
25 centavo.....		40,000		
10 centavo.....		150,000		
5 centavo.....			100,000	
1 centavo.....				750,000
Venezuela:				
2 bolivar.....		425,000		
Costa Rica:				
10 centimo.....				500,000
5 centimo.....				1,500,000
Total pieces.....		635,000	100,000	2,750,000
Previous fiscal year.....	25,000	10,210,000	34,400,000	2,016,000

Issue of Fine Gold Bars for Gold Coin and Gold Bullion

The value of the fine gold bars issued in exchange for gold coin and bullion monthly by the United States mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the fiscal year 1930, was as follows:

EXCHANGED FOR GOLD COIN OR OTHER GOLD ASSETS

Month	Philadelphia	San Francisco	Denver	New York	Total
1929					
July.....	\$50,174.86	\$10,013.68		\$2,264,737.88	\$2,324,926.42
August.....	90,201.36	72,610.23		4,096,420.11	4,259,231.70
September.....	65,435.12	20,027.17	\$5,005.99	5,017,105.80	5,107,574.08

Purchase of Minor-Coinage Metal for Use in Domestic Coinage

During the fiscal year 1930 there were purchased at the mint at Philadelphia 33,636,545.06 troy ounces of minor-coinage metals at a cost of \$482,704.67, which includes 3,194,719.79 troy ounces in nickel blanks prepared for stamping, costing \$112,775.44.

There were also purchased during the same period at the mint at San Francisco 6,087,185.38 troy ounces of minor-coinage metals at a cost of \$80,344.93. The Denver Mint purchased 5,139,706.35 troy ounces of minor-coinage metals for use in coinage, costing \$70,112.62.

Minor-Coin Distribution Costs

The minor-coinage distribution costs paid during the fiscal year 1930 from the profits on minor coinage amounted to \$66,314.55, as follows:

Transportation.....	\$59, 803. 94
Insurance.....	26. 63
Containers.....	6, 483. 98
Total.....	66, 314. 55

Minor Coins Outstanding

The following statement shows the coinage of minor coins, by denominations, the amount on hand, issued, melted, and outstanding June 30, 1930. Minor coins were first manufactured at the Philadelphia Mint in 1793; at the San Francisco Mint in 1908; at the Denver Mint in 1911.

Denominations	Coined	On hand	Issued (net)	Melted	Amount issued and outstanding June 30, 1930
Philadelphia:					
Copper cents.....	\$1, 562, 887. 44	-----	\$1, 562, 887. 44	\$382, 962. 16	\$1, 179, 925. 28

Proof Bullion (1.000 Fine)

In order to establish uniformity in assay of bullion in the offices of the mint service all proof gold and proof silver is made at the mint at Philadelphia and furnished to other offices when required.

The amount made during the fiscal year 1930 was: Gold, 600 ounces; silver, 236 ounces.

Operations of the Melting and Refining and of the Coining Departments, Fiscal Year 1930

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1930, was 12 million fine ounces of gold and 29.2 million fine ounces of silver. There were also operated upon at the coinage mints 126.1 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative officers, as prescribed in section 3542, Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

Refining Operations

The net product of electrolytically refined gold and silver of the mint service during the fiscal year 1930 was 5,911,496.838 fine ounces; other electrolytic output included the equivalent of the refined metals used for aiding the processes, 2,445,780.234 fine ounces; the product of melting operations (only) totaled 2,048,256.004 fine ounces, making the total output of the refineries 10,405,533.076 fine ounces. Details are shown in the following table:

Wastage of Coinage Metal, and Loss on Sale of Sweeps

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1930, was \$3,304.22. A loss of \$2,176.13 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the table following:

Item	Mint at—			Assay office at New York	Total
	Philadel- phia	San Fran- cisco	Denver		
Silver wastage:

Total reimbursements.....	3,930.63	905.31	246.77	397.64	5,480.35

¹ Includes \$42.42 on foreign coinage.

Engraving Department

During the fiscal year ended June 30, 1930, the engraving department made 3,277 working dies for domestic coinage. Master dies, hubs, and working dies were made for domestic, Philippine, Venezuelan, Nicaraguan, and Chinese coinage, also for the Post Office, War, and Navy Departments.

The die-making processes included the making of 37 electroplates from models for coin and medals; and chromium plating was applied to 44 coinage dies, 163 coinage collars, and 714 automatic scale parts.

Laboratory, Bureau of the Mint

From the domestic coinage of the calendar year 1929 the assayer of this bureau examined and tested 70 gold coins and 328 silver coins, all of which were found within the legal requirements as to weight and fineness.

The following table summarizes results of fineness tests on domestic coins, the limit of tolerance being one one-thousandth above or below 900 for gold coins and three one-thousandths above or below 900 for silver coins.

Fineness (thousandths)	Number of gold coins, Philadelphia	Number of silver coins			
		Philadelphia	San Francisco	Denver	Total
898.2			1		1
898.6		2	6	1	9
898.8		6	1	4	11

Assay Commission's Annual Test of Coin

Section 3547 of the Revised Statutes provides for an annual test of the domestic coinage executed during the calendar year 1929, by a commission, of whom part are ex officio members, the others being appointed, without compensation, by the President. The purpose is "to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight." The commission, which met at the Philadelphia Mint February 12 and 13, 1930, reported the following results of their examination:

The committee on counting respectfully reports that the packages containing the pieces reserved by the several mints for the trial of coins, in accordance with section 3539 of the Revised Statutes, were delivered to us by the superintendent of the mint at Philadelphia:

That the packages delivered were compared with the transcripts furnished with them and were found to be correct as to date, number of delivery, and denomination.

Several packages were selected by this committee from the deliveries of each month of all denominations coined, and the coins therein were counted and found to agree with the number called for in each package.

The verification of the packages containing the reserved coins being completed, the committee on assaying and the committee on weighing selected such coins as were required for their examination.

The committee on weighing report that they have taken at random from the several parcels of reserved coins of each mint such a number of pieces of each of the denominations represented and so distributed, by dates of coinage, as seemed to be sufficient for the purposes of weighing. These coins have been individually weighed by the committee and their respective weights ascertained to an accuracy of 0.01 grain, and the results recorded. The weights of these coins are given in the appended table. It will be noted that every coin weighed was well within the deviation allowed by law.

The coins were directly weighed against a set of sealed coin weights, supplemented by three sets of grain weights, delivered to the commission from the Bureau of Standards, Washington, D. C., in sealed packages, and accompanied by certificates signed by the Director of the Bureau. The weighings were made on a Troemner balance belonging to the Philadelphia Mint. Prior to the weighing of the coins this balance was tested by your committee as to equality of arms and sensibility, and found to be in excellent condition and entirely satisfactory for the purpose of the committee.

Following the weighing of the coins your committee tested the sensibility of the balance used to compare the working standard troy weight of the Philadelphia Mint, and the summation of the standard weights of 10 ounces+2 ounces was found to equal the troy pound within the sensibility of the balance (about 0.0001 troy ounce).

The deviations from standard of the heaviest and lightest coins weighed, of each denomination from each mint, are shown in the following table:

Denomination	Legal deviation allowed	Philadelphia		San Francisco		Denver	
		Heavy	Light	Heavy	Light	Heavy	Light
GOLD COINS							
Double eagle.....	Grains 0.50	Grains 0.27	Grains 0.33	Grains	Grains	Grains	Grains
Half eagle.....	.25		.13				
Quarter eagle.....	.25	.10					
SILVER COINS							
Half dollar.....	1.50			1.31	0.43	0.61	1.10
Quarter dollar.....	1.50	.82	.37	.36	.70	.46	.54
Dime.....	1.50	.33	.41	1.26	.60	1.10	1.10

The committee on assaying has completed the test assays on individual coins and mass melts representing the different denominations, coined by the mints at Philadelphia, San Francisco, and Denver during the calendar year 1929.

The legal allowance in the fineness of gold coin as prescribed by law is one one-thousandths and on silver three one-thousandths.

According to the following table showing the extreme variations found on individual coins and mass melts tested by the committee, the 1929 coinage of the several mints has been found safely within the legal limits:

Highest assays on gold coins: Philadelphia.....	900.2
Lowest assays on gold coins: Philadelphia.....	899.6
Highest assays on silver coins:	
Philadelphia.....	
San Francisco.....	900.4
Denver.....	900.2
Lowest assays on silver coins:

Mass melts:	
Gold—Philadelphia.....	898.0
Silver—	
Philadelphia.....	900.0
San Francisco.....	899.3
Denver.....	898.6
	899.3

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1930, is respectfully submitted.

R. J. GRANT,
Director of the Mint.

Hon. ANDREW W. MELLON,
Secretary of the Treasury.

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1929

INTRODUCTION

The annual estimate of the production of gold and silver in the United States is made by the Bureau of the Mint, the Department of the Interior. The latter makes a value estimate of the gold and silver produced in the United States during the year, and the former makes a value estimate of the gold and silver consumed in the United States during the year. The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint, the Department of the Interior. The official estimate of the consumption of gold and silver in the United States is made by the Bureau of the Mint, the Department of the Interior.

The production and consumption of gold and silver in the United States are shown by comparison of the two systems of estimates. The two systems are very similar and agree.

PART II

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1929

The production of gold and silver in the United States during the calendar year 1929 is estimated to have been \$1,215,000,000, or about 1.2% more than in 1928.

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1929

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1929 is estimated to have been \$45,651,400, and the production of silver is estimated at 61,327,868 fine ounces. A comparison of these figures with those for 1928 indicates \$514,000 decrease in production of gold and approximately 2,800,000 ounces increase in silver production.

As regards individual States, the outstanding differences in gold production as compared with the prior year are increases by the Philippine Islands of about \$1,300,000, by Alaska of about \$900,000, and by Utah of over \$500,000; and decreases by California of over \$2,000,000, and by Colorado of about \$800,000.

Individual States' material differences in silver production as compared with the prior year include increases of approximately 2,000,000 ounces in Montana, about 1,300,000 ounces in Arizona, and about 600,000 ounces in Idaho, with a decrease of about 600,000 ounces in Nevada.

A brief review of mining conditions, for which acknowledgments are made to the United States Bureau of Mines, follows; the production figures therein differ as explained above, from the Bureau of the Mint production estimates. Further information concerning same can be obtained by those interested by addressing the last-named bureau at Washington.

ALASKA

Alaska mines in 1929 produced gold valued at \$7,761,000, compared with an output of \$6,845,000 in 1928. The value of silver produced in Alaska in 1929 was \$252,000, or about \$14,000 less than in 1928.

In 1929 about 47 per cent of the total gold production came from lode mines, compared with 51 per cent credited to lode mines in 1928, and 49.7 per cent in 1927.

The auriferous lode mines produced during the year gold valued at \$3,644,000 and silver valued at \$50,300. The copper ores contained \$187,400 in silver.

The value of the placer gold produced in Alaska in 1929 was \$4,117,000 compared with an output of \$3,347,000 in 1928. The

silver recovered from placer mining operations in 1929 was valued at \$14,300. It seems probable that the production of placer gold will be somewhat increased when several of the large mining enterprises now in course of development have completed their preparatory work.

Thirty gold dredges were operated in Alaska in 1929, three more than in 1928. The dredges in 1929 handled about 8,709,600 cubic yards of gravel and produced gold valued at \$2,932,000, against a production in 1928 of \$2,185,000. The increase is largely attributable to the operation of larger units handled with greater engineering efficiency. The total output of the dredges since this form of mining was introduced now amounts to \$39,008,000.

ARIZONA

Arizona produced gold in 1929 valued at \$4,182,287, an increase of \$214,799 from that of 1928, according to C. N. Gerry, of the United States Bureau of Mines. The larger part of the gold, or \$3,008,295, had its source in crude ore smelted. Gold in bullion from ore treated by amalgamation or cyanidation, which decreased, was valued at \$142,160, and gold in concentrate was valued at \$1,009,135. The gold from lode mines was derived from the following sources: Copper ore, \$3,710,362; dry or siliceous ore, \$332,444; lead ore, \$57,633; copper-lead ore, \$37,681; lead-zinc ore, \$37,105; and copper-lead-zinc ore, \$1,410. Gold from siliceous ore, chiefly from Mohave and Yavapai Counties, decreased about 29 per cent. Nearly 89 per cent of the State's gold came from copper ore, while placers produced only \$5,652 in gold. No dredges were operated. The largest producers of gold were the United Verde, Calumet & Arizona, Copper Queen, New Cornelia, United Verde Extension, and Magma mines.

The silver output amounted to 7,543,283 ounces, an increase of 751,932 ounces from the output of 1928. Silver from copper ore increased slightly, but that from siliceous ore decreased 83,334 ounces. The sources of the silver output were: Copper ore, 6,598,986 ounces; siliceous ore, 403,508 ounces; lead ore, 249,575 ounces; lead-zinc ore, 225,581 ounces; copper-lead ore, 62,809 ounces, copper-lead-zinc ore, 2,782 ounces; and placers, 42 ounces. The largest silver producers were the United Verde, Calumet & Arizona, Magma, Copper Queen, and United Verde Extension mines.

There were 412 mines producing during the year, of which number 22 only were placer mines.

CALIFORNIA

The total recoverable gold in ore and gravels treated in California in 1929, according to Victor C. Heikes, of the United States Bureau of Mines, was valued at \$8,526,703, of which 324 lode mines yielded \$4,656,096 and 478 placers (including dredges) \$3,870,607. Compared with the gold yield in 1928 this was a decrease of \$2,258,612 and the greatest decrease since 1920 as compared with 1919. Much of the loss in 1929 is accounted for by the decreased output of the dredges, though lode mines yielded \$1,278,590 less than in 1928. Of the total gold yield in 1929 lode mining produced 55 per cent and placer mining 45 per cent. Only four counties had a production of gold exceeding \$1,000,000, and these, in order of rank, were Nevada, Amador, Sacramento, and Yuba (first in 1928). Of the lode gold

output gold ore and tailings yielded 90 per cent; copper ore, tailings, etc., 9 per cent; and silver ore, 1 per cent. Of the placer gold output dredges yielded 93 per cent, surface placers 3 per cent, drift placers 2 per cent, and hydraulic placers 2 per cent. The gold output of 25 dredges (24 in 1928) was 19 per cent less than in the preceding year. One dredge in 1929 was an experimental affair and made only a test run. Twenty-six companies in the State produced more than 1,000 ounces of gold each and contributed nearly 90 per cent of the total gold output.

The mine production of silver in California was 1,176,895 ounces, valued at \$627,285, a decrease of 301,876 ounces in quantity and \$237,796 in value compared with 1928. No company produced more than 500,000 ounces, only 4 more than 100,000 ounces, 2 between 50,000 and 100,000 ounces, and 26 each with less than 50,000 ounces. The chief silver-producing counties in 1929 were Plumas, San Bernardino, and Napa, ranging from a high of 408,466 ounces to a low of 144,180 ounces, followed by Shasta, Mono, and Inyo, each with an output of between 40,000 and 50,000 ounces. Of the total silver output from lode mines dry silver ore yielded slightly over 41 per cent, copper ore, tailings, etc., 47 per cent; the remainder came about equally from gold ore and tailings and lead ore, with a small amount from lead-copper ore. The yield of silver from placer mines was 13,312 ounces, valued at \$7,095.

CENTRAL STATES

The total mine production of silver in the Central States in 1929 was 206,133 ounces, valued at \$109,869, which was 8,994 ounces more than the output in 1928. All the silver from Michigan (20,795 ounces) was derived from lode copper mines. Part of this silver came from refining the copper and part was from native silver marketed in lumps or nuggets. The mine production of silver from Missouri increased from 176,840 ounces in 1928 to 181,638 ounces in 1929. As none of the copper mines shipped any ore, all the silver was derived from lead ore mined in southeastern Missouri. Part of the silver came from lead skimmings and a little came from copper-lead matte, but most of it was recovered from residues of zinc concentrates floated from lead ores treated by the St. Joseph Lead Co. The increase in silver from Missouri in the last three years has been wholly from this source. The lead concentrates from southern Illinois fluorspar mines yielded 3,700 ounces of silver in 1929, which was 555 ounces more than in 1928.

COLORADO

Colorado mines produced \$4,417,358 in gold in 1929, as compared with \$5,304,876 in 1928, according to Charles W. Henderson, of the United States Bureau of Mines. The siliceous sulpho-telluride gold ores of the Cripple Creek district, Teller County, yielded in recovered amalgam and cyanidation bullion \$2,640,034, or 60 per cent of the State total. That part of the San Juan region, including Dolores, La Plata, Ouray, Rio Grande, San Juan, and San Miguel Counties, yielded \$1,038,217, or 24 per cent. Boulder, Clear Creek, and Gilpin Counties yielded \$235,830; Park County, \$206,797; Lake County, \$138,031; and Summit County \$48,996. Dry gold ores of

the State yielded \$3,634,594; dry gold and silver ores, \$320,744; dry silver ores, \$36,790; copper ores, \$61,493; lead ores \$47,289; lead-copper ores \$288; and zinc-lead ores, \$270,310.

The silver amounted to 4,397,374 ounces, as compared with 4,052,253 ounces in 1928. The following counties of the San Juan region—Dolores, La Plata, Mineral, Ouray, Saguache, San Juan, and San Miguel—yielded 2,710,788 ounces, or 62 per cent. Eagle County yielded 917,170 ounces; Lake County, 394,270 ounces; Clear Creek County, 168,850 ounces; and Pitkin County, 98,880 ounces. The sources of the silver were: Dry gold ore, 106,652 ounces; dry gold and silver ore, 270,216 ounces; dry silver ore, 1,721,358 ounces; copper ore, 784,932 ounces; lead ore, 333,367 ounces; lead-copper ore, 3,888 ounces; and zinc-lead ore, 1,176,413 ounces.

Lode mines in 1929 yielded \$4,371,508 in gold and 4,396,826 ounces of silver. Placer mines yielded \$45,850 in gold and 548 ounces of silver.

The total production of Colorado from 1858 to 1929 has been: Gold, \$710,961,413; silver, 653,549,064 ounces.

EASTERN OR APPALACHIAN STATES

The mine production of gold in the Eastern or Appalachian States increased from 1,697.82 fine ounces, valued at \$35,097, in 1928, to 1,779.86 fine ounces, valued at \$36,793, in 1929.

Pennsylvania produced \$17,282; Tennessee, \$11,680; North Carolina, \$5,054; Georgia, \$2,574; and Alabama, \$203.

The placer mines (nine in number) yielded \$3,216, of which \$1,928 was from Georgia, \$1,085 from North Carolina, and \$203 from Alabama.

Siliceous gold ore in Georgia and North Carolina, amounting to 3,010 tons, yielded \$894 in bullion and some gold in untreated concentrates. The copper ore and copper concentrates from pyritiferous magnetite ore yielded \$32,683, of which \$3,721 was from North Carolina, \$17,282 from Pennsylvania, and \$11,680 from Tennessee. The gold output from placers and gold lode mines in the Eastern States in 1929 was only about one-eighth of that obtained from base ores.

The mine output of silver was 111,660 ounces, or 9,140 ounces more than in 1928. Only 13 ounces of silver was contained in placer bullion and 12 ounces in bullion from lode gold mines.

Copper ores yielded 105,663 ounces, of which Tennessee was credited with 81,281 ounces, North Carolina with 21,102 ounces, and Vermont with 3,284 ounces. The silver credited to Pennsylvania, 5,972 ounces, came from pyritiferous magnetite ore of the Cornwall mine.

IDAHO

In 1929, according to C. N. Gerry, of the United States Bureau of Mines, Idaho's output of gold was valued at \$418,545 and that of silver, \$5,017,877. There was a decrease of \$15,158 in the production of gold and an increase of 416,073 ounces in the production of silver over that of 1928.

Gold decreased from \$433,703 in 1928 to \$418,545 in 1929, as a result of the inactivity of the South Park dredge at Featherville, Elmore County. The output of gold from the Idawa mine in Boise County was considerably less than that of 1928, but the decrease was

partly offset by the fact that the Gold Hill & Iowa mine was again productive under the management of the Talache Mines (Inc.). Of this total the placer gold amounted to \$85,373, against \$169,336 in 1928; the gold won by three dredges was valued at \$60,143, a decrease from \$133,418 in 1928.

Dry or siliceous ore produced more gold than any other kind of ore, or \$265,221; gold in copper ore was valued at \$49,021; lead-zinc ore, \$13,972; lead ore, \$4,824; and copper-lead ore, \$134. In 1929 more than 83 per cent of Idaho's gold came from placers and from siliceous gold ore. The largest producers of gold were the Idawa Gold Mining Co. at Placerville, the Gold Hill & Iowa mine at Quartzburg, the Mackay Metals (Inc.) at Mackay, the Idaho Gold Dredging Corporation at Centerville, and the Unity Gold Mines Co. at Warren.

The silver output was 9,414,403 ounces, an increase of 416,073 ounces. Most of the silver, or 4,706,508 ounces, came from lead ore. Lead-zinc ore supplied 2,590,083 ounces; copper-lead ore, 2,017,528 ounces; copper ore, 68,410 ounces; siliceous ore, 30,450 ounces; zinc ore, 5 ounces; and placers, 1,419 ounces. The Coeur d'Alene region (Shoshone County) alone produced 8,776,726 ounces of silver. The largest producers of silver were the Bunker Hill & Sullivan, Sunshine, Hecla, and Morning mines, all in the Coeur d'Alene region.

There were 198 mines producing during the year, of which 51 were placer mines and 147 lode mines.

MONTANA

Montana's mine output of gold in 1929, according to C. N. Gerry, of the United States Bureau of Mines, was valued at \$1,131,949, which is close to the output of the last four years, but only about one-fourth the production of 1916. Of this total, \$1,119,615 came from lode mines and \$12,334 from placers. There was a decrease of about \$65,000 in gold from lode mines, due chiefly to the lessened output of the New Gould mine in Lewis and Clark County and the Anaconda group at Butte. A marked improvement of about 80 per cent in quantity was shown, however, in the output of gold from the Spring Hill mine near Helena. No dredges were operated and the placer output was \$5,550 less than that of 1928. As in recent years, the gold was recovered chiefly from copper ore, which was the source of \$641,466. Gold from other sources was as follows: Siliceous ore, \$350,883; lead-zinc ore, \$81,139; zinc ore, \$27,869; lead ore, \$16,238; copper-lead ore, \$1,720; copper-lead-zinc ore, \$300; and placers, \$12,334. More than 74 per cent of the gold was produced by the Anaconda group of mines at Butte, the Liberty-Montana mine near Jefferson Island, the Spring Hill mine south of Helena, and the New Gould property north of Helena.

The output of silver increased decidedly, from 10,853,276 ounces in 1928 to 12,716,977 ounces in 1929, of which nearly 78 per cent was recovered from the mines at Butte. Silver from lead-zinc ore decreased considerably and that from lead ore and copper-lead ore was less than in 1928. There was, however, three times as much silver produced from siliceous ore, and a large increase in that produced from copper ore and zinc ore. Copper ore supplied the largest quantity of silver, 7,289,007 ounces; lead-zinc ore, 2,327,493 ounces; zinc ore, 1,576,332 ounces; siliceous ore, 1,198,531 ounces; lead ore, 163,300 ounces; copper-lead ore, 144,382 ounces; and copper-lead-zinc

ore, 17,861 ounces. More than 71 per cent of the silver was produced from the Anaconda group of mines, the Butte & Superior mine, and the Block P property of the St. Joseph Lead Co.

There were 252 producing mines, of which 212 were lode mines and 40 placer properties.

NEVADA

The mine output of gold in Nevada in 1929, according to Victor C. Heikes, of the United States Bureau of Mines, was valued at \$3,384,211, a decrease of \$236,622 compared with \$3,620,833 in 1928. The Robinson (Ely) district, credited with \$1,321,640, exceeded all other districts in the State in gold output, chiefly on account of the production of copper ore from the mines at Ely, but decreased \$121,262 in the value of the gold compared with 1928. The value of the gold output from the Jarbidge district in 1929 was \$581,741, an increase of \$162,439 compared with 1928. The Tonopah district was next in rank with an output of gold valued at \$414,628, slightly less than in 1928. The Goldfield district yielded \$263,947 in gold, largely recovered from old tailings, which is \$15,426 less than in 1928. The Gold Circle district produced only \$120,078 in gold, or a decrease of \$49,692 compared with 1928. The largest gold producers were the Nevada Consolidated Copper Co., Elko Mines Co., the Bradshaw (Inc.), which worked the Goldfield Consolidated tailing dump, and Consolidated Coppermines, all of which produced more than 10,000 ounces each. Four other properties produced between 5,000 and 10,000 ounces. Siliceous ore mined in the State yielded \$1,874,019 in gold; copper ore, \$1,349,616; lead ore, \$66,416; copper-lead ore, \$15,033; lead-zinc ore, \$35,365; and placers, \$43,762.

The mine production of silver in 1929 was 4,923,526 ounces, or 558,048 ounces less than in 1928. The mines of the Tonopah district in Nye and Esmeralda Counties produced 1,965,595 ounces, or an increase of 65,280 ounces over 1928. The output of silver from ore mined in the western part of the district in Esmeralda County in 1929 increased 78,734 ounces, but that from ore mined in the eastern part of the district in Nye County decreased 13,454 ounces compared with 1928. The Comstock district, Storey County, again showed a decrease in its output of silver from 37,679 ounces in 1928 to 32,399 ounces in 1929. More than half of the silver yield of the State, or 2,828,537 ounces, came from siliceous ore, the greater part of which was treated by cyanidation. Silver from lead ore amounted to 671,478 ounces; lead-zinc ore, 675,679 ounces; copper-lead ore, 491,175 ounces; copper ore, 255,254 ounces; zinc ore, 378 ounces; and from placers, 1,025 ounces. The largest silver producer was the Tonopah Mining Co., followed closely by the Tonopah Extension Mining Co. Next in rank were the Bristol Silver, Tonopah Belmont, Consolidated Cortez, Treadwell Yukon, Combined Metals, and Betty O'Neal.

There were 338 mines producing in Nevada in 1929, of which 15 were placer mines and 323 were lode mines.

NEW MEXICO

The production of New Mexico metal mines in 1929, in terms of gross value of recovered and estimated recoverable content of gold, silver, copper, lead, and zinc at average yearly prices, according to

Charles W. Henderson of the United States Bureau of Mines, was \$24,473,675, as compared with \$18,815,863 in 1928.

Copper is the metal of chief value produced in New Mexico. In 1929, the gross value of recoverable copper was \$17,198,238. The gold output in 1929 was \$727,162 and the silver 1,161,988 fine ounces. Comparative figures for 1928 were \$680,360 in gold and 827,793 fine ounces of silver. Copper ore in 1929 yielded 49 per cent of the gold and 24 per cent of the silver; lead-zinc ore yielded 47 per cent of the gold and 65 per cent of the silver; dry and siliceous ores yielded nearly 3 per cent of the gold and nearly 5 per cent of the silver; lead ore yielded nearly 4 per cent of the silver; copper-lead ore yielded nearly 2 per cent of the silver.

Placer gold mines recovered only 80 ounces of gold and 4 ounces of silver. San Miguel County produced 47 per cent of the gold, Hidalgo 30 per cent, Grant 19 per cent, and Catron 2 per cent. San Miguel County produced 42 per cent of the silver, Grant County 35 per cent, Hidalgo 15 per cent, Catron nearly 4 per cent; the remainder of the silver came from the 12 other counties.

OREGON

The gold yield from ore and gravels treated in Oregon in 1929, according to Victor C. Heikes, of the United States Bureau of Mines, was valued at \$353,323, of which 45 lode mines yielded \$106,354 and 111 placer operations \$246,969. Compared with the gold yield in 1928, this was an increase of \$127,355, or 56 per cent, due almost entirely to the continuous operation of a dredge installed in 1928 on Foots Creek in Jackson County and an increased output from the Buffalo lode mine in Grant County. Three dredges were in operation in 1929 in Baker, Grant, and Jackson Counties. In order of output the leading gold-producing counties were Jackson, Grant, Josephine, Curry, and Baker. Dry gold ore and tailings yielded 29 per cent; copper ore, 1 per cent; dredges, hydraulic mines, and surface placers, 70 per cent of the total gold output of Oregon in 1929. A small amount of gold came from drift placers.

The production of silver in Oregon was 30,009 ounces, valued at \$15,995, a decrease of 915 ounces in quantity and \$2,096 in value compared with 1928. Lode mines yielded 28,231 ounces and placer operations 1,778 ounces. The output of silver was entirely from placer bullion and gold and copper ores; no silver ore was treated for silver alone. Of the total silver output for the State in 1929 dry gold ore and tailings yielded 71 per cent and copper ore 23 per cent; dredges, hydraulic mines, and surface placers yielded 6 per cent.

SOUTH DAKOTA

According to Charles W. Henderson, of the United States Bureau of Mines, the Homestake gold mine, at Lead, S. Dak., which from 1875 to 1928 has yielded gold-silver bullion and concentrates valued at \$219,603,290 and paid in dividends \$54,101,284, produced bullion bars in 1929 the proceeds of which was \$6,517,838 and paid dividends of \$1,758,120. The ore is first treated by amalgamation; sands and slimes are then treated by cyanidation; the tonnage treated in 1929 was 1,437,935 tons. There are 15,176,740 tons of ore blocked out and remaining in the mine. The only other producing company in

South Dakota in 1929 was the Keystone Consolidated Mines (Inc.), which operated the Bullion-Columbia-Holy Terror group, in Pennington County, near Keystone. The ore from this mine is both oxidized and sulphide, carrying gold. The sulphide minerals are pyrite and arsenopyrite.

The total gold production of South Dakota from 1875 to 1929 has been \$280,805,722; of silver, 7,664,828 ounces.

TEXAS

Metal mines in Texas, according to Charles W. Henderson, United States Bureau of Mines, produced in 1929, in terms of recovered and recoverable metals, 1,020,516 fine ounces of silver and \$26,439 in gold. Cyanide precipitates and lead concentrates produced at the Presidio mine, at Shafter, contained 974,049 fine ounces of silver and 1,279 fine ounces of gold. Comparative figures for 1928 were 1,212,340 fine ounces of silver and 489 fine ounces of gold. The Hazel mine, near Van Horn, Culberson County, reopened by the World Exploration Co. in 1928, continued in 1929 to ship siliceous sulphide ore carrying copper and silver, and during the year began construction of a 100-ton flotation mill, which was 80 per cent completed on December 1. A flotation mill was under construction at the Bonanza mine, near Sierra Blanca, Hudspeth County. Lead-silver ore from the Alpine district, dry silver ore and copper-silver ore from the Allamoore district, and copper-silver ore from Sierra Blanca district was shipped to the El Paso smelter.

The total output of gold from Texas mines from the first year of available Government production records—1885 to 1929, inclusive—mostly from the Presidio mine, has been \$91,425, and for silver 22,383,284 fine ounces.

UTAH

The value of the metal output of Utah was \$95,985,201 in 1929, an increase of \$16,726,297 over 1928, according to C. N. Gerry, of the United States Bureau of Mines. The increase was due chiefly to the much larger output of copper and partly to increases in the output of gold, silver, lead, and zinc. The value of the silver, however, was less than that of 1928.

The gold output was valued at \$4,969,915, an increase of \$575,914 over that of 1928. Separated as to source, copper ore was most important, containing gold valued at \$2,839,340; lead-zinc ore supplied \$790,450 in gold; siliceous ore, \$747,757; lead ore \$566,863; copper-lead ore, \$24,549; and placers \$956. The four largest producers of gold were the Utah Copper, United States Smelting, Refining & Mining, Park Utah Consolidated, and Eureka Standard Cos.

The silver production in Utah increased from an output of 17,072,852 ounces in 1928 to 17,592,396 ounces in 1929. Separated as to source, the silver came principally from lead-zinc ore, which supplied 7,912,883 ounces, and from lead ore, which supplied 5,281,243 ounces; dry or siliceous ore supplied 2,714,111 ounces; copper ore, 1,608,570 ounces; copper-lead ore, 75,574 ounces; and placers, 15 ounces. The Tintic district, in Juab and Utah Counties, produced 6,272,456 ounces, against 6,232,602 ounces in 1928. The Bingham district of Salt Lake County produced 4,644,955 ounces against

3,728,942 ounces in 1928, and the Park City region, in Summit and Wasatch Counties, 6,157,501 ounces, against 6,745,826 ounces in 1928. The five largest producers of silver were the Silver King Coalition, Tintic Standard, Park Utah Consolidated, United States Smelting, Refining & Mining, and Utah Copper Cos.

There were 130 producing properties in 1929, 3 of which were placers and 127 lode mines.

WASHINGTON

The output of gold in Washington in 1929, according to C. N. Gerry, of the United States Bureau of Mines, had a value of \$76,898, the smallest output since 1884, and a decrease of \$260,269 from the production of 1928. Most of the gold of the State, or \$66,576, came from siliceous gold ore; copper ore supplied \$3,911 in gold; lead-zinc ore, \$166; siliceous silver ore, \$88; lead ore, \$43; and placers, \$6,114. An unusually large decrease in gold was recorded from the Republic district as the Consolidated Mining & Smelting Co. at Trail, British Columbia, purchased comparatively little siliceous ore from Washington, and the output of the Boundary Red Mountain mine in Whatcom County was distinctly less than in 1928. Crude ore supplied \$11,718 in gold, ore treated by amalgamation \$55,335, and concentrates \$3,731. Since 1860 Washington has produced \$30,334,997 in gold. The three largest producers of gold in Washington in 1929 were the Boundary Red Mountain mine in Whatcom County, the Old Republic mine at Republic, and the dredge of the Kittitas Gold Mining Co. near Liberty, Kittitas County.

The output of silver in 1929 was 47,182 ounces, a decrease of 52,556 ounces, due to the large decrease in the shipments of siliceous ore from the Republic district. Of the total silver, 32,377 ounces had its source in copper ore, 6,932 ounces in siliceous ore, 4,003 ounces in lead ore, 3,772 ounces in lead-zinc ore, and placers supplied 98 ounces. Crude ore supplied most of the silver, or 25,262 ounces; concentrates, 21,679 ounces; and ore treated by amalgamation, 143 ounces. The two largest producers of silver were the Sunset mine near Index, Snohomish County, and the United Copper mine near Chewelah, Stevens County. There were 29 lode mines and only 4 placers producing in 1929.

WYOMING

Metal mines in Wyoming in 1929, according to Charles W. Henderson, of the United States Bureau of Mines, yielded 48 ounces of gold and 26 ounces of silver. The gold and 7 ounces of silver came from the Atlantic City district, Fremont County. The remainder of the silver came from small shipments of copper ore from the Muskrat Creek district, Goshen County, and the Kuny Hills district, Platte County.

Refinery production of gold mined in the several States and Territories in 1928 and 1929, with the increase and decrease in each for the latter year

Gold and Silver Used in Industrial Arts in the United States During the Calendar Year 1929

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the United States assay office at New York and the mint at Philadelphia hold the foremost places; consequently the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1929, with the classes of material from which they were made:

Gold and silver issued for use in the industrial arts during the calendar year 1929

Item	Issued by—	Gold	Silver
		<i>Value</i>	<i>Fine ounces</i>
Bullion.....	Mints and assay offices.....	\$47,741,187	1,593,515
Bullion in various forms.....	Private refineries and dealers..	8,162,480	40,688,223
United States coin ¹	Banks, etc.....	1,000,000	77,344
Total.....		56,903,667	42,359,082
Old jewelry, plate, scrap, etc., contained in private refineries' and dealers' returns, and that returned to monetary use.		32,030,531	11,381,523
New material.....		24,873,136	30,977,559

¹ Estimated; the quantity of silver is equal to 100,000 silver dollars.

Gold furnished for use in manufactures and the arts, and classification of the materials used, since 1880

Losses and Gains on Withdrawn Coin

The loss on face value of gold coin totaling \$1,677,501 withdrawn from circulation during the fiscal year 1930 was \$13,713.60, of which \$2,999.48 was reimbursable from the appropriation provided for that purpose. The loss on face value of silver coin totaling \$4,347,694.55 withdrawn from circulation was \$403,012.13, all being reimbursable from the appropriation provided. The reimbursable loss, provided for by appropriation, on minor coin totaling \$409,972.04 withdrawn during the fiscal year was \$17,188.96.

Standard silver dollars (mutilated) purchased as bullion for use in the manufacture of subsidiary silver coin, since 1883

¹ Louisiana Purchase Exposition.

² Lewis and Clark Exposition.

³ Panama-Pacific International Exposition coins (octagonal, \$75,450; round, \$75,500).

⁴ Includes \$25,042.50 Panama-Pacific International Exposition coins.

⁵ McKinley memorial coins.

⁶ Grant memorial coins.

⁷ Includes \$500,565 National Sesquicentennial of Signing Declaration of Independence.

NOTE.—Coinage during the early years not susceptible of exact statement by years of actual date on coin, the registry of annual coinage being of coin delivered by the coining departments of mints within the given year, and these deliveries not having been invariably completed within the year of the date of coin, as now required.

Combined silver coinage¹ of the mints of the United States, by denominations and calendar years, since their organization

¹ No net change during year in amount of earmarked gold coin held for foreign account.

NOTE.—The number of standard silver dollars coined to June 30, 1930, was 840,505,332, which, added to the Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 841,652,191. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000, the net export from November, 1919, to July 20, 1920, in movement due to the high price of silver, was 28,287,142; those melted under the terms of the Pittman Act of April 23, 1918, totaled 270,232,722, those melted otherwise (mutilated, etc.) since 1883 numbered 222,478, and the number of Hawaiian dollars melted to June 30, 1930, was 455,329, a total disposition of 301,692,671, leaving in the United States on June 30, 1930, 539,959,520 standard silver dollars and 310,978,375 dollars in subsidiary silver coin.

¹ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

² This total includes \$36,675,623 of gold deposited for redemption of Federal reserve notes, and \$28,226,376 deposited for redemption of national-bank notes, against which \$20,758,412 of notes in process of redemption are a charge, \$1,900 deposited for retirement of additional circulation (act of May 30, 1908), and \$7,691,499 deposited as a reserve against postal savings deposits.

³ Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.

⁴ Population of continental United States (estimated) June 30, 1930, 123,156,000; June 30, 1929, 119,788,000; Oct. 31, 1920, 107,491,000; Mar. 31, 1917, 103,716,000; June 30, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

⁵ Includes United States money in circulation in foreign countries and the amount held by the Cuban agency of the Federal Reserve Bank of Atlanta.

⁶ Does not include gold bullion or foreign coin other than that held by the Treasury, Federal reserve banks, and Federal reserve agents. Gold held by Federal reserve banks under earmark for foreign account is excluded, and gold held abroad for Federal reserve banks is included.

⁷ These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

NOTE.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$156,039,088 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible under the terms of the Federal reserve act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful money has been deposited with the Treasurer of the United States for retirement of all outstanding Federal reserve bank notes. National-bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national-bank notes secured by Government bonds.

Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year since 1873

¹ Harmonized with revised data appearing in the annual report of the Secretary of the Treasury for the fiscal year 1928, pp. 552-553.

Cash Holdings of National Banks

Reports to the Comptroller of the Currency of cash holdings on June 30, 1930, of the national banks (7,252) give—

Gold coin.....	\$14, 748, 000
Gold certificates.....	34, 373, 000
All other cash.....	293, 386, 000
Total.....	342, 507, 000

Cash Holdings of Nonnational Banks

Reports to the Comptroller of the Currency of 16,827 reporting banks, other than national banks, as of June 30, 1930, show cash holding as follows:

Gold coin.....	\$9, 855, 000
Gold certificates.....	13, 649, 000
All other cash in vault.....	182, 885, 000
Not classified.....	317, 074, 000
Total.....	523, 463, 000

Stock of Money in the United States December 31, 1929

On December 31, 1929, the stock of domestic coin in the United States was \$2,417,904,694, as shown in the table below:

Item	Gold	Silver	Minor	Total
Estimated stock of coin in United States Dec. 31, 1929.....	\$1, 314, 035, 521	\$844, 360, 246	\$118, 618, 922	\$2, 277, 014, 689

¹ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

² This total includes \$73,287,720 of gold deposited for redemption of Federal reserve notes, and \$27,492,412 deposited for redemption of national bank notes, against which \$39,116,868 of notes in process of redemption are a charge, \$1,900 deposited for retirement of additional circulation (act of May 30, 1908), and \$7,470,327 deposited as a reserve against postal savings deposits.

³ Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.

⁴ Population of continental United States (estimated) Dec. 31, 1929, 120,500,000; Dec. 31, 1928, 119,076,000; Oct. 31, 1920, 107,491,000; Mar. 31, 1917, 103,716,000; June 30, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

⁵ Includes United States money in circulation in foreign countries and the amount held by the Cuban agency of the Federal Reserve Bank of Atlanta.

⁶ Does not include gold bullion or foreign coin other than that held by the Treasury, Federal reserve banks, and Federal reserve agents. Gold held by Federal reserve banks under earmark for foreign account is excluded, and gold held abroad for Federal reserve banks is included.

⁷ These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

NOTE.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$156,039,088 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful money has been deposited with the Treasurer of the United States for retirement of all outstanding Federal reserve bank notes. National bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money bonds.

NOTE.—The quantities in the column "Net imports" for both gold and silver for the years 1873-74 to 1886-87 are estimated only, deducted from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

RECONCILIATION OF GOLD STATISTICS (UNITED STATES), 1914-1928¹

Movements of gold in and out of the country, and in and out of earmark, and the total production (less consumption in industry) of gold in the United States account for the changes in total gold holdings of the country, and should be reflected in the estimate of the total gold stock of the United States, prepared monthly by the United States Treasury. The object of this study is to discover why official statistics representing these movements and transactions in gold fail to explain the changes from year to year in the gold-stock figures. Table I² opposite presents published statistics on these movements and transactions for the period of the Federal reserve system (1914-1928). If figures in this table were complete, accurate, and comparable, the changes in gold stock shown in the first column of the table would be entirely explained by the factors represented in the following columns (2 to 8). That this is not the case is indicated in column 9, which represents the aggregate annual discrepancies contained in these figures. The varying size and direction of these discrepancies over the period indicate a degree of inaccuracy so great as to throw the entire set of figures into doubt, unless the main sources of discrepancies can be located and explained. The specific purpose of this study is to discover which figures contain these discrepancies and to what such discrepancies are due. As a first step to this end, the source of each set of figures involved is stated.

Analysis of changes in monetary gold stock

^a For detailed explanation of this figure, which is derived from preceding columns, see Bulletin for December, 1928, p. 831.

^b Includes effect of earmarking operations connected with gold held abroad by Federal reserve banks.

^c December figures preliminary.

¹ Several members of the staff of the division of research and statistics and of the staff of the division of bank operations of the Federal Reserve Board were consulted for material and suggestions in connection with this study.

² An analysis of changes in monetary gold stock is presented monthly in the Federal Reserve Bulletin in the form of a table of the following type. In this table the increases or decreases in the estimated gold stock of the United States are analyzed into changes (1) in net gold imports or exports, (2) in earmarking operations (both here and abroad), (3) in domestic production, etc. Items (1) and (2) represent published statistics. With reference to item (3) the December 1928 Bulletin states, "This figure, derived from preceding columns, represents in general an excess of domestic production over domestic consumption in the arts. It is subject, however, to certain unavoidable inaccuracies in official reports of gold imports and exports."

¹ The sum of columns (2) to (9) equals (1).² Sources: Columns 1, 2, and 3, Annual Report of the Federal Reserve Board, 1929, pp. 81 and 82. Columns 5 and 7, Annual Report of the Director of the United States Mint, 1929, pp. 38 and 39. Column 8, *ibid.*, p. 58 and corresponding tables in earlier reports.*Sources of Gold Statistics*

The stock of gold figure is computed by the United States Treasury and published monthly on the Circulation Statement of United States Money. It is the sum of an estimate prepared by the United States Mint of the stock of gold coin in the United States, plus figures representing the actual amount of gold bullion (including foreign gold coin) held by the Treasury and by the Federal reserve banks and agents, as shown in their respective operating accounts.

Gold earmarked for foreign account and gold held abroad by the Federal reserve banks are from the accounts of the Federal reserve banks and published in the annual report of the Federal Reserve Board.

The gold production figures are compiled from the operating accounts of the United States mints and assay offices, and from reports furnished annually to the Director of the Mint by all private refiners in the United States of gold from the mines. The yearly receipts of domestic gold product at the mints, assay offices, and private refineries are combined to secure the annual gold production figure for the United States.

The consumption of new gold in the industrial arts is an estimate prepared by the United States Mint Bureau and published in the annual report of the director. It is calculated by subtracting from the aggregate issues of gold for industrial use by the mints and assay offices, by the private refineries and by the dealers in gold, the old jewelry, plate, scrap, etc., returned to these institutions from use in the arts. (The dealers in gold, hereafter understood to include manufacturers who use gold (optical, dental, and jewelry companies, etc.) as well as the private refineries, report annually to the Director of the Mint.)

Gold import and export figures are compiled by the Bureau of Foreign and Domestic Commerce of the United States Department of Commerce from declarations of shippers or importers at ports of entry and embarkation. They appear in various publications of that bureau.

It is now proposed to examine carefully the basis of the above items to discover the source of the discrepancies under consideration. Beginning with the gold stock item itself, attention is especially called to the fact that the gold coin part of the stock figure is an estimate while the gold bullion part is the sum of items, from the operating accounts of the Treasury and the Federal reserve banks,

representing the actual gold bullion holdings of these institutions. It is feasible thus to measure directly the stock of monetary gold bullion, since it is held entirely by the Treasury and the Federal reserve banks, in contrast to the stock of gold coin, which is held not only by the above institutions but also by numerous commercial banks and by the public. An explanation of the estimate of gold coin is made first because such explanation will eliminate all coin items from further consideration in this study. This is true because the coin estimate is derived directly from the published figures representing the movements and transactions in gold coin; the changes in the gold coin stock are consequently exactly explained by the aggregate statistics representing such movements and transactions; there are no discrepancies between the changes in gold coin stock and such transactions and movements in gold coin, and no problem with reference to gold coin.

ESTIMATE OF THE STOCK OF GOLD COIN

To secure the estimate of gold coin for any given date, the stock of gold coin at the end of the preceding period is adjusted for the net import or export of gold coin, for the changes in the amount of gold coin earmarked for foreign account, for the amount of coinage from bullion and withdrawal from coinage for melting during the period, including an estimate of the amount melted for use in the industrial arts.³ In other words, the estimate of the stock of gold coin is a derived figure; it is, therefore, apparent that there can be no discrepancies between changes in the gold coin stock estimate and the statistics of movements and transactions from which such changes are derived. Consequently, the changes in the coin stock estimate or other coin figures in Table I can not contain any of the discrepancies which this study is endeavoring to explain (except such as are contained in the bullion figure also).⁴ All discrepancies in Table I must, therefore, be contained in the bullion figures and the problem of this memorandum is concerned with gold coin only in its effect on the stock of gold bullion figures through the minting of bullion into coin and the melting of coin into bullion for monetary purposes. If the items of Table I representing aggregates of coin and bullion are separated into coin and bullion items respectively, and shown in separate tables with the figures for the melting of coin and the coining of bullion at the mints included in both tables (but with reverse signs, since the melting of coin represents a deduction from coin stock but an addition to bullion stock, and the minting of coin the reverse) the items in the coin table (Table II) "wash," while the whole of the discrepancies shown in Table I appear in the bullion table (Table III). Our problem is thus reduced to a gold bullion problem only.

³ This estimate has no direct bearing on the results sought in this study, but is properly discussed in this connection. The estimate has been placed by the United States Mint at \$3,500,000 yearly since 1885. With reference thereto the annual report of the Director of the Mint for 1907, pp. 85-86, states:

"Dr. James P. Kimball, Director of the Mint in 1885, made a revision of the estimates of his predecessor as to the amount of gold coin consumed in the arts. He estimated \$30,000,000 for the years from 1874 to 1880, inclusive, and the following years to 1885, as follows:

1881.....	\$3,300,000
1882.....	2,700,000
1883.....	2,500,000
1884.....	4,875,000
1885.....	5,000,000

"These estimates were based upon the result of a census taken by addressing inquiries to all known manufacturers of gold and silver wares.

"After 1885 Dr. Kimball dropped his estimate to \$3,500,000, investigation indicating that bar gold was being used more generally by manufacturers. In 1893 the Director of the Mint dropped this estimate to \$1,500,000, and it remained at that figure until 1903 when it was restored to \$3,500,000 as the result of extensive inquiries begun in 1900 and reported in detail in the reports of that and succeeding years. It should be understood that this is the only annual deduction made from the stock to cover not only losses by melting on the part of jewelers, but destruction and disappearance by every means except natural abrasion, which is computed at the time of recoinage. As the latest investigations reveal an actual reported consumption of about \$3,000,000, it is concluded that an average allowance of \$3,500,000 for the 10 years during which the estimate was only \$1,500,000 per year is not too great. It is also considered that \$5,000,000 more in the aggregate should be deducted for the years prior to 1885. During that time it is known that bars had not entered so generally into consumption as they have since. It has always been the practice for small manufacturers and dentists to use coin freely, while the large manufacturers and makers of dental supplies who buy the bullion in quantities prefer bars."

It will be noted from the above that at the time this estimate was made there was "an actual reported consumption in the arts of about \$3,000,000." The reported consumption in the arts during recent years has been only about \$500,000. However, the list of dealers and manufacturers reporting, contains only the larger concerns, and the great number of small dealers from whom it is impractical to secure reports doubtless the only deduction from the stock of gold coin estimate to cover losses and destruction of all kinds, it is probably not too high. Based on information available, we estimate that at present not more than \$1,000,000 in gold coin is used annually in the arts. The annual estimate of \$3,500,000 stands as the deduction from coin stock for use in the arts plus destruction and disappearance by every means except natural abrasion.

⁴ The only actual interchange between bullion and coin is through melting of coin into bullion and minting of bullion into coin, but classification errors in import and export figures interchanging coin and bullion would produce errors in both types of figures. This is discussed more fully on page 132 of this study.

Column 8, *ibid.*, p. 58, and similar tables in earlier reports.

THE RESULTS OF THE STUDY

There is now presented Table IV embodying the results of this study to eliminate the discrepancies appearing in Table III. The various separate adjustments and corrections which have been applied to Table III to secure Table IV will be found in Table V. The adjustments there shown are results of checking, analyses, or calculations appearing in Tables VII to XIV. Each of these tables with resulting adjustments is discussed in detail as presented.

Since the presentation of the analysis of the data in Table III to discover the adjustments necessary to secure Table IV requires a number of tables and somewhat lengthy explanations it has seemed desirable to present also, for the sake of simplification, a single table showing for a representative year, complete unadjusted data, adjustments, and adjusted results. The year 1924 has been chosen for presentation since it contains most types of adjustments made. In this table, as in Tables III and IV, changes in the bullion stock figures with adjustments are set off and balanced against changes in all other factors (imports and exports, earmarked bullion, production, consumption, etc.), with adjustments. By following through Table VI the reader can view the entire process of deriving the stock figure and of adjusting the various factors which account for changes in stock.

THE STOCK OF GOLD BULLION IN THE TREASURY

As already stated, the figures for gold bullion held by the Treasury, used in the stock of gold figures, are taken from the accounts not of the Bureau of the Mint but of the United States Treasurer. The items on which these Treasurer's figures are based, however, are supplied to the Treasurer's office by the several mints and assay offices. The figures thus furnished are not always in exact accord with the accounts of the mint by reason of differences in accounting procedure; furthermore, they are not interpreted in exactly the same manner by

the Treasurer as by the mint. The differences as between the published gold bullion stock figures of the Treasurer and of the mint for December 31 of each year during the period under discussion appear in column 3 of Table VII. (Column 4 of Table VII shows the corrected Treasurer's bullion stock figures. See page 126 for further explanation.)

TABLE VI.—*Change in stock of gold bullion in the United States, and determining factors, calendar year, 1924; published figures and adjustments*¹

[In millions of dollars]

Change in stock of gold bullion:	
Treasury gold bullion stock—	
Dec. 31, 1923, as published	3,221.8
Dec. 31, 1924, as published	3,324.7
Correction on 1924 figure due mainly to omission of uncurrent coin held	.4
Corrected Treasury gold bullion stock, Dec. 31, 1924	3,325.1
Increase in Treasury gold bullion stock during 1924	103.3
Federal reserve banks gold bullion stock—	
Dec. 31, 1923, as published	81.3
Dec. 31, 1924, as published	80.6
Decrease (—) in Federal reserve banks' gold bullion stock during 1924	— .7
(1) Corrected increase in total gold bullion stock during 1924	102.6
Factors determining change in stock of gold bullion:	
(2) Gold earmarked by the Federal reserve banks, increase or decrease	0
(3) Gold held abroad for the account of the Federal reserve banks, increase or decrease	0
Gold coin held by Treasury for melting—	
Dec. 31, 1923	.3
Dec. 31, 1924	.4
Increase in gold coin held for melting during 1924	.1
Gold coin melted during 1924	2.8
Gold coin minted during 1924	—206.0
(4) Net minting during 1924	—203.1
Total domestic gold production during 1924, as published	52.3
Less production in Philippine Islands, during 1924	—1.7
Less one-half change in private refinery stocks during 1924	.6
(5) Adjusted total domestic gold production	51.2
Private refinery domestic receipts	34.8
Private refinery foreign receipts	16.4
Private refinery secondary receipts	13.0
Total receipts of private refineries	64.2
Losses—	
Receipts from private refineries by mints and assay offices (exclusive of old material from plants working only old gold, included by mint in published receipts from refineries)	—62.2
Private refinery gold used in arts	—1.6
Decrease in private refinery stock	1.3
Total reported outgo of private refineries	—62.5
(6) Error or unidentified outgo of private refineries	—1.7
Mint bars issued to industrial arts—	
As published	(60.5)
As corrected—	
At New York for gold cash	—51.2
At New York for bullion	—4.8
At Philadelphia for gold cash	—2.1
At Philadelphia for bullion	— .9
At Denver for bullion	— .1
At San Francisco for gold cash	— .7
At San Francisco for bullion	— .1
Corrected mint bars issued to industrial arts	—59.9
Private refinery issues to arts as used in published figures	(1.9)
Private refinery issues to arts as corrected	—1.5
Dealers' refinery issues to arts—	
As published	(0)
As corrected	—2.3
Total bullion used in arts, as corrected	—63.7

¹ Revised figures for all years. Published gold stock estimate used unrevised figures previous to 1916 because revised figures were not available monthly.

² Minus quantities indicate Treasurer's figure larger than mint figure.

³ \$1,200,000 (No. 4) error; \$700,000 (No. 2) error.

⁴ Uncurrent coin held not included in mint figure.

Sources: Column 1, Annual Report of the Director of the United States Mint, 1929, p. 109, and similar reports for earlier years. Column 2, unpublished records of Treasurer of the United States.

The numbers in parentheses to the right in column 3, Table VII, refer to the predominating cause in each case of the differences involved. These causes are enumerated below:

1. Uncurrent (light weight) gold coin held is included in some years by the mint in its stock of bullion figure but is omitted from that item by the Treasurer in all years.

2. During the early years covered by this study part of the silver bullion purchased, and so shown in mint accounts, was included as gold bullion by the mints and assay offices in reports to the Treasurer.

3. The mint and assay offices record on their books as assets the total value of bullion which has been assayed, whether it has been entirely paid for or not, whereas only such part of gold bullion assayed, for which actual payments have been made are reported to the Treasurer's office as assets pertaining to his accounts.⁵ This difference constitutes a lag between the figures of the mint and of the Treasurer (since under the mint practice gold may be entered as an asset on the mint accounts at a date earlier than it is so recorded on the accounts of the Treasurer) and is the explanation of the large difference shown for 1916 in Table VII.

4. The differences in 1914 and 1923 are mainly due to the fact that the published figures of the mint on total gold bullion assets failed to include gold bullion in transit, while the Treasurer's figures did include such bullion.

Classes 1 and 2 of the differences described above obviously constitute errors in the Treasurer's stock of monetary gold figures and the amounts have been applied to Table VII, column 2, as adjustments on the published stock figures, Table VII carrying the stock adjusting details intermediary between Tables III and IV.

The proper treatment of the class 3 difference discussed above, however, is open to question. If the stock of gold bullion is to be defined as "all bullion physically in and/or at the disposal of the Treasury and Federal reserve banks" the third difference should be applied as a correction on the stock of gold bullion figures. However, inasmuch as the focal point of this study is the stock of monetary gold and monetary gold bullion is that which is legally owned by the Treasury and Federal reserve banks and agents, there should be no correction to the stock of gold bullion figure for this difference. The class 3 difference as well as the class 4 difference, therefore, represent merely necessary adjustments to the mint's stock figures to secure agreement with the Treasurer's figures. These two classes of discrepancies have, therefore, been applied at a point later in this study (Table XIV), where such adjustments are required.

POSSIBLE OTHER STOCKS OF GOLD

The question may be asked whether there do not exist in the United States stocks of gold bullion in addition to stocks held by the Treasury and the Federal reserve banks. Such stocks, if they exist, would be in gold reduction plants or private refineries, in the hands of gold dealers or manufacturers, or in banks other than the Federal reserve banks. The private refineries and other reduction plants do hold small stocks of gold. These stocks are not included in the published stock of monetary gold figure presumably because they are not monetary gold under the Treasurer's definitions; furthermore, no monthly figures therefore are available. The stocks of private refineries, however, have been taken into account at a later point in this study in the proper connection. No statistics of gold stocks held by gold dealers and manufacturers are available, and any such stocks held must be negligible in amount since even private refiners' stocks are comparatively small. As to possible bank gold stocks, discussion with various authorities best able to express judgment on the subject (including officials of the Federal reserve system, and of the office of the Comptroller of the Currency) indicates that practically no gold bullion is or has been held by banks other than Federal reserve banks in the period under discussion.

EARMARKED GOLD AND GOLD HELD ABROAD FOR THE ACCOUNT OF THE FEDERAL RESERVE BANKS

These figures, covering a class of transactions readily and definitely identified in the operating accounts of the Federal reserve banks, are not open to question; moreover, the discrepancies appearing in Table III have been traced to other sources.

⁵ For further explanation of this difference see p. 134. Since July, 1922, the New York assay office has changed its practice in this regard and reports to the Treasurer's office as assets, total assayed bullion, whether paid for or unpaid, but the amounts involved since that date are negligible and consequently have not been taken into account in this study.

MINTING AND MELTING BY THE MINTS

Attention was called to the fact that certain amounts of uncurrent or light-weight gold coin are usually held by the mint awaiting melting. Such coin has been withdrawn from circulation, is really bullion, and has consequently been used in Table VII as a correction on the bullion stock figures. The net melting and minting item derived from published mint data must likewise be adjusted for uncurrent coin held, but this should be adjusted by the increases or decreases in the amounts so held, since it is the changes in such amounts which are represented in the bullion stock increases and decreases shown in Table IV.⁶

GOLD PRODUCTION

These figures are compiled from the accounts of the United States mints and assay offices, and from reports received annually by the Director of the Mint from private refineries. There are only a dozen bullion-producing plants (refineries working newly mined materials) in the United States. The reports of these refineries, presumably made up from the accounts of such companies,⁷ show, among other things, their receipts of domestic gold bullion. The domestic receipt figures each year shown on the private refinery reports are carefully compared and checked with reports (annual, to the Director of the Mint) from the smelters and preliminary gold-working plants which receive new gold at various stages of its refinement. The aggregate production figure compiled from the two sources (mints and private refineries) of total domestic gold is compared with figures compiled by the United States Bureau of Mines, from reports direct from the mines, showing production of recoverable gold at the mines. This results in the careful tracing of all new gold from mines to final product (bullion).

In view of the limited size of the gold-refining industry, the thorough knowledge of the field by the Mint Bureau and the Bureau of Mines, and the checking of the figure between the Mint Bureau and the Bureau of Mines, it would seem certain that the gold production figure may be accepted as very nearly accurate.⁸

The production of gold in the Philippine Islands (shown in Table V) has been deducted in Table IV from the published production figures of the mint as shown in Table III, because the imports from these islands are included in the import statistics of the Bureau of Foreign and Domestic Commerce, and hence should not be included in this study as part of domestic production.

⁶ This adjusted net melting and minting item should rightfully also have been used to derive the coin stock estimate. Since the unadjusted item was used, changes in the uncurrent coin held on Dec. 31 of each year have been applied to the official coin estimate in the following table:

Estimated gold coin stock in the United States, official figures, with corrections for uncurrent coin held
[In millions of dollars]

Dec. 31—	(1) Official estimate of stock of gold coin	(2) Increase or decrease(—) in uncurrent coin held	(3) Corrected estimate of stock of gold coin	Dec. 31—	(1) Official estimate of stock of gold coin	(2) Increase or decrease(—) in uncurrent coin held	(3) Corrected estimate of stock of gold coin

Source: Columns 1 and 2, unpublished records of the mint.

⁷ See Table VIII in which private refinery reports are balanced; small discrepancies are carried into Table IV.

⁸ The Bureau of Mines also publishes a figure representing the production of gold at the mines. In the 21-year period from 1905-1925, inclusive, the largest variation between the two sets of figures representing gold production was \$3,000,000 in 1907 (on the basis of a total production of \$90,400,000 mint figure). This includes lag during the period of reduction from ore to bullion. The average yearly difference in the two sets of figures in the 21-year period, which does not cancel out as lag, is about \$600,000 only.

The published gold production figures represent total unrefined domestic gold reaching refineries (United States mints and assay offices or the private refineries) within a given year, whereas to eliminate time lag and make the figures comparable to other mint data used, the production figures should represent the total of new domestic gold received at the mints and assay offices within a given year, whether received directly from the mines or smelters or indirectly through the private refineries. (Approximately the entire receipts of the private refineries are purchased by the United States mints after refinement.) Increases in the year-end stocks of private refineries represent gold received within a given year which did not reach the United States mints that year, and decreases in these stocks represent the reverse. The total amount of such changes, therefore (shown in Table VIII, column 7) are prorated roughly between the domestic receipts, the foreign receipts, and the old-gold receipts of private refineries in proportion to the relation of each of these to total receipts. One-half of the changes from year end to year end are subtracted from the domestic production figures in Table III to secure the adjusted production figures in Table IV.

PRIVATE REFINERY DATA

Private refinery data have been used in securing production figures and will be used in further calculations in this study. Table VIII has been compiled to indicate the degree of accuracy of the private refinery figures by balancing their receipts against their outgo. Aggregate errors in these figures have been included in Table IV.

Table VIII is compiled as follows: Column (1), private refinery domestic receipts; plus (2), private refinery foreign receipts; plus (3), private refinery secondary receipts; equals (4), total receipts of private refineries; minus (5), receipts from private refineries by mints and assay offices (less receipts of refined old material from plants working secondary (old) material only, but classified in mint records with other private refinery product; minus (6), private refinery gold used in arts; plus or minus (7), decrease (or increase) in private refinery stocks from one year end to the next; equals (8), total reported outgo of private refineries; plus or minus (9), balancing item—error or unidentified outgo, i. e., difference in reported receipts and outgo of private refineries carried to final balancing Table IV, item 6.

TABLE VIII.—Receipts and outgo of private refineries in the United States, 1914-1928. Published or reported figures with required adjusting balances

¹ Published figures reduced by small amounts representing receipts of old material from plants working only old gold. See Table V, item 7d.

² Reported figures adjusted for omissions, the only important ones being in 1914, 1915, and 1916.

Sources: Columns 3 and 6, unpublished reports of private refineries. Columns 1, 2, and 7, Annual Report of the Director of the United States Mint, 1929, p. 36, and similar tables in earlier reports. Column 5, *ibid.*, p. 43, and similar tables in earlier reports.

CONSUMPTION OF NEW GOLD IN THE INDUSTRIAL ARTS

The published figures are calculated as follows: Estimate of bars issued by the mints and assay offices for use in the arts, plus bullion issued in various forms by private refineries, dealers (and manufacturers) for use in the arts,⁹ plus estimate of United States coin melted for use in the arts; result, total gold consumed in the arts, minus old jewelry, plate, scrap, etc., received by private refineries and dealers and that returned to the United States mints and assay offices; result, new material used in the arts.

Table IX shows these items yearly for the period 1914 to 1928 as published, except the gold coin item, which has been omitted since this study has eliminated all coin items and is concerned only with bullion.

Table X calculated in the same manner, shows these various items (coin item omitted) yearly for the period 1914 to 1928, as adjusted by this study. Adjustments were all in the nature of corrections to the figures as follows (see Table V):

(a) The mint old gold item (column 5, Tables IX and X) includes an addition to the published figures of a small amount of old receipts from plants that work secondary (old) material only; (b) certain omissions were found in the refinery figures, the most important being omissions of old materials received in 1914, 1915, and 1916; (c) only two important adjustments have been made in the figures for mint bars issued for use in the arts, i. e., the published figure for 1914 includes \$7,800,000 exported to Canada, and for 1926, \$7,500,000 representing gold bars issued to the Federal reserve banks for monetary use, both of which have been deducted in adjusted figures.

Column 1 of Table X has been built up in Table XI. Total bars issued in exchange for bullion (usually scrap or old gold) at New York, Philadelphia, San Francisco, and Denver (these bars are usually commercial bars);¹⁰ minus such part of the above at New York as are known to be certificate bars;¹⁰ plus total bars sold for gold cash at the four above-mentioned offices; minus such part of the last-mentioned item at New York as are reported by purchasers as for export or as go to a Federal reserve bank; minus such part of second item above at San Francisco and Philadelphia as are judged by the Mint Bureau in Washington to be intended for export.¹¹

⁹ Issues by dealers and manufacturers as used in this study are practically identical with their receipts of old gold and consequently "wash." But the item is part of the estimate of the total gold consumed in the arts, and hence is properly considered in this connection. Previous to 1929 the mint's list of reporting dealers contained only about 50 names; in 1929 it was increased to 250 names. Dealers' reported receipts of old gold for the last five years have been:

[In millions of dollars]

1925.....	3.0	1928.....	4.9
1926.....	3.1	1929.....	5.7
1927.....	3.7		

Although the additions to the dealers' list in 1929 increased the reported old gold receipts, the incompleteness of the data even in 1929 is evidenced in the following comparison between the total of U. S. Mint bar receipts reported by dealers and the Mint adjusted estimate for mint bars issued for industrial purposes:

[In millions of dollars]

	Mint estimate	Dealers' reports
1925.....	56.2	16.8
1926.....	56.5	15.9
1927.....	51.6	17.1
1929.....	47.7	27.5

No attempt, however, has been made to increase the old gold receipts of dealers by an estimate for unreported receipts, because the reported receipts contain some duplication in the form of scrap from manufacturers. Such scrap gold would be contained in the figure for new gold issued to the arts, yet it would never have really entered the arts. No definite information as to the amount of these unreported receipts is available, but to an unknown degree it is offset by the duplication contained in reported receipts.

¹⁰ Two types of bars are issued by the mints and assay offices—certificate bars and commercial bars. Certificate bars are large, valued at about \$8,000 or more, and are seldom desired by industrial users, while commercial bars range in value from \$100 to \$5,000. Commercial bars are manufactured for the gold industrial trade, and are, generally speaking, bought entirely for such purpose.

¹¹ This judgment is made upon inspection of the monthly figures of issues and based on experience indicating that any unusually large issue is for export, i. e., that the industrial demand remains much the same from month to month or year to year. This scanning method, is probably fairly accurate, since industrial consumption in any line does not change rapidly. It will also be noted that the amounts issued for arts purposes in these cities and Denver are not large.

Sources: New York, unpublished reports received from New York assay office. Philadelphia, Denver, and San Francisco, Annual Report of the Director of the Mint, 1929, p. 40, and similar tables in earlier reports (adjusted). (See text, p. 129.)

The important item in the consumption figure is the issue at New York. In the classification of issues at that office the destination of all certificate bars is definitely known to be monetary or for export. On the other hand, it is quite certain that all commercial bars go to the arts, since an extra charge is made for these bars, which are desired by dealers and industrial users because of their smaller size and high degree of fineness. This extra charge precludes their purchase for monetary export purposes. Should any of them be exported for arts purposes, which those conversant with the situation doubt, it would not constitute a duplication in this study, as any such export is not included in the export figure compiled in this study and used in Table IV. This last point will not be entirely clear until the calculation of a new import and export figure is explained later in this study.

Although the figures for the "consumption of new bullion," while based on operating accounts, are dependent on certain classifications and judgments, no possibility of significant error seems to exist. Moreover, as compared from year to year, the series of consumption figures appear reasonable. The figures for 1919 and 1920, the post war boom years, are high; for 1921, a depression year, the figure is low; the figures for 1922–1928, inclusive, do not vary greatly. As between the accuracy of the corrected consumption figures and the published import and export figures (the correctness of all other items having already been fairly well substantiated in this study), one is led to attribute most of the discrepancies remaining in Table III after adjustments already made in Table IV, to the net import and export items, instead of to consumption, for if we assume the import and export figures to be correct, a set of figures are secured for industrial "consumption of new material" which are obviously unreasonable, as follows:

[In millions of dollars]

1914	22.7	1922	9.5
1915	23.4	1923	23.2
1916	73.9	1924	6.0
1917	— .6	1925	38.4
1918	32.4	1926	18.1
1919	62.3	1927	— 4.4
1920	65.6	1928	1.3
1921	— 4.7		

NET GOLD IMPORTS AND EXPORTS

Several elements in published import and export figures are open to question. The discrepancies in these figures, however, are in considerable degree of an unavoidable nature.

(1) The records are compiled from declarations of shippers at ports of entry and embarkation, for statistical purposes only. In this situation the same compulsion toward accuracy does not exist as would were they recorded for the collection of a duty or tax.

(2) The gold contained in imported base bullion and ore is an estimate and undoubtedly contains some error.

(3) There is possible the reporting of gold coin as gold bullion and vice versa.¹² Such interchange of items between bullion and coin would not only cause discrepancies in the gold coin estimates because of the manner in which these estimates are derived, but also in the set of bullion figures under discussion as well. Four types of errors are possible, i. e., (a) gold bullion imports classed as gold coin, or (b) vice versa; (c) gold bullion exports classed as gold coin, or (d) vice versa. If, for instance, the (a) error occurs, not only would the gold coin stock estimate be too high by the amount of the import, since the import (reported as coin) would be added to the estimate as it stood at the end of the previous period, but there would be no increase in any factor appearing in Table III to explain the increase in the gold bullion stock figure which would automatically occur when the gold bullion import reached the Treasury or a Federal reserve bank and was entered on the books of the receiving institution as an increase in gold assets.

(4) There is also the matter of smuggling across the Mexican border. Since the beginning of the World War it has been illegal under Mexican law to export Mexican gold coin. A comparison of the figures on the import of foreign gold coin from Mexico into the United States, as compiled from customs declarations, and the receipts of Mexican coin, as reported by the United States Mint, in the last eight years, apparently indicates a large amount of smuggling. The two sets of figures are as follows:

[In millions of dollars]

Year	United States mint receipts	Imports compiled from customs declarations	Difference	Year	United States mint receipts	Imports compiled from customs declarations	Difference
1921.....	11.9	.2	11.7	1925.....	1.6	-----	1.6
1922.....	20.3	-----	20.3	1926.....	23.3	15.4	7.9
1923.....	10.7	.8	9.9	1927.....	27.8	-----	27.8
1924.....	17.5	-----	17.5	1928.....	18.6	.1	18.5

(5) There is the further matter of time lag between the receipts of imports or exports at the customs boundaries and the date at which such imports or exports become a part of or are deducted from the gold shown on the books of the Treasurer or the Federal reserve banks. As to lag in receipts or shipments—

(A) By the Federal Reserve Banks: It is believed that no lag occurs except possibly in shipments to and from Canada.

(B) Eventually affecting the records of the Office of Treasurer of United States: (a) *Imports (coin or refined bullion always) going directly to Treasury institutions.*—It is believed that no lag occurs between receipts at customs boundaries and entry on the Mint Service books. But lag between receipt by the mints and entry in the Treasurer's books does occur and will be adjusted in this study.¹³

(b) *Imports (unrefined material always) shipped directly to private gold refineries.*—It is assumed that no lag occurs between the customs boundaries and the private refineries, but lag occurs before such gold reaches the mints. Adjustment has been made for this by deducting from the foreign receipts of private refineries one quarter of the year-end changes in private refinery stocks.

(c) *Imports (unrefined material always) shipped to smelters or other preliminary gold-working plants (i. e., not refineries).*—Such gold is partially worked before

¹² A number of such errors were discovered by Mr. George E. Roberts in 1907 when as Director of the Mint he made a study of the original records of the Department of Commerce on gold imports and exports. See Annual Report of the Director of the Mint, 1907, pp. 66-92.

¹³ See pp. 125, 126, 134 and 135, and Table XIV, columns 4 and 5.

shipment to a refinery. This constitutes a lag between the customs boundaries and receipt at a private refinery, for the adjustment of which no data are available. The lag, however, can hardly be a million dollars in any year, since the receipts of foreign gold by private refineries are moderate in amount and fairly regular, ranging from twelve to nineteen million dollars in value annually in the period under discussion, at least half of which is received direct by the private refineries.

NET IMPORT AND EXPORT FIGURES ADJUSTED TO TREASURER'S STOCK FIGURES

A set of net export and import figures for gold bullion (including foreign coin) has been built up from the records of the mints and assay offices, of the Federal reserve banks, and of private refineries (all figures from the operating accounts of these institutions except "consumption") and substituted in Table IV for the net import and export figures appearing in Table III (figures compiled from customs declarations). This set of figures represents net imports and exports on the Treasurer's gold stock basis. The series has been built up in two parts, a net figure for imports of foreign bullion and coin (Table XII) and a net figure of imports or exports of United States mint bars. (Table XIII.)¹⁴

The net import figure for foreign bullion and coin is calculated as follows:

Table XII.—Column (1), foreign gold bullion and coin purchased by the mints and assay offices; plus (2), foreign gold bullion imported by private refineries, corrected for one-fourth of the change in private refinery stocks;¹⁵ plus or minus (3), the increase (or decrease) from year end to year end in the stock of foreign gold bars and foreign coin held by Federal reserve banks; plus (4), the gold production of the Philippines which is included in the import figures of the Bureau of Foreign and Domestic Commerce and hence included here; minus (5), foreign gold coin minted and exported by United States Mint for which gold was supplied by mint; (6), result, net import of foreign gold bullion and coin.

TABLE XII.—*Net imports of foreign gold bullion and coin into the United States, 1914–1928, as compiled for this study (mint weight basis)*

[In millions of dollars]

Calendar year	(1) Treasury receipts of foreign gold	(2) Private refinery receipts of foreign gold	(3) Increase or decrease (–) in Federal re- serve bank holdings of foreign gold	(4) Philippine production of gold	(5) Gold coin minted and exported by Treasury (–)	(6) Net import of foreign gold
1914	19.6	19.3	-----	1.1	-----	40.0
1915	250.5	17.7	-----	1.3	–2.5	267.0

1928	-392.0	50.1	0	-117.5	73.7	-385.7

¹ Signs are reversed to secure comparability with Table IV.

² Larger than the published figures by the following amounts in the calendar years indicated.

[Millions of dollars]

1914	26.5	1920	1.0
1917	6.6	1926	115.3
1919	0.8	1927	175.4

The large discrepancies in 1926 and 1927 are due to issues direct to the Federal reserve banks or on Federal reserve bank certificates of deposit, which do not show in the published reports for the calendar years, and which appear in the reports for fiscal years as "transfers." The 1914 difference was an export direct from Denver, which was not included in published figures.

Sources: Column 1, unpublished accounts of the United States Mint. Column 2, Table XI, last column. Column 3, Annual Report of the Director of the United States Mint, 1929, p. 43, and similar tables in earlier reports except 1914 and 1915 from unpublished accounts of the United States Mint. Column 4, confidential reports of the Federal Reserve Bank of New York. Column 5, Federal Reserve Board Form 44a and correspondence with Federal Reserve Bank of New York (confidential).

Table XIV is compiled as follows: Net figures for foreign gold and mint bars' the results of Tables XII and XIII appear as columns 1 and 2, respectively. The total net export and import items, so far calculated (column 3) must be brought to the same basis as the stock figures in Table IV, i. e., Treasurer's basis, if calculated export and import figures are to be inserted in that table. These calculated figures are now on the basis of the mint figures used in Tables XII and XIII. But the basis of these figures differs from the basis of mint figures shown in Table VII with which the Treasurer's stock figures were compared. The mint basis of figures in Table VII is the accounting basis while the basis of those in tables XII and XIII is the mint weight basis, upon which basis the mint source classification is made.

For the sake of clarity, the differences between the two mint bases and the Treasurer's basis are tabulated below:

Mint weight basis includes (1) the value of all gold assayed whether paid for or still unpaid.¹⁶

Mint accounting basis includes (1) all outstanding advances on gold unassayed; (2) the value of all gold assayed, whether paid for or still unpaid, less the amount of advances made thereon in prior years.

¹⁶ This basis automatically includes prior year advances, since such advances are represented in assayed bullion.

Treasurer's basis includes (1) all outstanding advances on gold unassayed; (2) all payments on gold assayed, less the amount of advances made thereon in the prior year, plus the outstanding unpaid amounts on assayed bullion at the close of the previous year.

If the calculated net import and export figures are to be brought eventually to the Treasurer's basis they must first be brought to the mint accounting basis by adjustment for the changes in outstanding advances on December 31 of one year as compared with those for the preceding December 31. These changes are shown in column 4 of Table XIV.¹⁷ The calculated net import and export figures may now be brought to the Treasurer's basis by applying such differences between the mint accounting basis and the Treasurer's basis (Table VII) as have not already been applied as corrections on the stock figures of Table III (as discussed on pp. 125 and 126) to secure the figures in column 4, Table VII. These differences are shown as column 5 of Table XIV.

The final results of the calculations of Tables XII, XIII, and XIV, appear in column 6, of Table XIV, and represent net imports and exports of gold bullion and foreign coin on the Treasurer's gold stock basis. By insertion with other adjusted figures in Table IV, the discrepancies of Table III are practically wiped out. Sources of the small remaining differences are as follows:

- (1) Figures on sweeps and waste, etc., in the mint were not included.
- (2) In 1917, 1918, and 1919 the gold assets of the Federal reserve banks for a date slightly earlier than December 31 were used, as a separation between foreign and domestic gold was not obtainable for December 31.
- (3) Increase or decrease in private refinery stocks for 1914, 1915, and 1916 are not obtainable from published sources.

TABLE XIV.—*Total net import or export of gold bullion and foreign gold coin to or from the United States, 1914-1928, as compiled for this study (Treasurer's stock basis)*

[In millions of dollars]

1927	158.9	-385.7	110.4	.2	.4	111.0
1928	113.2		-272.5	.3	.0	-272.2

¹ The amount by which itemized receipts of the Mint totaled too large. Impossible to find in which item or items error occurred.

Sources: Column 1, Table XII, column 6; column 2, Table XIII, column 6; column 4, unpublished accounts of the United States Mint; column 5, Table VII: column 3, changes in errors (3) and (4).

¹⁷ The basis of mint figures used for compiling the production figures and the mint old-receipts figures used in "consumption" are also on the mint weight basis, but since only comparatively small advances are made on domestic or old receipts, the basis correction as a whole is applied to the import and export figures.

REPORT OF THE DIRECTOR OF THE MINT

NET IMPORT AND EXPORT FIGURES CALCULATED FOR COMPARISON WITH FIGURES
COMPILED FROM CUSTOMS DECLARATIONS

It is desired to secure net import and export figures for comparison with figures compiled from customs declarations. Amounts representing lag¹ between receipt at the customs boundary and entry on Treasurer's books must therefore be eliminated from our calculated figures, since customs declaration figures can not be expected to include this lag. For this purpose Table XV is presented below:

TABLE XV.—Total net import or export of gold bullion and foreign gold coin to or from United States on Treasurer's stock basis, 1914-1928, further adjusted for comparison with published figures compiled from customs declarations

[In millions of dollars]

Calendar year	(1) Adjusted total net import or export (-) (Treasurer's stock basis)	(2) Increase or decrease (-) in unpaid assayed gold representing imports	(3) Increase or decrease (-) in 2 per cent of unassayed gold representing imports	(4) Total net import or export (-) adjusted for comparison with customs declarations	(5) Customs declarations net import or export (-)	(6) Discrepancies, including small unascertainable lag ¹
1914.....	-16.1			-16.1	-16.7	-0.6
1915.....	278.9			278.9	281.1	2.2

¹ Minus quantities represent either omission of imports, or exports reported too high; plus quantities, the reverse.

Sources: Column 1, Table XIV, columns 6. Column 2 and 3, unpublished accounts of the United States Mint. Column 5, Annual Report of the Director of the United States Mint, 1929, p. 58, and similar tables in earlier reports.

² The following table gives an estimate of the amounts representing total ascertainable lag in figures compiled from customs declarations. Columns 1 and 2 have been taken from Table XV; column 3 represents increases or decreases in advances on unassayed gold bullion imports. The presentation of the figures in the first three columns as representing imports is based on the assurance given by the Mint Bureau that any large advance or payment may always be taken to refer to imports. Column 4 is one-quarter of the change in private refinery stocks, which is a lag adjustment to the foreign receipts of private refineries. Column 5 shows the total ascertainable amounts representing lag.

[In millions of dollars]

Calendar year	(1) Increase or decrease (-) in unpaid assayed gold representing imports	(2) Increase or decrease (-) in 2 per cent of unassayed gold representing imports	(3) Increase or decrease (-) in advances against unassayed gold representing imports	(4) One-quarter decrease or increase (-) in private refinery stocks from year end to year end	(5) Total ascertainable amount representing lag
1916 ¹					
1917.....	18.1	0.6	29.8		48.5
1918.....	-18.1	-.6	-29.8		-48.4

¹ Approximately no lag in 1914 and 1915.

Sources: Column 1, Table XV, column 2; column 2, Table XV, column 3; column 3, unpublished accounts of United States mints and assay offices; column 4, Table VIII, column 7.

Table XV is compiled as follows:

Column 6 of Table XIV is repeated as column 1. The lag between receipt of unassayed gold at the mint and its inclusion in the Treasurer's stock figure represented by advances thereon has already been adjusted in Table XIV, column 4, and lag between the receipt of foreign gold bullion by the private refineries and its inclusion in the mint stock figure (weight basis) has been adjusted in Table XII, column 2. The amounts of ascertainable lag still remaining in column 1 are:¹⁰ Column 2, the amount of unpaid assayed bullion representing imports, i. e., all large single items, and column 3, the portion (2%) of refined but of unassayed bullion imports on which advances were not made. Column 4 is obtained by adding columns 2 and 3 to column 1, and gives a net import and export figure which is very nearly comparable with the figures compiled from customs declarations, presented in column 5. Column 6 indicates the amount of the discrepancies in the customs declaration figures as compared with our calculated figures (which include small unascertainable lag).

THE COURSE OF GOLD AND SILVER

The following review of the London market during the calendar year 1929 is from the annual circular issued by Messrs. Sharps & Wilkins, bullion brokers, of London, England:

GOLD

The various movements of gold which have directly affected the reserves of the metal held by the central institution against the issue of notes have provided several points of interest during the past year, as will be seen from the following report of the market.

The features with regard to the increase and decrease in the stocks in London which characterized the year 1928 have been repeated in the main during the period under review, the first six months witnessing an accretion to the reserves, which was not only completely nullified during the later period, but resulted in an actual loss on balance for the year.

The comparatively protracted periods during which certain foreign exchange rates in terms of sterling hovered perilously near to the gold export point, and the sluggish response frequently exhibited by rates to shipments actually undertaken, caused the gold position here to be viewed at times with no small amount of anxiety, which culminated in the heavy withdrawals of the metal from London during the latter half of the year.

In spite of the fact that the practice of not disclosing in the published daily statements either the source from which bar gold or sovereigns are received by the Bank of England, or the destination of the amounts withdrawn from that quarter, has still persisted, it has been far less difficult than was the case in the previous year, to arrive at the source of origin of the various demands which have been received, either for the weekly arrivals of gold offered for sale in the open market, or the destination of the amounts which have been withdrawn from the central institution for export. The movements of certain exchange rates on London left no doubt as to which center or centers were able to acquire gold, with the result that the "unknown buyer" has figured far less prominently during the period under review. On certain occasions mysterious amounts of gold, which have not appeared under the heading of "Imports" in the board of trade returns, have been either offered for sale in the open market, or acquired by the Bank of England direct, but it was generally supposed that these transactions merely represented the "release" of gold previously purchased and retained in this country as a temporary measure.

The last weekly bulletin issued by the Bank of England, dated December 26, 1928, showed that the stock of gold held in the reserves amounted to £153,783,646, which was approximately the same as that held at the end of April, 1925, when the return to a gold standard was made effective. Although during the first three weeks of January the Bank of England was unable to secure any part of the rather moderate arrivals of gold from South Africa, due chiefly to purchases for an unknown destination which was later considered to be probably on account of the National Bank of Belgium, owing, however, to the release of some two million sovereigns which at the end of 1928 had been set aside for the Swiss National

¹⁰ The nonobtainable lag remaining in column 1 is the lag between receipts at the customs boundaries and at the private refineries, of gold shipped to smelters or other preliminary gold-working plants. As already pointed out, this can hardly be \$1,000,000 in any one year.

Bank, the reserves of gold held by the central institution showed a slight appreciation. This position, however, was shortlived, as towards the end of the month substantial shipments of gold were made from London to New York, which continued until the 6th of February. Approximately £6,000,000 was withdrawn from London during this period, of which slightly over £1,000,000 was secured in the open market and the balance bought from the Bank of England.

As a result, the stock of gold held by the central institution depreciated to slightly under £150,000,000, the minimum laid down by the Cunliffe committee, for the first time since December, 1927. The increase in the Bank of England rate from $4\frac{1}{2}$ to $5\frac{1}{2}$ per cent on the 7th of February, which was rendered necessary by the substantial withdrawals of gold, proved an effective check and no further shipments took place to America for the next four months. Although the sterling rate on New York continued to rule near gold-export point, by paying slightly over its statutory buying price, the Bank of England was able to secure some £7,750,000 or approximately 70 per cent of the weekly amounts offered for sale in the open market during the period.

The receipt of approximately £3,700,000 in sovereigns from the following sources: Holland £1,000,000, South Africa £1,250,000, Australia £1,000,000, South America £400,000, together with the release of about £1,000,000 in bar gold previously set aside for an undisclosed account, which was subsequently understood to be the Hungarian National Bank, provided an additional accretion to the reserves of the central institution. As the result, the gold stocks in London appreciated steadily during this period, culminating in the weekly return issued on June 12, which showed that the reserves of the metal had reached the figure of £163,241,482, representing a net influx of some £10,000,000 since the commencement of the year, or £9,335,167 since the return to a gold standard in 1925. This proved to be the highest figure recorded in the weekly returns and, compared with the peak of 1928, showed a decrease of slightly over £10,000,000.

Although toward the end of May movements adverse to sterling occurred in both the New York and Berlin exchange rates, which depreciated to, and remained either at or below the point at which exports of gold from this country were rendered profitable on an arbitrage basis, the fact that, with the exception of a small amount exported across the Atlantic at the commencement of June, no other shipments were made at this time to either quarter, induced the belief that such transactions were being definitely discouraged by the central institutions concerned. Whatever justification there may have been for this opinion it was, however, short-lived, as by the middle of June heavy withdrawals of gold commenced to be made to both centers. In the case of New York the shipments continued until the early part of July, approximately £3,500,000 being withdrawn from London during this period. Of this amount about £500,000 was secured in the open market, the balance being bought from the Bank of England. With the sterling rate on New York improving and remaining above gold point, no further shipments were made until the middle of the following month, when the increase from 5 to 6 per cent in the rediscount rate of the New York Federal Reserve Bank was reflected in the depreciation of sterling in terms of the dollar. Shipments of gold were again resumed, slightly less than £3,000,000 being secured for that quarter, of which about £1,500,000 was purchased in the open market and the balance from the central institution. The total amount exported to America, including the shipments which took place during January and February, was about £12,500,000.

The rise in the Bank of England rate from $5\frac{1}{2}$ to $6\frac{1}{2}$ per cent on September 26 provided an effective check to further shipments in that direction.

The outflow of gold from this country to Germany continued with slight checks until the end of September, during which period approximately £17,000,000, in addition to the usual requirements for trade, was withdrawn to that quarter, of which about £2,500,000 was secured in the open market and the balance from the Bank of England.

The Reichsbank again accepted delivery of the gold at its branches in Bremen, Hamburg, and Cologne. This enabled shipments to be made on an arbitrage basis, which on certain occasions would have been impossible if delivery in Berlin had been insisted upon.

In addition to the exports to both Berlin and New York, the sharp appreciation of the franc in terms of sterling which occurred in the middle of July induced a further drain of gold to Paris, which continued with only slight interruptions until the beginning of December. During this period approximately £31,000,000 was exported from London to this center, of which only about £1,500,000 was purchased in the open market and the balance from the Bank of England. The

reason why a much smaller proportion of the total amount exported to France was secured in the open market, as compared with both Germany and America, is explained by the fact that the consignments to Paris were largely sent by air, which necessitated an early start from London in order to arrange the delivery, on the same day on the other side, and any gold purchased in the open market would not have been available in time. In fact, it was not until the railway companies offered certain facilities, at the commencement of November, that France appeared as a serious competitor for the weekly arrivals of the metal from South Africa. A feature in connection with the outflow of gold to the two European centers referred to above was the stubbornness on the part of the sterling rate to show any favorable response to the large shipments undertaken, which only tended to emphasize the general anxiety existent at that time as to the gold position in London.

Notwithstanding the keen competition from outside sources, by continuing to bid over its statutory buying price the Bank of England was able to secure a fair share of the amounts of gold offered for sale each week in the open market. In spite of this and the receipts of important amounts of sovereigns chiefly from South Africa, Australia, and the Argentine, the heavy drain of the metal referred to caused a substantial reduction in the stocks held in the reserves of the central institution, which by the 2nd of October had fallen to the low level of £129,120,543, as shown in the weekly return issued on that date. This figure represented a net efflux of about £24,000,000 since the commencement of the year and showed that gold to the extent of approximately £34,000,000 had been withdrawn from the Bank of England for export during the period of four months commencing at the middle of June. This proved to be the lowest point recorded during the year, and although the outflow of gold to France continued for the next six weeks, chiefly due to further substantial arrivals of sovereigns from the quarters already mentioned, a gradual improvement in the general gold position took place with a slow but steady increase in the reserves of the metal.

In the early part of December all important outside inquiries ceased, but a further amount of about £1,500,000 was exported to Paris during the last days of the month.

In addition to the continuous inflow of sovereigns, the lack of competition for the open market gold enabled the Bank of England to secure the balance of the amounts offered for sale after the usual requirements for India and the trade had been satisfied. The position was further improved by the steady appreciation of the sterling rate in terms of the dollar, which reached a point at which under certain conditions the exportation of gold from New York was rendered possible, with the result that on the 21st of December approximately £4,500,000 in bar gold was received from that quarter, and we believe that this is the record amount ever purchased by the Bank of England in any one day. By the end of the year the reserves of the central institution had appreciated to £145,960,000, representing a net efflux of about £7,824,000 since the commencement of the year and of £7,946,000 since April, 1925.

The total exports of gold on balance to France, Germany, and America during 1929 were as follows: France, £33,000,000; Germany, £18,000,000; America, £8,000,000.

In addition to the above amount France imported from America about £13,000,000, but Germany, on the other hand, exported approximately £9,000,000 to New York.

The importation of sovereigns, which acted as such an important counter to the heavy drain of the metal during the latter half of the year, amounted to £20,783,748, which represents an increase of £9,002,673 when compared with the receipts of the previous year. Although sovereigns were imported from both South Africa and Australia during 1928, the increase is largely due to the receipt of about £7,717,200 from the Argentine, no shipments having been made from that quarter to London during recent years. In view of the weakness of the Argentine peso, moderate shipments were made to this country from April onwards, but the principal exportations of gold coins at that time were directed to New York, and it was not until the latter part of the year that the important consignments were received in London. The closing of the conversion office for gold exports by the Argentine Government, prompted by the heavy efflux of gold, has stopped, at any rate temporarily, the further exportation of sovereigns.

The imports of refined and unrefined gold from South and West Africa for disposal each week have amounted to £33,481,545, which represents an increase of £8,620,000 in comparison with 1928, when the receipts from South Africa

were affected by the heavy shipments of sovereigns to Brazil and the Argentine. Another factor has been the reduction in the exports of South African bar gold to India when compared with last year. Further, the weakness in the Australian exchange and the consequent discount of the sovereign has induced the Indian market to satisfy part of its requirements by importing gold coin from this quarter.

Of the weekly arrivals of gold, the Bank of England has secured approximately £18,000,000, which represents a much higher percentage than in the previous year.

While the Bank of England is compelled to buy all bar gold offered to it on the basis of 77s. 9d. per ounce standard, which is roughly equivalent to 84s. 10d. per ounce fine, there is no reason why this institution, if it thinks fit, should not bid slightly above the statutory buying price for gold offered for sale in the open market. The greater part of the gold secured from this source during the past year has been obtained in this manner. The exact motive which prompted its entry into the market as a competitor appears to be somewhat obscure as it frequently happened during the latter part of the year when keen competition existed for the weekly arrivals of gold from South Africa, that, although the Bank of England was able to secure a portion of the amounts offered, this did not in any way reduce the total taken for export, as the balance of the orders was withdrawn from the central institution, resulting on several occasions in a net loss on the day.

The following are the approximate rates at which gold arbitrage operations are likely to take place between England and the following countries:

	Imports	Exports
United States ¹ -----	\$489. 00	\$485. 00
Germany ² ----- reichsmarks --	20. 51	20. 35½
France ² ----- francs --	124. 54	123. 88

The above rates are calculated on large shipments, but the question of interest and charges for services allowed for in the above rates are by no means uniform. Although the sterling rate on New York in December did not reach the figure of \$489 mentioned above, the importation of gold from that quarter was rendered possible by the fact that certain institutions appear to have been prepared to eliminate the question of interest during the period of transit.

SILVER

So far as the various operations which have taken place are concerned, with the return to more normal conditions the silver market during 1929 has produced fewer points of predominating interest when compared with recent years. The most important feature has undoubtedly been the steady decline in price throughout the period under review, resulting in a depreciation of 5½d. from 26¼d. per ounce standard, the quotation on 7th, 10th, 12th, and 14th of January, to 21¼d. per ounce standard on 30th of December. The latter constitutes a new low record for silver, the previous figure being 21¼d. per ounce standard, quoted on the 2d of January, 1903.

The range in price of 5½d. per ounce standard compares with 2¼d. per ounce standard in 1928. With the exception of two occasions, namely, 1st of February and 15th of May, when the cash quotation was quoted at a premium over that for forward delivery, the rate for prompt has ruled either the same or at a discount throughout the remainder of the year, with the latter predominating. In spite of the fall in rates the oversold position in London was never really important. On the other hand a very substantial China bull account has existed, the prolongation of which every two months, together with the accumulation of stocks due to the decreased demand for export at certain times of the year, has been responsible for maintaining a discount on cash for long periods at a time, which represents one of the features of the past year.

During the last 10 years the abnormal conditions created by the late war, which were responsible for raising the price of silver to exaggerated levels, have ceased to operate, and as the result a gradual reversion to the pre-war level of rates has taken place. Although the substantial decline registered during the past year is probably merely a continuation of the process of adjustment to normal conditions, at the same time a depreciation in price of approximately

¹ Per £100.

² Per £1.

20 per cent from slightly over 26d. per ounce standard, which may be regarded as a fair pre-war level, seems to warrant some special explanation.

From the various details available, it seems reasonable to suppose that the total supplies of silver during the period under review, from ordinary production and also from such outside sources as the demonetization of currency, can be estimated as approximately the same as in 1928. The absorption of the metal by China compares very favorably with the record figures of the previous year and the requirements for general trade and coinage purposes will probably be found to show no important reduction. India, on the other hand, has failed to maintain its consuming capacity and, although the total amount of silver used from internal and external sources shows only a comparatively moderate reduction, this is chiefly due to the attraction of the depreciation in price acting as a stimulant to the demand from that quarter. As the requirements of silver by China are less influenced by the question of price, we are inclined to think that it is the Indian position which has been partly responsible for the failure to maintain rates throughout the past year. The demand had already commenced to be adversely affected by the failure of certain of the winter crops and the weakness in the rupee rate and the knowledge that the Indian mint were erecting a refinery in Bombay for the purpose of dealing with their surplus stocks of rupees, which was common talk in the bazaars for some time before it became an accomplished fact, left no doubt as to the intention on the part of the Government to continue the sales of silver, which tended to create in India a pessimistic feeling toward the ability to maintain the price.

Another important contributory factor to the depreciation in the price of silver is to be found in the practice, which has become more or less general, of demonetizing or debasing currency, which has not only deprived silver of one of its chief pre-war uses, but has also released large quantities of the metal for marketing purposes. In our annual circular dated January 13, 1927, we stated that "any attempt by the Government (of India) to sell silver or any announcement that silver will be sold at any price in the neighborhood of current levels would most adversely affect the rate. Already the price has fallen from 30d. to 24d. per ounce standard chiefly in anticipation of such a contingency and already the savings of millions of people of India are thereby depreciated by nearly 25 per cent. Any drastic selling of silver of large quantities would cause a violent depreciation in the price, for there is no more sensitive market in existence than that of silver."

In its issue of January 9, 1930, the London Times, after referring to the effect that the fall in the price of silver has had upon the economic conditions in China, continues as follows: "Obviously, a violent fall like this is bound to have a bad effect upon international commerce, until the necessary adjustments of silver prices of goods have been made; the fall in the gold value of silver will cause a rise in the silver prices of goods. This unhappy development is an object lesson to those who would lightly uproot old-established monetary practices, for the fall in silver is due not so much to increased production from the mines as to the demonetization of silver and the debasing of silver coinage, particularly the abandonment of silver and the adoption of the gold standard by India, which has made that country a big seller of silver, as we foreshadowed would be the case when the gold decision was made."

At the end of 1928 the quotations were 26 $\frac{3}{4}$ d. per ounce standard and 26 $\frac{1}{2}$ d. per ounce standard for cash and forward deliveries, respectively. After remaining steady at about this level during the first half of January, due to a fair demand from India for shipment, sales of silver by China predominated, causing a setback to 26d. per ounce standard. With a resumption of buying by the Indian bazaars and some supporting orders from America, the price again improved until 26 $\frac{1}{2}$ d. per ounce standard was quoted on the 1st of February.

The demand having been temporarily satisfied, resales by China on an unwilling market caused a reaction to 25 $\frac{1}{2}$ d. per ounce standard by the middle of February, when renewed buying by China after the New Year holidays, together with some inquiry from India for shipment, induced a recovery to just over 26d. per ounce standard by the end of the month. Quiet and somewhat restricted conditions prevailed during March, with prices showing little variation. The weakness in the yen rate induced a certain amount of buying by Chinese operators, but, with little competition, orders were easily filled by sales from America and the Continent. At this point a definitely easier tendency set in, which continued throughout April and May until the level of 24d. per ounce

standard was reached on the 4th of June. During this period Chinese operations continued to be chiefly influenced by the movements in yen, and although dealings took place both ways, with the weakening of the Shanghai exchange rate, sales predominated.

With the depreciation in the rupee rate which commenced in April, the demand from India for shipment became very much reduced and the general bearish feeling in the bazaars, stimulated by the opening of the Government refinery in Bombay in May, was reflected in this market by considerable selling for forward delivery. Sales of silver on continental account were rather less conspicuous, but America, influenced by the falling off in the eastern demand, sold more freely.

Throughout the remainder of June and also during July, August, and the early part of September, the price remained very steady between the level of 24d. and 24½d. per ounce standard, with the exception of three occasions, namely, 23d of July, when 23½d. per ounce standard was quoted, and 24½d. and 24¾d. per ounce standard, the prices ruling on the 19th and 20th of July, respectively. The steadier undertone to the market not only induced the covering up of oversold positions, but created an improved demand from India for shipment. The China position was dominated by the dispute with Russia concerning the management of the Chinese Eastern Railway in Manchuria, and it was the breaking off of negotiations between these two countries that was responsible for the improvement in price in July.

In the middle of September the tension between China and Russia, which had been the chief cause of the steadiness in price during the previous three months, became relaxed, and although frequent reports of conflicts between the opposing forces were received, the Shanghai rate continued to show a weaker tendency, as the result of which heavy and persistent sales were made by China. With India and America selling and only a very moderate demand from the former for shipment, rates fell to 22½d. per ounce standard, the quotation on the 8th of October, remaining at the level of about 23d. per ounce standard for the remainder of the month. The announcement at the end of September that arrangements had been made for the delivery by the mint of refined silver in Bombay, against forward sales already executed in London, merely added an element of weakness to the market, as emphasizing the fact that the policy of reducing the stocks of surplus rupees by the Indian Government was continuing in spite of the comparatively low level of price existing at that time.

During October a heavy slump occurred in the Hong Kong-London rate, due to the Government's decision to revert to a silver basis. Owing to the unsettled conditions which have existed for some time past in Hong Kong and South China generally, the natives had acquired a preference for investing their savings in notes rather than the more cumbersome and consequently less practical silver dollar. As the result the paper currency had attained an exaggerated premium, which tended to produce an adverse effect on the exports from that quarter. The Government's decision to circulate the British dollar in Hong Kong as the basis of currency, produced a large demand for these dollars, which were coined in both London and Bombay. It is estimated that out of a total of some \$20,000,000 coined, approximately \$12,000,000 were struck at the London mint, partly from the stock of surplus silver held by that institution from demonetized British coin, but chiefly from purchases in the London market, and the balance in Bombay from Indian Government silver. The above coinage transactions were chiefly responsible for the steadiness in price throughout October, but in the following month an easier tendency again set in with prices fluctuating between 22½d. and 22¾d. per ounce standard. Although a moderate demand was received from China, induced by the renewal of militarist activities in that country, the London market at this time was affected by the accumulation of stocks, as the result of increased arrivals from Mexico and the decrease in exports, which was chiefly brought about by the Indian requirements being largely satisfied by the delivery of Indian mint silver in Bombay. After remaining comparatively steady during the first half of December, with a rather better demand from the East, a sharp fall took place to the new low record price of 21½d. per ounce standard, the quotation on 30th of December. Heavy resales by China bulls, together with large offerings from America, enabled the Indian dealers, who were the only buyers in the market, to secure their silver at reduced rates. In addition, Indo-China, probably influenced by the proposed establishment of a gold standard, commenced to reduce the important amount of silver, previously purchased, by substantial resales during the last two months of the year.

Although some 3,000,000 ounces have been exported to Russia presumably for coinage purposes, no other important purchases of silver for currency by European countries have taken place during the year. The demonetization of silver coins by continental governments has continued to a reduced extent, the receipts from France, the principal source of supply, showing a reduction of approximately 2,000,000 ounces when compared with 1928.

With regard to the sales of silver by the Indian Government, about 20,000,000 ounces of unrefined silver have been shipped to London, of which approximately 13,000,000 ounces have been refined here and 7,000,000 ounces shipped to Germany in an unrefined state. Deliveries in Bombay of refined silver as the result of the opening of the mint refinery in May have amounted to about 5,000,000 ounces, to which must be added some 6,000,000 ounces used for the coinage of Hong Kong dollars. The total sales by the Indian Government during the past year have therefore amounted to about 31,000,000 ounces. Approximately 50,000,000 ounces of silver have been sold during the past year as the result of the demonetization of currency. Estimating the world's production at about 250,000,000 ounces, the total supplies of silver available from all sources have amounted to some 300,000,000 ounces or approximately the same as in 1928.

Although, in the last nine years, the average price of silver has fallen slightly over 12d. per ounce standard, the present estimated world's production of silver shows an increase of nearly 50 per cent when compared with 1921. This increase in output is largely due to the enormous production of the base metals, a large proportion of which is recovered by improved processes from ores carrying small quantities of silver.

From the details available it is estimated that the absorption of silver by China has amounted to 142,000,000 standard ounces and by India to 70,000,000 standard ounces.

After deducting the above amounts from the total supplies available, about 100,000,000 ounces have been used for trade and general purposes. This estimate does not appear unreasonable when it is considered that in America and Canada nearly 40,000,000 ounces are absorbed for trade requirements, for which the ever increasing needs of the film industry are largely responsible.

Stocks of silver in Shanghai at the end of 1929 amounted to 85,500,000 taels of sycee, 126,000,000 dollars and 7,620 bars of silver, as compared with 62,100,000 taels of sycee, 101,000,000 dollars and 5,740 bars at the end of 1928.

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, and since from daily London quotations.

Ratio of Silver to Gold, as Affected by World War

During the period December, 1916, to June, 1920, it is probable that the world's basic silver price was that of New York rather than that of London. The normal relationship between the two prices—New York a fraction of a cent below the London quotation with exchange considered—did not prevail during this period, when the average monthly New York price varied between approximately 3 cents above and 6 cents below the London price. This period appears to have been initiated by enormous coinages to meet war-time needs, and large silver shipments from the United States to the Orient. Its close was coincident with the removal of the product of United States mines from the world market, purchases under the Pittman Act of April 23, 1918, having begun in June, 1920.

The ratio of silver to gold, based on the New York price, was for this period: Calendar year 1917, 24.85; 1918, 21; 1919, 18.44; 1920, 20.27.

With the partial release during the first half of 1919 of British governmental control of gold export, the London price of exportable gold advanced above its monetary par. The ratio of silver to this

gold, based on the average London price of both metals, follows: 1919, 17.53; 1920, 20.41; 1921, 32.34; 1922, 30.11; 1923, 31.35; 1924, 30.62.

Final release of British governmental control of gold export became effective April 28, 1925, when the Chancellor of the Exchequer of Great Britain announced that the restrictions authorized by the gold and silver (export control) act of 1920 on export of gold would be discontinued from that date. This had the effect of restoring the gold standard to the United Kingdom. The example of Great Britain was followed by Australia, New Zealand, Netherlands, and the Dutch East Indies, and on June 1 by South Africa. On April 29, 1925, the London quotation on gold dropped more than 1 shilling to 84s. 11d. per fine ounce, as compared with 84s. 11.45d., mint par.

Bullion value of the silver dollar [371¼ grains of pure silver] at the annual average price of silver each calendar year since 1837

Values of foreign moneys, October 1, 1930 ¹

Pursuant to section 522, Title IV, of the tariff act of 1930, reenacting section 25 of the act of August 27, 1894, as amended, the following estimates by the Director of the Mint of the values of foreign monetary units are hereby proclaimed to be the values of such units in terms of the money of account of the United States that are to be followed in estimating the value of all foreign merchandise exported to the United States during the quarter beginning October 1, 1930, expressed in any such foreign monetary units: *Provided, however,* That if no such value has been proclaimed, or if the value so proclaimed varies by five per centum or more from a value measured by the buying rate in the New York market at noon on the day of exportation, conversion shall be made at a value measured by such buying rate, as determined and certified by the Federal Reserve Bank of New York and published by the Secretary of the Treasury pursuant to the provisions of section 522, Title IV, of the tariff act of 1930.

ODGEN L. MILLS,
Acting Secretary of the Treasury.

¹ Department circular No. 1, published quarterly.

Values of foreign moneys

Country	Legal standard	Monetary unit	Value in terms of U. S. money	Remarks
Argentine Republic	Gold	Peso	\$0.9648	Currency: Paper normally convertible at 44 per cent of face value.
Austria	Gold	Schilling	.1407	
Belgium	Gold	Belga	.1390	1 belga equals 5 Belgian paper francs.
Bolivia	Gold	Boliviano	.3650	Law of July 11, 1928. 13½ bolivianos equal 1 pound sterling.
Brazil	Gold	Milreis	.5462	Currency: Government paper convertible at 4.567 paper milreis to the gold milreis (\$0.1196), by decree of May 23, 1928.
British Colonies in Australasia and Africa.	Gold	Pound sterling	4.8665	
British Honduras	Gold	Dollar	1.0000	
Bulgaria	Gold	Lev	.0072	By law of Nov. 28 1928.,
Canada	Gold	Dollar	1.0000	
Chile	Gold	Peso	.1217	
China	Silver	Amoy	.4244	The tael is a unit of weight; not a coin. The customs unit has been the haikwan tael. The values of other taels are based on their relation to the value of the haikwan tael. The Yuan silver dollar of 100 cents is the monetary unit of the Chinese Republic; it is equivalent to .637—of the haikwan tael. January, 1930, news reports indicate import duties will be collected on a gold basis, the gold unit (unnamed) being equal to \$0.40; and the haikwan tael being initially converted at 1.5 of the new unit, but from March 16, 1930, at 1.75 of the new unit, which is being tentatively called "sun."

Monetary legislation

[PUBLIC—No. 111—71ST CONGRESS]

[H. R. 9894]

AN ACT To discontinue the coinage of the two and one-half dollar gold piece.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That hereafter the two and one-half dollar gold piece shall not be coined or issued by the Treasury.

Approved, April 11, 1930.

NORTH AMERICA

CANADA

FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production, import, export, and coinage of gold and silver, and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of interrogatories covering the points on which information is sought is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies in the form of reports, are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission and the available data for the calendar year under review are usually incomplete.

In the absence of official returns from foreign countries the most reliable data available are used in compiling world statistics. Where data other than from the interrogatory replies are published the source of the information is stated. Conversions of foreign moneys or values into United States equivalents have been made at the legal par rates unless otherwise stated (in the text).

Revised world tables for 1928 and tables for 1929, subject to revision, are printed at the end of this volume. Detailed data, arranged by continents and countries, follow herewith; they form the basis of the tables.

Increasing use of silver currency in Mexico

[From Commerce Reports, February 10, 1930]

The reports of the Mexican national banking commission and of the clearing house at Mexico City reveal the increasing importance of the use of silver in the commercial operations of this Republic.

Prior to the revolution of two decades ago, the currency needs of the country were supplied for the most part by bank notes, although silver pesos circulated, particularly in the rural sections. During the Carranza régime paper money was so debased as to become practically worthless, so that by 1917 the country was on a purely hard-money basis. For some years thereafter the bank deposits were kept largely in gold, and most of the wholesale business of the country was conducted on a gold basis. One reason was the high price of silver, which caused silver coins to be at a premium from 1916 through 1920.

INCREASING USE OF SILVER SINCE 1923

Since 1923, however, silver deposits have been increasing, while gold deposits and gold payments have been declining in importance. This tendency is clearly seen in the following tables showing bank clearings through the Mexico City clearing house, by years, from 1923 to 1928, inclusive.

Mexico City clearing-house returns

[Clearing in Mexican gold and silver]

Year	Number of items		Amounts	
	Gold	Silver	Gold	Silver
			<i>Pesos</i>	<i>Pesos</i>
1923.....	98,602	64,910	344,054,605	86,505,445

GOLD AND SILVER MOVEMENTS COMPARED

Recent statements of the Mexican national banking commission have begun to separate gold and silver deposits in cash movements. The following figures show gold and silver movements during September, 1929, in all Mexican banks:

Deposits—Gold, 188,142,000 pesos, and silver, 522,150,000.

Withdrawals—Gold, 187,771,000 pesos, and silver, 517,269,000.

Total—Gold, 375,913,000 pesos, and silver, 1,039,419.

Sight deposits in Mexican banks on September 30 were as follows: Gold, 70,639,000 pesos, and silver, 86,829,000.

SILVER COINS CONSTITUTE BULK OF CIRCULATION

Owing to the negligible quantity of Bank of Mexico notes in circulation at the present time, silver money is generally used by the public for paying small accounts, making retail purchases, wages, and similar items. Rent contracts at Mexico City usually specify that payment shall be in gold. A large part of the rural population is unacquainted with gold coins. Even in towns near the capital native vendors refuse to accept gold in payment for baskets, needlework, pottery, and other domestic products, although the gold coins offered would bring a substantial premium over other coins of the same face value. Merchants, accordingly, usually have large quantities of silver coins on hand and find it convenient to keep their bank accounts in silver.

GOLD COIN SCARCE IN INTERIOR

Mexico City bankers report that merchants in the interior frequently are unable to obtain sufficient gold to meet documents drawn against them. As a result, wholesalers often quote prices in gold and accept payment in silver. As there has been an average discount during the last two years of about 3.6 per cent on silver as compared with gold, permission to pay in silver in effect represents a discount on list prices.

BRITISH HONDURAS

The amount of Government notes in circulation on December 31, 1929, was \$500,990.

Exports of gold and silver coin to the United States of America during 1929—Gold, \$15,000; silver, \$4,113.

COSTA RICA

The quantity of gold produced from placer mining during 1929 was 174 kilos (5,594 ounces), valued at \$26,227.

Average premium on gold in 1929: 400.5 per cent.

Imports of gold and silver coin from the United States during 1929: Gold, \$3,000; silver, \$93,064.

Exports of gold and silver to the United States during 1929: Gold coin, \$85,159; gold bullion, \$410,558; silver coin, \$17,640; silver bullion, \$20,195.

PANAMA

The quantity of gold produced from placer mining during 1929 is valued at \$500.

Currency.—Under the law of June 28, 1904, silver coins with a value of 2,000,000 balboas were placed in circulation by the Panaman Government. When the value of silver increased on account of war prices practically all of these coins disappeared from circulation and were, no doubt, sold for the silver they contained. A small quantity of these coins are now in circulation, approximately 175,000 balboas (\$175,000).

Practically the only currency and coin in circulation is Panama is that of the United States. Local bankers and Panama Canal authorities state that American tourists and visitors pay for their purchases in coins of the United States and that it is not often necessary to import coins to supply local requirements.

Exports of gold to the United States during 1929: Coin, \$11,593; bullion, \$500.

SALVADOR

The total import of United States gold coin during 1929 was \$1,150,000.

By decree No. 39 of February 9, 1929, the prohibition to export Dutch gold coins and Dutch and Colonial silver coins has been removed.

Imports of gold and silver coin from Netherlands during 1929: Gold coin, 1,500,000 florins (\$603,000); silver coin, 100,000 florins (\$40,200).

Metal and paper currencies of Netherland West Indies

[From Thomas W. Voetter, American consul, July 6, 1930]

* * * * *

The coinage act of May 23, 1899, stipulated that the Netherlands 10 gulden gold coin should be a legal tender to an unlimited amount. The Netherlands Rijksdaalder (2½ gulden), gulden and half gulden (50 cents) were made legal tender to the amount of 10 gulden. The one-fourth gulden (25 cents), tenth gulden (10 cents), stuiver (5 cents), half stuiver (2½ cents), cent, and half cent are legal tender to the amount of one guilder. Certain foreign gold coins are given legal tender status at the following rates:

United States:	Guilders
\$20 piece.....	49
Other gold pieces in proportion.	
France:	
20 francs.....	9. 40
10 francs.....	4. 70
Great Britain:	
Sovereign.....	12. 00
Half sovereign.....	6. 00
Venezuela:	
25 bolivares.....	11. 75
20 bolivares.....	9. 40

These specified foreign gold coins may be legally carried in the reserve of the Curacaosche Bank at the given rates.

The legal system of coins comprises the following: Gold, 10 guilders; silver, 2½ guilders (Rijksdaalder), 1 guilder, one-half guilder (50 cents), one-fourth guilder (25 cents), one-tenth guilder (10 cents), nickel, stuiver (5 cents); bronze, half stuiver (2½ cents); cent, one-half cent.

All of the above denominations are theoretically in circulation. The half cent has entirely disappeared from actual use. The 10-gulden gold piece does not circulate actually but is held by the banks as reserve. The half-gulden piece is not popular and the proportion of this denomination in circulation is growing less.

The bank notes issued by the Curacaosche Bank are of the following denominations: 500, 250, 100, 50, 25, 10, 5, 2.50, and 1 guilders. They are all in general circulation but the amount of bills outstanding of the denominations of 2.50 and 1 guilders is diminishing as no new bills of these values are issued by the bank when old ones are redeemed. There are unredeemed notes of old issues outstanding to the amount of 10,800 guilders, a very small proportion of the bills outstanding.

American and Venezuelan notes are generally accepted by merchants from travelers, etc. Such of this as is not paid out to travelers usually finds way to the banks and can not be said to remain in circulation. One of the oil refineries at Aruba pays its American employees in American currency, and American bills are sometimes scarce for this purpose so that the Curacao banks must occasionally import American bills from the United States to meet this special demand. Silver coin of the United States and Venezuela is accepted by the banks only at a discount. American gold coin is not so acceptable as notes, except at times when Venezuelan currency or exchange is at a premium as compared with the dollar. At these times, owing to the Venezuelan law that banks in that country must accept American gold coins at the rate of 104 bolivares to the \$20 United States gold, there is a demand for American gold coins for shipment to Venezuela. At other times Curacao banks buy American gold coins at a slightly lower rate than they offer for notes.

* * * * *

At the end of 1920 the total issue of bills outstanding of the Curacaosche Bank was 5,992,000 guilders. The amount of gold coin held in all the banks was 4,335,000 guilders. The amount of silver coin in the banks was 691,000 guilders. The amount of the various classes of money in the hands of the public was unknown.

AZORES ISLANDS

Metal and Paper Currencies

[From Consul William H. Hunt, June 3, 1930]

The Azorean escudo (Insulano) is the official unit of currency in the Azores; its par value in United States currency is estimated at \$0.8644. However, in reality such a tangible unit of currency as the "Azorean escudo" does not exist. The currency in circulation during the monarchy (the milreis), the unit of which is the "real," has been maintained in the Azores at the request of the Azoreans to facilitate commercial transactions in the islands. The par value of the "real" is about eighty-six one-hundredth of 1 cent in United States currency.

There is no available information regarding the date of the law or decree establishing the present parity of the currency unit.

There are no legal tender provisions of the law governing currency in the Azores. Both the Azorean milreis and the escudo used in continental Portugal are legal tender for all purposes.

The list of coins and notes comprised in the legally recognized currency system in general circulation in the Azores is as follows:

Azorean milreis notes, 50, 20, 10, 5, and 2.50 milreis denominations, equivalent to United States \$0.8644 per milreis, at par.

Escudos of continental Portugal (notes), 1,000, 500, 100, 50, 20, 10, 5, and 2.50 escudo denominations, equivalent to United States \$1.0805 per escudo, at par.

Coins, 1, 0.50, 0.20, 0.10, and 0.05 escudo denominations.

There are not in circulation any old issues of coins or notes not mentioned in the present monetary system.

No foreign notes or coins are in circulation.

There is no Azorean metal currency, properly so called, all the metal coins used in the islands are the same as those in circulation in continental Portugal.

BELGIUM

The silver coinage executed in Belgium for Poland during the year ended December 31, 1929, consisted of 5,490,000 5-zloty pieces, having a face value of 27,450,000 zlotys (\$3,079,890).

The amount of domestic silver coin withdrawn from monetary use for recoinage during 1929 had a silver content of 106,873.47 kilos (3,435,982 ounces.)

Law No. 103 of June 22, 1928, regarding the coin system

The national assembly of the Republic of Czechoslovakia has enacted the following law:

I. SYSTEM OF COINS

SECTION 1. (1) The following shall be coined as coins of the Czechoslovak currency:

1. Coins of 5 and 10 hellers composed of a mixture of copper and zinc.
2. Coins of 20 and 50 hellers and of 1 C. S. crown, of an alloy of bronze and nickel.

3. Coins of 5 and 10 C. S. crowns, of silver.

(2) (This paragraph relates to the time when certain coins shall cease to be legal tender.)

SEC. 2. (This section states that certain Austro-Hungarian coins are not legal tender.)

II. COINAGE

SEC. 3. (1) Coins of 5 and 10 hellers shall be composed of a mixture of 92 parts copper and 8 parts zinc, and there shall be 500 10-heller pieces and 600 5-heller pieces to a kilogram of minting metal.

(2) Coins of 20 and 50 hellers and crown pieces shall be composed of an alloy of nickel and bronze in the proportion of 80 parts copper and 20 parts nickel, and there shall be 300 20-heller pieces, 200 50-heller pieces, and 150 crown pieces to a kilogram of minting metal.

(3) The obverse of all these five coins shall bear a small emblem of the C. S. Republic, and on the reverse the value of the coin shall be indicated; there is no difference at all between them and the present five coins of equal value.

SEC. 4. (1) Silver 5-crown pieces shall be coined from a mixture in the proportion of 500 parts of silver to 500 parts of copper, and silver 10-crown pieces from a mixture in the proportion of 700 parts of silver to 300 parts of copper.

(2) From a kilogram of minting metal there shall be coined 100 10-crown pieces' or 142.8571 5-crown pieces, so that the gross weight (coinage standard) of a 10-crown piece shall be 10 grams, of a 5-crown piece, 7 grams, and the fine weight of a 10-crown piece shall be 7 grams and of a 5-crown piece, 3.5 grams.

(3) The coinage of these two silver coins must be as accurate as possible; inasmuch as it is impossible to make absolutely certain of this, a tolerance shall be allowed both upwards and downwards, namely, ten one-thousandths in the gross weight (coinage standard) and five one-thousandths in the net (finesness).

(4) The diameter of the 10-crown piece shall be 30 millimeters, and that of the 5-crown piece 27 millimeters.

(5) The emblem of the C. S. Republic shall be on one side of both these coins, and, according to the nature of the whole design the value of the coin shall be indicated on the same side or on the other.

(6) The whole design of both coins shall be fixed by Government decree, in which shall also be fixed the number of silver 10-crown pieces to be issued, both the ordinary and the jubilee crowns, bearing the designation of the decade, "1918 28/X 1928."

SEC. 5. (1) All small coins (section 1) shall be coined only for account of the state, in all (including the silver jubilee 10-crown pieces) at the most to the amount of 600,000,000 Czechoslovak crowns of nominal value.

(2) The coinage of all individual coins is to be adapted to the actual requirements, which are to be ascertained by the Czechoslovak National Bank, etc., etc.

(NOTE.—The remainder of the law does not pertain to the weight and fineness of the coins provided for. At the conclusion, the laws superseded by the present law are mentioned, and it is provided that the latter shall go into effect 45 days after its promulgation.)

Text of Czechoslovak currency law

[From Federal Reserve Bulletin, December, 1929]

On November 7, 1929, the standing committee of the Czechoslovak National Assembly enacted, in pursuance of article 54 of the constitution, certain legislation for the definite stabilization of the Czechoslovak currency. By section 11 the enactment was to come into force on the day of proclamation; the act was proclaimed in force on November 27, 1929. The text is given below:

SECTION 1. The Czechoslovak crown (Kč) as the present currency unit of the Czechoslovak Republic shall be equal in value to 44.58 milligrams of fine gold (\$0.029629).

SEC. 2. The National Bank of Czechoslovakia (hereafter referred to as the bank) shall maintain the exchange value of its notes at the legal rate (see sec. 1) and can be made responsible for nonperformance of this price duty (see sec. 11 of the bank of issue act of April 14, 1920, No. 347 of the Collection of Laws and Ordinances).

SEC. 3. 1. The bank shall be bound to purchase at the head office in Prague and at such branch offices as shall be designated by the bank, gold at the price of 1 Kč per 44.58 milligrams, but only if the seller offers a quantity of at least 12 kilograms of fine gold (\$7,975). The bank shall be entitled, in effecting such purchase, to make no other charges except for assaying, and for coining in accordance with a scale fixed by the Government mint (see sec. 4, par. 6).

2. The bank shall at the aforesaid premises (see par. 1) redeem its notes at its option either by gold (either in the form of current coin or gold bullion) at the price of 1 Kč per 44.58 milligrams of fine gold or by gold foreign exchanges at the rate of the day quoted on the Prague Bourse, but only in amounts equal in value to at least 12 kilograms of fine gold. Should the bank fail to carry out this obligation within 24 hours of the presentation of the notes without being able to plead force majeure, its charter shall be canceled (see sec. 12b of the bank act).

3. The Government in agreement with the bank will determine by special decree the date on which the aforesaid legal obligation stated in paragraphs 1 and 2 shall come into force, or, having come into force, to what extent this obligation shall be temporarily limited or amended with regard to the amount.

SEC. 4. 1. In conformity with the legal gold content of the Kč (see sec. 1) gold coins (hrivny) shall be minted, containing 900 parts of fine gold and 100 parts of copper.

2. One kilogram of standard gold shall be minted into 201.89783969 hundred-crown pieces, and one kilogram of fine gold into 224.31583669 hundred-crown pieces, the standard weight of the hundred-crown piece to be 4.9533 grams containing 4.458 grams of fine gold.

3. The minting of the coins shall be as accurate as possible; in so far as this can not be attained absolutely a tolerance shall be allowed either way of two-thousandths in standard weight and one-thousandth in fineness.

4. One face of the hundred-crown piece shall be impressed with the armorial bearings of the Czechoslovak Republic, and the denomination of the coin shall be marked on the face or the reverse according to the character of its general design.

5. The hundred-crown gold pieces shall be legal tender for the payment of any amounts which can be made in Czechoslovak currency.

6. The general design of the hundred-crown gold coins and the date on which the Government Mint shall commence their coinage on account of the Government, as well as the date on which unlimited coinage of gold for private persons shall commence, shall be fixed by special Government decree which shall also fix the minting charges, which, however, shall not exceed 0.3 per cent of the value.

SEC. 5. 1. If a hundred-crown gold coin has lost in weight (see sec. 4, par. 2) by ordinary wear and tear not more than five one-thousandths of the standard weight, it shall be considered as of current weight and shall be accepted as of full weight for all payments both at Government and other public cash offices and in private dealings. If, however, its weight has diminished by ordinary wear and tear below the current weight or if the coin has been reduced, impaired, or perforated otherwise than by ordinary wear and tear, it shall cease to be legal tender. Government and other public cash offices when receiving such coin shall withdraw it from circulation by debasing the same in a striking manner and returning it to the presenter without compensation.

2. Any counterfeit coins ascertained by any of the aforesaid cash offices shall be impounded without compensation by the Government and sent to the Government mint.

3. The Government mint, to which all faulty coins must be sent, shall decide whether the coins have lost weight through ordinary wear and tear or other damages (see par. 1) or whether they are counterfeit (see par. 2).

SEC. 6. 1. The bank shall maintain the following metallic cover: Until the end of 1929 at least 25 per cent, by the end of 1930 at least 30 per cent, by the end of 1935 and thereafter at least 35 per cent of the total note circulation plus sight liabilities.

2. In calculating the relation of the metallic cover to circulation, the average rate of exchange of the gold foreign exchanges in each fiscal quarter as quoted on the Prague Bourse during the last fortnight of the preceding quarter shall be conclusive.

3. At least one-half of the metallic cover shall consist of gold bullion or coin; the balance may consist of foreign bank notes convertible into gold (valuta), foreign full legal tender coin, and bills of exchange which are either drafts on the principal banking places in Europe and America indorsed by first-class banking institutions and otherwise conforming to the conditions of bank drafts, or liquid balances with banks of unquestionable standing in the principal banking places of Europe and America.

SEC. 7. 1. The present share capital of 12,000,000 United States dollars, divided into 120,000 shares of 100 United States dollars each, shall be converted at the rate of \$1 to 33.75 Kč into 405,000,000 Kč, the nominal value of one share thus becoming 3,375 Kč; it will not be necessary, however, to issue new shares nor to stamp the old shares.

2. The bank is authorized to increase its capital to 607,500,000 Kč should a resolution to that effect be passed at a general meeting.

SEC. 8. When the State notes debt has been reduced to not more than 1,000,000,000 Kč, the bank shall be authorized, in spite of the principle stated in paragraph 1, section 129 of the bank act, to discount Government bills up to a total of 200,000,000 Kč to cover temporary differences in budgetary expenditure and revenue. Such temporary credits shall be repaid not later than the end of March in the following year. Such bills must also bear the signature of a banking institution.

SEC. 9. The bank is authorized, in agreement with the Minister of Finance and as long as no infringement of its own legal obligations is involved, to participate in international financial and economic institutions and arrangements of monetary importance.

SEC. 11. This enactment shall come into force on the day of proclamation. The Minister of Finance shall be charged with putting it into execution.

NOTE.—Section 10 cancels or amends certain banking laws and ordinances.

Laws affecting the currency

Decree No. 69, of May 15, 1929, permits—as from May 15, 1929—the minting of double ducat coins for private account out of gold furnished by the party, the fee for minting being 5 Czechoslovak crowns per double ducat.

Government ordinance No. 93, of June 28, 1929, authorizes the minting of 5-ducat and 10-ducat pieces having a gross weight of 17.45448 grams and 34.90896 grams, respectively, and a fine weight of 17.2120545 grams and 34.424199 grams, respectively.

Decree No. 95, of June 28, 1929, fixes the fee for minting of 5-ducat and 10-ducat pieces at 10 Czechoslovak crowns and 15 Czechoslovak crowns, respectively. This is the fee established by article 4 of law No. 62, of March 23, 1923.

Decree No. 129, of September 10, 1929, authorizes the National Bank—as from September 18, 1929—to issue silver 5-crown pieces. The present 5-crown pieces remain legal tender until otherwise decreed.

GIBRALTAR

Currency

The official currency of Gibraltar is British sterling, but owing to its proximity to Spain and the large daily influx of Spaniards into the garrison, Spanish money has a larger circulation.

Local currency notes to the value of £130,000, issued by the Government of Gibraltar under authority of the currency note ordinance, 1927, are in circulation and are legal tender in Gibraltar for the payment of any amount. British treasury notes are also in circulation.

London Gold Market

[From Samuel Montagu & Co.'s Weekly Bullion Circular, June 11, 1930]

An interesting position has arisen in the London gold market owing to the fact that the Bank of England is now giving out bars of standard fineness (about 9166/10000) instead of fine bars (ranging from 9950/10000 upwards) which buyers had been accustomed to receive from that institution. Under the gold standard act of 1925 the Bank of England is entitled to sell bars of any fineness provided not lower than the standard of sovereigns (916.2/3-1000). For many months past the bank's stock of fine gold bars has been heavily depleted by withdrawals for the Continent, whilst the bulk of its receipts has been in the form of sovereigns, as will be seen by the following figures:

From June 1, 1929, to May 31, 1930

Bar gold:	£18,334,000
Received.....	63,615,000
Withdrawn.....	
Sovereigns:	39,651,000
Received from abroad.....	452,000
Withdrawn for export.....	

It is therefore only natural that the bank should decide to exercise its legal right of selling bar gold of standard fineness only.

As the Bank of France does not accept bars of a lower fineness than 9950, a consequence of this change of practice is to lower the gold export point to France

by the cost of refining the standard gold, and accordingly the rate fell rapidly yesterday from about 123.88 to 123.70 when the bank's decision became known.

It will be readily understood that there was unusually keen demand for the £476,000 of bar gold from South Africa in the open market to-day, as this was the only fine gold available for France. All but £30,000, which was required for India and the trade, was bought by France at the fixed price of 85s/-3/8d per fine ounce, a premium of 7/8d for delivery of fine gold being established over 84s/11.1/2d which has been the maximum price for dealings in the open market since the restoration of the gold standard in 1925.

GREECE

Gold reserve and note circulation of the Bank of Greece on December 31, 1929: Gold, 640,476,275 drachmas (\$8,311,778); note circulation, 5,193,263,910 drachmas.

Gold was not at a premium with bank notes at any time during 1929. Throughout the year the drachma was duly maintained at 375, which is the rate of exchange on London in the Athens market.

Laws Affecting the Currency

According to the terms of an agreement between the State and the Bank of Greece, the latter renounced its privilege of issuing bank notes of 20 drachmas denomination, and recognized the privilege of the State to issue metallic subsidiary coins for the said denomination. This convention is the object of a draft law, which is likely to become a law in the course of the year 1930.

HUNGARY

The domestic silver coinage executed in home mints consisted of 5,000,000 2-pengő pieces, having a face value of 10,000,000 pengő (\$1,749,000). The 2-pengő coins are not yet in circulation.

The estimated quantity of gold and silver used in the industrial arts during 1929 was 1,264 fine kilos (40,638 ounces), valued at 4,835,435 pengő (\$845,718), silver, 23,370 fine kilos (751,345 ounces), valued at 2,292,643 pengő (\$400,983.)

Laws Affecting the Currency

By Law XXVI of 1929, promulgated June 29, 1929, the stock of silver coin, fixed at 45,000,000 pengő by section 11 of Law XXXV of 1925, was raised to 65,000,000 pengő, and the minting of 2 and 5 pengő coins, in addition to 1-pengő coins, was provided for. The new coins are to have the same fineness, 0.640, as the old coins and a gross weight of 10 and 25 grams, respectively.

Law XXVI of 1929 Concerning the Minting of Five and Two Pengő Silver Coins, Promulgated June 29, 1929

* * * * *

ARTICLE 1. In addition to the coins specified in article 10 of Law XXXV of 1925, which deals with the introduction of pengő currency and with pertinent regulations relating thereto, 5 and 2 pengő silver coins shall also be minted.

ART. 2. The total of the nominal value of silver coins to be minted shall not exceed 65,000,000 pengő, instead of 45,000,000 pengő nominal value stipulated in Article 11 of Law XXXV of 1925.

The Minister of Finance shall decide the number of the 5 and 2 pengő coins that may be minted from the above nominal amount.

ART. 3. The 5 and 2 pengő silver coins shall be minted, just as the 1-pengő silver coins, from an alloy containing six hundred and forty-thousandths part silver and three hundred and sixty-thousandths part copper.

The 5-pengő coin shall weigh 25 grams. * * * The 2-pengő coin shall weigh 10 grams. * * *

* * * * *

ART. 4. The treasury and all tax collectors must accept the 5 and the 2 pengő coins on their face value and in unlimited amounts.

From the period when the Hungarian National Bank shall begin gold payments, the coins specified above shall, upon demand, be exchanged by the cashier for gold coins (article 4 of Law XXXV of 1925). The rules of exchange shall be established by the Minister of Finance.

In private trade, in payment of debts, no person shall be obliged to accept 5 pengő silver coins in excess of 250 pengő and 2 pengő silver coins in excess of 100 pengő.

ART. 5. The provision of articles 14, 15, and 27 of Law XXXV of 1925 shall also apply with reference to the 5 and 2 pengő silver coins. * * *

ART. 7. This law shall come into force from the day of its promulgation and it shall be enforced by the Minister of Finance. * * *

ICELAND

Metal and Paper Currencies

[Frome American Vice Consul Frederick L. Washbourne, May 31, 1930]

On May 1, 1922, there became effective the 50-year Belgian-Luxemburg economic agreement eliminating customs duties between the two countries.

The economic agreement provided for the use in Luxemburg of Belgian money, metal and paper currency, and since May 1, 1922, Belgian money has circulated freely in the Grand Duchy and to-day is by far in greater use than the metal and paper currencies issued by the Banque Internationale de Luxemburg, the government bank of issue. * * *

1. The official unit of currency in the Grand Duchy is the Belgian franc with a par value in United States currency of \$0.0278.

2. The Belgian-Luxemburg economic agreement on May 1, 1922, established the value of Luxemburg francs and the above par value became effective through the stabilization by Belgium of their money. * * *

4. The following Luxemburg currency is in general circulation:

Coins: 5 centimes, 10 centimes, 1 franc, 5 francs, 10 francs. Paper notes: 20 francs, 100 francs.

5. On January 1, 1930, the old Luxemburg paper 5 and 10 franc notes ceased to have any value and were recalled. Beginning September 1, 1929, the 5 and 10 franc silver coins were gradually placed in circulation to replace the notes. * * *

The Belgian money used follows:

Coins: 5 centimes, 10 centimes, 25 centimes, 1 franc. Paper notes: 5 francs, 10 francs, 20 francs, 50 francs, 100 francs, 500 francs, 1,000 francs.

It may be mentioned that while Belgian money circulates in Luxemburg the Luxemburg money is not accepted in Belgium as a medium of exchange, and at banks at a considerable discount. * * *

12. Data of Luxemburg metal coins:

Denomination	Diameter	Thick- ness	Weight	Alloy
	Milli- meters	Milli- meters	Grams	
5 centimes.....	19	1	2½	95 per cent copper; 4 per cent tin; 1 per cent zinc.
10 centimes.....	23	1¼	4	
25 centimes.....	25	1½	5½	
1 franc.....	23	1¾	4	
5 francs.....	28	1¾	8	Pure nickel.
10 francs.....	31	2	13¼	0.625 silver, 0.375 copper.
				0.750 silver, 0.250 copper.

MALTA (AND GOZO)

Approximate stock of British silver coin (including bronze coin) and British Government currency notes in circulation on December 31, 1929: Coin, £35,000 (\$170,327); notes, £750,000.

Exports of silver coin during 1929: To Great Britain, £200 (\$973); to United States of America, £126 (\$613).

Polish Currency

[From L'Economiste Européen, Paris, Apr. 5, 1929]

The Law Journal of March 6, 1929, published the decree of the Minister of Finance on the retirement of the 5-zloty notes bearing the date May 1, 1925. Beginning June 30, 1929, these notes will cease being legal tender and until June 30, 1931, will be exchanged against coin and Bank of Poland notes at the headquarters and branch offices of the bank, at the Central State Bank, as well as at the treasury offices.

The new monetary law of November 5, 1927, provides for placing in circulation 5-zloty silver pieces and 1-zloty nickel pieces.

PORTUGAL

Estimated quantity of gold and silver used in the industrial arts: Gold, 2,337 kilos (75,135 ounces); silver, 18,526 kilos (595,611 ounces).

Laws Affecting the Currency

Decree No. 12: 892 (December 17, 1926) orders the continuation of the circulation of the 100 and 50 reis nickel coins, the silver coins and copper-nickel coins of 50, 20, and 10 centavos; and the retirement on January 1, 1927, of the 20, 10, and 5 reis coins, the 5, 2, and 1 centavo bronze coins, and the 4-centavo copper-nickel coins.

Decree No. 15: 386 (April 18, 1928) authorizes the coinage of 200,000 silver 10-escudo coins, weighing $12\frac{1}{2}$ grams, to commemorate the battle of Ourique.

¹In 1928, 1,131 escudos (\$1,222).

RUMANIA

The quantity of gold and silver used in the industrial arts in 1929 is estimated as having been the same as in 1928, viz, 110 fine kilos (3,543 ounces) of gold and 1,372 fine kilos (44,116 ounces) of silver.

The production of gold and silver from lead and copper ores during 1929 was as follows: Gold, 2,213 fine kilos (71,148 ounces), valued at 245,870,642 paper lei (\$1,475,224); silver, 2,822 fine kilos (90,727 ounces), valued at 7,587,871 paper lei (\$45,527).

Approximate stock of gold and silver, also of paper money, used for monetary purposes on December 31, 1929: Gold coin and bullion in National Bank (from bank's balance sheet), 5,265,893,602 gold lei (\$31,595,362); gold held abroad for account of National Bank, 3,919,466,728 gold lei (\$23,516,800); silver coin in National Bank, 7,276,283 gold lei (\$43,658); note circulation, 21,144,156,446 paper lei.

Monetary Law of February 7, 1929

ARTICLE 1. The Rumanian monetary unit is the leu weighing 10 milligrams of gold, 9 fine.

ARTICLE 2. The issue privilege granted to the National Bank by the organic law of April 17, 1880, and renewed by laws of March 7, 1886, January 26 and June 23, 1901, and June 19, 1925, is confirmed.

The notes of the National Bank continue to be legal tender.

ARTICLE 3. The National Bank notes are convertible to the bearer and at sight, at the central office and, at the option of the bank, either into legal tender, gold coin, or into gold bars, or into gold foreign exchange.

The bank insures the convertibility of its notes to any amount. However, no one can present to it more than 100,000 lei at a time for reimbursement.

ARTICLE 4. The National Bank must have a reserve of gold or gold exchange of at least 35 per cent of the total amount of its sight obligations, 25 per cent of which must be covered by gold in the bank or available abroad.

ARTICLE 5. The Government is authorized to issue fractional coins of 1, 2, 5, 10, and 20 lei made of aluminum or nickel alloy, the total amount thereof not to exceed 3,000,000,000 lei.

Stabilization of the Leu

[From L'Economiste Européen, Paris, Feb. 15, 1929]

The Rumanian Official Monitor published recently a special edition to promulgate the law pertaining to monetary stabilization and other financial laws, which have been likewise voted.

The stabilization law establishes as Rumanian monetary unit the leu weighing 10 milligrams of gold, 0.900 fine. This law has been voted by all political parties.

New Rumanian Metallic Coins

[From J. Rives Childs, American consul, May 3, 1930]

On March 15, 1930, the Rumanian Ministry of Finance put into circulation through the National Bank and its branches metallic coins of 5 and 20 lei under the provisions of the Rumanian Loan for Stabilizations and Economic Development of February 7, 1929.

* * * * *

The weight of the coins is as follows:

Twenty lei coins: 7.5 grammes, the yellow alloy consisting of 79 per cent copper, 20 per cent zinc, and 1 per cent nickel.

* * * * *

The present 5 lei and 20 lei notes of the National Bank will continue to circulate along with the metallic coins of the same denomination and this paper currency will not be withdrawn from circulation until the entire quantity of the coins which have been ordered have been received and put in circulation.

* * * * *

NOTE.—All conversions in this report have been made at the official de jure rate of stabilization of \$0.006 to 1 leu, a rate which was legally enacted on February 7, 1929.

Federal Law Amending the Federal Law of April 7, 1921, Respecting the Swiss National Bank

[From Federal Reserve Bulletin, May, 1930]

(December 20, 1929)

The Federal Assembly of the Swiss Confederation, with reference to the message of the Federal Council transmitted on October 8, 1929, decrees:

I. Articles 14, 19, 20, and 22 of the Federal law of April 7, 1921, respecting the Swiss National Bank, are repealed and replaced by the following provisions:

Art. 14. The National Bank is a bank of issue, of clearing, and discount, and is authorized to carry on the following operations only:

1. To issue bank notes in accordance with the provisions of the present law.
2. To discount Swiss bills of exchange and demand drafts bearing the names of at least two persons of unquestioned solvency and independent of one another; and to discount Swiss securities eligible as collateral. The maturity of these securities may not exceed three months. Bills of exchange and demand drafts of agriculturists, arising out of commercial transactions, are to be dealt with in the same manner as other bills of exchange.

3. To buy and sell bills of exchange, demand drafts, and sight balances abroad, as well as treasury bills of foreign governments. Their maturity shall not exceed three months. The bills shall bear the names of at least two persons of unquestioned solvency and independent of one another.

* * * * *

8. To buy and sell, for its own account and for account of others, precious metals in the form of bullion or coin, and to make advances on these metals.
9. To issue gold certificates.

10. To receive for safe-keeping, and to act as trustee for, securities and other articles of value; to buy and sell securities and to make subscriptions for account of others.

11. To assist in issuing loans of the Confederation, and to accept subscriptions to loans of the Confederation and of the Cantons, but without itself underwriting any of these loans.

ART. 19. The equivalent of notes in circulation must be covered by—
Swiss gold coins.

Gold bullion calculated at the legal monetary rate, making deduction for cost of minting.

Foreign gold coin.

Swiss bills of exchange and demand drafts and Swiss securities.

Foreign bills of exchange and demand drafts, treasury bills of foreign governments, and sight balances abroad.

Credits arising out of advances in current account—

(a) On securities in conformity with the provisions of article 14, section 4, subsection (b).

(b) On precious metals (art. 14, sec. 8).

The metallic reserve shall amount to at least 40 per cent of notes in circulation. This minimum metallic reserve of 40 per cent shall be held entirely in Switzerland.

ART. 20. The National Bank is obligated to redeem its notes on demand in Swiss gold coin—

(a) At its office in Berne, without limit as to amount;

(b) At its office in Zurich, as well as at the branches and agencies administered by the bank, to the extent that the reserve and their own needs permit, but in any event with no more delay than is necessary to have specie brought from the head office.

The service of note redemption shall be organized to meet the needs of the locality.

ART. 20Bis. During such time as the banks of issue of countries designated as important by the authorities of the bank do not themselves redeem their notes in gold coin, the bank shall have the right to redeem its notes on demand in one or another of the following forms:

In Swiss gold coin.

In gold bars, of the customary commercial weight (about 12 kilograms) on the basis of mint parity.

In gold exchange (bank deposit or check); that is to say, in exchange on countries having a free gold market. The rate of conversion of this exchange shall be calculated on the basis of the exchange rate of the foreign currency at the time of the transaction. It shall not, however, in any case exceed the export point for shipment of Swiss gold coin to the foreign bank on which the draft is drawn. The selection of the foreign currencies (in which redemption is to be effected) is reserved to the national bank.

Redemption shall be made—

In gold coin and gold bars, at the office in Berne without limitation as to amount; at the office in Zurich, and at the branches and agencies administered by the bank, to the extent that the reserve and their own needs permit, but in any event with no more delay than is necessary to bring the metal from the head office.

In gold exchange at any of the above-mentioned offices of the bank, without limitation as to amount.

The service of note redemption shall be organized to meet the needs of the locality.

¹ Conversion rate, 1 Canton dollar=\$0.23156.

It is reported that 5,500,000 20-cent pieces of the thirteenth year of the Chinese Republic were reminted during 1929, and also 4,000,000 10-cent pieces of old, debased coins. These two amounts are equivalent to \$410,000, at the exchange rate of one Canton dollar to \$0.2774 United States currency.

Although deposits of both gold and silver are known to exist in the district, it is doubtful whether as much as \$5,000 in precious metal is mined annually.

NOTE.—Stated in United States dollars.

CHUNGKING, (CZECHUEN PROVINCE)

The domestic silver coinage executed at the Chengtu mint during 1929 consisted of 480,000 dollars, understood to be .600 fine (\$197,827).

The circulation of 50, 20, 10, and 5 cent silver coins has been suspended in Chengtu. No notes were issued by the Chengtu Government and banks.

The value of silver ingots stocked in Chengtu at the end of 1929 was about 300,000 taels.

HARBIN (MANCHURIA)

The Harbin dollar note circulation of the five banks of issue on December 31, 1929, amounted to 37,300,000 Harbin dollars. It is believed that this amount does not include notes of denominations less than one dollar. The paper currency is inconvertible. There is no metal coin in circulation, but a certain amount of silver is held by banks and private individuals.

There is an embargo on the exportation of silver and there is no gold available for export.

HONG KONG COLONY

Silver coinage executed in foreign mints for Hong Kong during the calendar year 1929: In India, 5,100,036 Hong Kong dollars; in England, 4,691,968 Hong Kong dollars; total coinage, 9,792,004 Hong Kong dollars (\$4,096,060).

Approximate stock of silver coin in home banks on December 31, 1929, held as reserve against note issue, 43,750,000 Hong Kong dollars (\$18,301,062; notes) of banks of issue in circulation, 78,731,331 Hong Kong dollars (equivalent to 79,909,930 Yuan dollars).

The paper currency is at a premium over the gold value of silver. The average premium in 1929 was 10 per cent over gold.

MUKDEN (LIAONING PROVINCE)

Approximate stock of silver coin and notes in circulation on December 31, 1929: Silver coin, 30,000,000 Yuan dollars (\$12,364,200); gold yen notes, 10,000,000 Yuan dollars; silver dollar notes, 20,000,000 Yuan dollars.

YUNNAN PROVINCE

The silver coinage executed in home mints during 1929 consisted of 4,563,265 20-cent pieces, having a face value of \$912,653. If these coins conformed with the Yuan coinage specifications they contained about 570,000 fine ounces of silver.

The estimated quantity of new gold and silver bullion used in the industrial arts during 1929 was as follows: Gold, 600 ounces (.850 fine), valued at 360,000 Yunnan dollars (\$10,543); silver, 6,000 ounces, valued at 60,000 Yunnan dollars (\$1,757).

Gold and silver production during 1929: Gold from placer mining, 200 ounces, valued at 180,000 Yunnan dollars (\$5,271); silver from lead ores, 6,000 ounces, valued at 60,000 Yunnan dollars (\$1,757).

The amount of Government bank notes in circulation on December 31, 1929, is estimated at from 90,000,000 to 150,000,000 Yunnan dollars (100 million Yunnan dollars = about 83 million Yuan dollars).

Price of gold: 500 Yunnan paper dollars will buy $1\frac{1}{2}$ ounces of gold.

Imports of silver bullion during 1929: From Hong Kong, 332,200 Haikwan taels (\$214,980); from Tonking, 770,000 Haikwan taels (\$498,298).

Exports of silver coin to Tonking during 1929: 805,707 Haikwan taels (\$521,405).

The domestic silver coinage executed in home mints during the year ended December 31, 1928, consisted of 4,256,850 20-cent pieces, having a face value of 851,370 Yunnan dollars (\$328,969).

Estimated stock of silver coins and government bank notes in circulation on December 31, 1928: Silver coin, 6,000,000 Yunnan dollars, (\$2,318,400); notes, 100,000,000 Yunnan paper dollars (equivalent to 28,587,916 Yuan dollars).

Imports from and exports to French Indo-China of silver bullion and coin, respectively, during the year 1928: Imports, 175,200 haikwan taels (\$123,940); exports, 256,000 haikwan taels (\$181,100).

IRAQ (MESOPOTAMIA)*The Currency of Iraq*

[By Consul Alexander K. Sloan, Baghdad, in Commerce Reports, May 26, 1930]

The unit of currency accepted as legal tender in Iraq is the Indian rupee. No laws establish its parity in Iraq, which is announced daily by the banks according to information from India. The average par value of the rupee in Iraq during the past four years has been \$0.3636 and no great deviations have been noted.

Laws Establishing the Rupee as Legal Tender

The legislative bodies of Iraq have not passed any laws establishing the Indian rupee as legal tender, but it is accepted as such on the basis of military proclamations. Recently, the Ministry of Justice, in reply to a query from the Ministry of Finance as to the legal par value of the Turkish gold lira, referred that ministry to the proclamation of August 27, 1917, and stated that the monetary system of the country was based upon that and other military edicts dealing with matters pertaining to currency.

Notes and Coins Which are Legal Tender Circulating in Iraq

The following coins are recognized as legal tender and circulate in Iraq:
Silver: 1 rupee. One-half rupee or 8 annas, one-fourth rupee or 4 annas, one-eighth rupee or 2 annas. Nickel: 8 annas, 4 annas, 2 annas, 1 anna.
Copper: One-fourth anna.

The silver 2-anna piece and the nickel 8-anna piece are not in general circulation. The notes recognized as legal tender are 1,000, 100, 50, 10, and 5 rupees, and 1 rupee. The 1,000-rupee and 50-rupee notes are not generally circulated.

Other Coins in Circulation

Turkish liras appear from time to time, as many inhabitants of the country hoarded gold when the Turkish paper currency began to circulate. Moreover, the desert tribes, accustomed to the gold lira through centuries of dealings with the Turks, use this currency to an extent in their transactions with each other. These coins, however, are being gradually gathered in by the banks and shipped to India, where they are exchanged for the currency of that country. The gold lira has a present value of 11 rupees 14 annas (\$4.31), but the par value fluctuates according to the price of gold bullion and the demand for gold liras.

Iraq is not prosperous and the great majority of the people do not patronize banks or use checks. Their business transactions as a rule are of no great size and they pay in cash. Baghdad, with its estimated population of 300,000, supports only three banks.

Estimate of Iraq's Monetary Stock

The Ministry of Finance has prepared no statistics showing the value of Iraq's monetary stock, but the banks estimate that there are Indian rupees to the value of about \$25,000,000. It is thought that there are still large stocks of Turkish gold liras, as many inhabitants for one reason or another prefer

gold to silver or paper and will purchase as many gold liras as their means permit them to do. There is no way of obtaining an estimate of the amount of these hoarded gold coins, as from 1914 to 1922 all financial matters were in a chaotic condition. An estimate often heard in banking circles, to the effect that the hoarded gold is equal in value to the currency in circulation, or about \$25,000,000, is guesswork only.

JAPAN, INCLUDING CHOSEN, TAIWAN, KARAFUTO, AND KWANTUNG

The domestic silver coinage executed in home mints during the year ended December 31, 1928, consisted of 38,592,000 50-set pieces, having a face value of 19,296,000 yen (\$9,619,056).

The amount of domestic coin withdrawn from monetary use for recoinage during 1928 was as follows: Gold, 806 yen (\$402); silver, 9,657,000 yen (\$4,814,015).

The total import of United States gold coin and bullion during 1928 was as follows: Coin melted at mints, 24,046 momme (2,899 troy ounces), valued at 120,233 yen (\$59,936); bullion, 74,610 momme (8,995 troy ounces), valued at 404,203 yen (\$201,495).

Metal and Paper Currencies

[From Oscar S. Heizer, American consul, June 13, 1930]

Algeria is a colony of France. It possesses its own issuing bank in the Bank of Algeria which is responsible for the note circulation and which prints and designs its own currency. It is also the medium through which new coinage or fresh stocks of it are distributed. The coinage is always the same as that of France.

At present no silver pieces are in circulation as they would be hoarded by the natives. It is understood that silver coinage will be introduced as soon as the total amount in circulation justifies such a course. The present coinage is looked on as of a temporary nature. It bears no government warranty, but is inscribed "Chambres de Commerce de France."

1. The official unit of currency is the French gold franc of 0.05875 grams with a fineness of nine hundred one-thousandths, United States par value \$0.03918.

2. The present unit was fixed by the decree of June 25, 1928.

3. Silver (none in circulation) is good tender up to 250 francs; nickel-bronze pieces (replace silver) up to 50 francs; nickel or copper fractions of the franc are good tender up to 10 francs.

4. Notes are for 1,000, 500, 100, 50, 20, 5 francs. Coins are for 2, 1, 0.50, 0.25, 0.10, 0.05 francs. All are in general circulation.

* * * * * * *

6. A few copper coins of Frs. 0.10 and 0.05 are in circulation which are of Italian or Spanish issue. They are accepted tacitly by the public, possibly because they are worth intrinsically more.

There are also similar pieces in circulation made of aluminum and issued by local chambers of commerce during the war. Their currency is strictly regional and confined to the locality of issue.

* * * * * * *

8. Notes in circulation are Frs. 2,003,000,000 against a total authorized issue of Frs. 2,400,000,000. There is no gold in circulation either in France or in Algeria. Bar gold held by the Bank of Algeria figured at April 30, 1930, for 206,435,000 francs, say \$8,095,500.

* * * * * * *

12. (a) The metal coinage now current in Algeria and issued according to requirements by the French Mint is:

Frs. 2, 1, 0.50, 0.25, 0.10, 0.05. (Fractions of the franc are called centimes; thus Frs. 0.50 is 50 centimes.)

(b) Francs 2, 1, 0.50 are in bronze nickel. Francs 0.25, 0.10, 0.05 are in nickel and are perforated in the center.

* * * * * * *

Bank of Algeria Circulation Limit to be Abolished

[From Commerce Reports, May 20, 1929]

At a special meeting of the stockholders of the Bank of Algeria on April 26 the institution was authorized to conclude a convention with the French and Tunisian Governments providing for the abolition of the legal limit on note circulation and making the note issue dependent on the maintenance of a minimum percentage of cover in gold reserve and in values convertible into gold. The present legal limit for note circulation, 2,100,000,000 francs, has been considered insufficient to meet the growing monetary needs of Algeria and Tunisia. The suppression of the legal limit, which follows a similar action last year for the Bank of France, will make circulation more elastic and subject to fluctuation in accordance with the economic requirements of the two areas.

BECHUANALAND

Production of gold and silver in 1929, per questionnaire data supplied by the United States Bureau of Mines Gold, 1,725 fine ounces valued at £7,724 (\$37,590); silver, 162 fine ounces, value not given.

BELGIAN CONGO

Total.....	5,376	172,838	114,395,000	3,180,181

Gold reserve and note circulation of the Bank of Belgian Congo on December 31, 1929: Gold, 37,430,951 francs (\$1,040,580); note circulation, 183,631,836 francs. In addition to the gold reserve, the circulation is also guaranteed by 44,561,217 francs in foreign gold exchange.

Exports of gold ore during 1929, 85,804,244 francs (\$2,385,358).

Laws Affecting the Currency

The agreement of October 10, 1927, between the government of Belgian Congo and the bank of issue, approved by decree of November 14, 1927, fixed the value of the Congo franc at 0.0000418422 kilo of fine gold. It is divided into 100 centimes.

The Bank of Belgian Congo has been authorized to place in circulation notes in denominations of 5, 20, 50, 100, 500, and 1,000 francs.

For the purposes of local circulation the government of the colony struck divisional coins of 1 franc and 50 centimes as well as base metal coins of 20, 10, and 5 centimes.

BRITISH EAST AFRICA (KENYA AND UGANDA)

Metal and Paper Currencies

[From G. R. Wilson, American consul, July 31, 1930]

The Nigerian coinage order of 1913 stipulates that the British sovereign shall be the standard coin of Nigeria. It is possible that there may have been an earlier ruling to that effect. The value of the sovereign is approximately \$4.86. The Nigerian coinage order of February 9, 1920, mentions that the coinage shall be for use in the colony and protectorate of Nigeria, "as well as in His Majesty's other colonies, protectorates, and territories in West Africa," thereby assuring a uniform monetary system for British West Africa.

"The West African Currency Board was appointed by the Secretary of State for the Colonies in November, 1912, on the recommendation of the West African currency committee of 1911-12, to provide for and to control the supply of currency to the British West Africa colonies and protectorates."

However, the law providing a paper currency for British West Africa was the act of August 21, 1924, further and more fully defining the powers and duties of the board. Certain provisions of the act are quoted below:

"The board will have authority to make all necessary arrangements for the minting of any special coins authorized for circulation in the British West African dependencies, and to comply with applications for the supply of any coins at the time being legally current in those dependencies. It may also arrange for the supply of currency in exchange for United Kingdom silver coins now circulating in West Africa and for the repatriation of the latter coins.

"Subject to the provisions of these regulations and of any legislation from time to time in force in West Africa, the board may provide, and may issue and re-issue in West Africa, in exchange for current coin, notes hereinafter referred to as currency notes.

"A currency note shall be a promise on the part of the board to pay to the bearer on demand at a certain place (hereinafter referred to as 'the redemption centre') the amount named therein, and the amount required for such payment shall be a charge on the moneys and securities in the hands of the board."

* * * * *

Legal Tender Provisions—Coins and Notes in Circulation

These topics are fully treated in the Blue Book of Nigeria under the heading, "Legal tender currency (paper and metallic) giving particulars and legislative authority." The statement follows:

"The coins current in Nigeria are:

"United Kingdom gold, silver, and bronze coins; West African silver coins, value 2s., 1s., 6d., and 3d.; alloy coins, value 2s., 1s., 6d., and 3d.; Nigerian nickel-bronze coins, value 1d., 1/2d., and 1/10d.

"All coins which, under the coinage acts, 1870 and 1891, are legal tender in the United Kingdom, and all subsidiary coins coined in pursuance of the provisions of His Majesty's order in council, dated July 28, 1906, as amended by orders in council dated, respectively, September 9, 1907, October 19, 1908, August 2, 1910, May 7, 1913, and February 9, 1920, are current in all parts of Nigeria.

"Gold and silver coins of the United Kingdom and West African silver coins are legal tender to any amount; United Kingdom bronze coins and Nigerian nickel-bronze coins are legal tender to the extent of 1 shilling.

"The West African silver coins authorized by the Nigerian coinage order, 1913, were introduced in May, 1913 (they are being withdrawn from circulation). The Nigerian nickel-bronze coins were introduced in 1907, 1908, and 1911.

¹ In circulation throughout West Africa.

"The new alloy coins authorized by order in council, dated February 9, 1920, were introduced in July, 1920.

"Native currency in the form of cowries, manillas, and brass rods is still used in some parts, but importation thereof is prohibited, and the abolition of such native currency is being gradually effected. Ordinance No. 10 of 1919 prohibits the use by nonnatives of the manilla as currency.

"West African currency notes (£5, 20s., 10s., 2s., and 1s.) Ordinance No. 11 of 1916.

"The £5, 2s., and 1s. notes are being withdrawn from circulation.

"Nigerian currency notes (20s., 10s., and 1s.) Ordinance No. 22 of 1918. These are being withdrawn from circulation."

The preceding statement gives the complete list of coins and notes in circulation. Foreign currency is not used and is rarely seen. Coins and notes which are in more general circulation are the alloy coins: 2 shillings, 1 shilling, sixpence, and threepence; the nickel-bronze coins: penny and half-penny; and the 20-shilling and 10-shilling notes. Considerable silver is seen but it is being withdrawn from circulation. The 1/10 penny is obsolete. In respect of the purposes of this report, these are the only coins and notes that need be considered. English currency, though legal tender, is not readily accepted by the natives and there is little in circulation. The cowries is a small shell which is still used to some extent by the natives of Northern Nigeria. The manilla is a small iron object shaped like a horse shoe; it is accepted as currency by natives in some parts of the southern provinces.

Silver and note circulation as of June 30, 1929

West African silver coin.....	£2, 228, 481
West African currency notes.....	753, 588

* * * * *

The weights and fineness of the West African coins authorized by the Nigerian coinage act of 1913 are shown in the following table:

Denomination of coin	Standard weight		Standard fineness
	Imperial weight	Metric weight	
	<i>Grains</i>	<i>Grams</i>	
Florin.....	174. 5445	11. 31036	} Thirty-seven fortieths fine silver, three-fortieths alloy; or millesimal fineness 925.
Shilling.....	87. 27272	5. 65518	
Sixpence.....	43. 63636	2. 82759	
Threepence.....	21. 81818	1. 41379	

The Nigerian coinage order of 1920 authorized the coinage of "coins of mixed metal of the same denominations and of the same standard weights as those specified for the purpose of the said local silver coins in the first schedule to the order of 1913." Accordingly, the Nigerian coinage order in council (No. 2) of March 25, 1920, contains the following provisions:

"1. (1) The first schedule to the order of 1913 shall, as regards coins made or issued after such date as is fixed by the governor of the colony by proclamation, have effect as though for the words 'thirty-seven fortieths fine silver, three-fortieths alloy; or millesimal fineness 925' in the column relating to standard fineness there were substituted the words 'one-half fine silver, one-half alloy; or millesimal fineness 500,' and as though for the figure '4' in the column relating to the remedy allowance in respect of millesimal fineness there were substituted the figure '5'.

"(2) The proviso to paragraph (5) of article 2 of the order of 1913 shall have effect as though for the words 'nine hundred and twenty-five' there were substituted the words 'five hundred.'"

The new alloy coins authorized were placed in circulation in July 1920. It will be noted that though of baser metal, they are of the same weights as the West African silver coins. The latter are now being withdrawn from circulation. The weights and composition of the nickel-bronze coins are shown below.

Denomination	Standard weight		Composition
	Grains	Grammes	
One penny.....	145.83	9.45	Nickel bronze or other metal or mixed metal.
One-tenth of a penny.....	30	1.944	Do.
One-half penny.....	87.5	5.67	Do.

¹ Conversion rate: 1 Maria Theresia thaler = \$0.40329, at the 1929 average price of silver in London, \$0.53631 per fine ounce.

Estimated imports of silver coin during 1929 from Vienna, via Trieste: 2,000,000 Maria Theresia thalers (\$806,580).

Exports of silver coin to French Somaliland during 1929: 170,000 Maria Theresia thalers, (\$68,559.)

November 17, 1929, the export of silver dollars was authorized for three months. It was stopped in February, 1930. At the same time the import of this coin, previously free, was prohibited for one year.

A copper "bessa" is also now in circulation, the nominal value being 32 to 1 Maria Theresia dollar. It weighs 3.0 grams, its composition being 99½ per cent copper and ½ per cent zinc. It is minted unofficially at Addis Ababa from blanks imported from France. Blanks imported in 1929, 6,666,666.

Production of gold in 1929, per questionnaire data of United States Bureau of Mines, 5,000 vakiet (vakiet = 28 grams) = 140 kilos.

FRENCH EQUATORIAL AFRICA

Note circulation of bank on June 30, 1928, 606,099,105 francs. (From Bankers' Almanac and Year Book, 1929-1930.)

Currency of French Equatorial Africa

[From Consul Arthur F. Tower, May 5, 1930]

The official unit of currency in French Equatorial Africa is the French franc, now equal to approximately \$0.04, although there is no leagl parity. Belgian

francs circulate in the border districts, and in the northern part of the colony Maria Theresia dollars were formerly in wide use but they are now fast disappearing. Only French francs are legal tender.

* * * * *

The paper currency in common circulation is the notes of the Banque de L'Afrique Occidentale, of Dakar. These notes are issued in denominations of 5, 25, 50, 100, 500, and 1,000 francs and are payable in coin at Dakar. * * *

The metal currency of French West Africa is also used in French Equatorial Africa for the denominations of 5, 10, and 25 centimes. These coins are nickel. For the denominations of 50 centimetes, 1 franc, and 2 francs the bronze tokens issued by the Chambres de Commerce and which are current in France are used.

FRENCH WEST AFRICA

SENEGAL, FRENCH SUDAN, FRENCH GUINEA, IVORY COAST, DAHOMEY, UPPER VOLTA,
MAURITANIA, AND NIGER

The amount of notes of the Bank of French West Africa in circulation on December 31, 1929, was 558,208,560 francs.

The exports of gold from French West Africa during 1929 amounted to 65,962 grams, valued at 1,080,629 francs (\$42,361). The exports from French Guinea amounted to 63,447 grams, valued at 1,040,389 francs (\$40,783). It is believed that the entire amount went to France.

The quantity of gold produced on the Ivory Coast from dry or silicious ores and exported to France during 1928 was 17.842 fine kilos (574 ounces), valued at 356,840 francs (\$13,988).

LIBERIA

The amount of gold obtained from placer mining during 1929 was \$50.

The imports of silver coin from Great Britain during 1929 are estimated at £5,000 (\$24,332).

There is no Liberian coinage in circulation and all commercial transactions are conducted in British silver.

Metal and Paper Currencies of Mauritius Island

[From Gaston Smith, American Consul, May 19, 1930]

The rupee currency was established by proclamation 28 of 1876, which provided that "the silver rupee of India of 180 grains weight and eleven-twelfths fineness, as now legally current in India, and its silver subdivisions of proportionate intrinsic value, consisting of the half rupee, the quarter rupee, and the eighth part of a rupee, shall be the only legal tender of payment."

Proclamation 11 of 1877 declared the R. 0.20 silver coin to be a legal tender in payment of sums not exceeding Rs. 5.

Proclamation 12 of 1876 declared: The silver coin R. 0.10, the bronze coins R. 0.05 and R. 0.01 to be legal tender in payment of sums of the same amount, and proclamation 14 of 1877 declared the bronze coin R. 0.02 legal tender.

The coins of the colony in current use are: R. 1.00, one rupee; R. 0.50, half rupee; R. 0.25, quarter of a rupee, silver; R. 0.20, fifth of a rupee; R. 0.10, tenth of a rupee, silver; R. 0.05, R. 0.02, R. 0.01, bronze.

The par value of a silver Indian rupee is two shillings or \$0.4866. It was stabilized since the World War at one shilling and sixpence or \$0.5649. The rupee of Mauritius, while of the same value as the Indian, is usually quoted somewhat lower.

Indian nickel coins of four and eight annas were made legal tender in payment of sums not exceeding Rs. 5, under proclamation No. 36 of September 24, 1920.

By proclamation No. 33 of 1925 the Indian nickel coin of the value of eight annas ceased from September 7, 1925, to be a legal tender in Mauritius and the Dependencies.

Paper money.—Under ordinance No. 28 of 1876, currency notes of Rs. 5, 10, 50 are issued under the signatures of two of the commissioners of currency (colonial secretary, receiver general, collector of customs).

Indian currency notes were made legal tender under ordinance 30 of July 31, 1920.

One-rupee notes were put in circulation on April 23, 1920; they are legal tender to any amount.

During the year 1920, the currency of the colony was definitely adopted as that of India.

All persons are entitled to obtain and demand from the commissioners of currency silver rupees of India in exchange for such notes.

* * * * *

The stock of notes on December 31, 1927, according to the statement issued by the commissioners of currency, published in Government Gazette No. 8 of February 4, 1928, amounted to Rs. 23,775,583. The amount in the hands of the commissioners was: Notes, Rs. 9,552,333; specie, Rs. 4,344,000. The notes in circulation amounted to Rs. 3,979,484.

The estimated specie in circulation at the end of 1927 was about Rs. 15,557,400, to which should be added Rs. 1,598,387 of bullion and specie introduced up to December 31, 1927.

Imports of silver coin during 1929: From northern Rhodesia, £7,000 (\$34,065); from South Africa, £22,150 (\$107,793).

Exports of silver coin during 1929 to South Africa, Portuguese East Africa and Rhodesia, £14,850 (\$72,267).

PORTUGUESE EAST AFRICA—MOZAMBIQUE

The quantity of gold and silver produced from placer mining during 1929 was as follows: Gold, 375 ounces, valued at £1,897 (\$9,232); silver, 54 ounces, valued at £5 (\$24).

The actual currency consists of Mozambique escudos and Banco Nacional Ultramarino libras.

The amount of notes of banks of issue used for monetary purposes on December 31, 1929, was 77,529,006 Mozambique escudos. At the current (August, 1930) rate of exchange, 100 escudos equal £1 Portuguese sterling or British sterling.

The average premium on gold in 1929 was 1½ per cent.

PORTUGUESE WEST AFRICA

ANGOLA

The amount of notes of banks of issue in circulation on December 31, 1929, was 51,207,623 angolars. These notes are not redeemable in gold.

Monetary System

Decree 14 : 921 (January 20, 1928) establishes a new monetary system in Angola.

A decree published by the Minister of Colonies will announce the day on which the new system becomes effective.

The new unit of account, the angolar (Ag.) is equal to the gold escudo as defined by the decree of May 22, 1911. The submultiple of the angolar will be the centavo.

The angolar will be physically represented by coins or cédulas in denominations of 1, 2½, 5, and 10 Ags., legal tender to any amount, and its submultiples by nickel, copper-nickel or other alloy coins (legal tender up to twenty times their face value), in denominations of 0.50, 0.20, 0.10, 0.05 Ags., corresponding to 10, 4, 2, and 1 macutas, respectively (1 macuta = 5 centavos), and by copper coins in denominations of 0.02, 0.01, and 0.005 Ags.

The dimensions, fineness, design, and composition of the new coins will be determined by the monetary commission of Angola.

The coins and cédulas of 1 Ag. or more will be regarded as the principal coins, and those of 0.50 Ag. or less will be regarded as subsidiary coin.

Decree 15 : 756 (July 20, 1928) fixes August 1, 1928, as the day on which the new money, expressed in angolars and established by decrees No. 12 : 124 (August 14, 1926) and 14 : 921 (January 20, 1928), shall be placed in circulation in Angola.

The old money will be exchanged at the rate of 100 old units or Angola escudos to 80 new units or angolars.

CAPE VERDE ISLANDS

Currency

[From American Consul General, May 21, 1930]

By contract with the Portuguese Government, under the terms of decree 17,154 of July 26, 1929, the Banco Nacional Ultramarino became the bank of issue for all Portuguese colonies, except Angola, for a period of 30 years beginning August 5, 1929.

The maximum circulation of notes of the Banco Nacional Ultramarino in the Cape Verde Islands was fixed by the decree at 20,000,000 escudos (the exchange value of which is less than \$1,000,000). The nominal value of the total of notes in circulation can not exceed three times the amount of the "monetary reserve" prescribed by the decree. This reserve is to be composed of—

- (a) Notes of the Bank of Portugal.
- (b) Coins that are legal tender for any amount.
- (c) Balances that the bank may have in other banks.
- (d) Bonds of the colony, of the Banco de Fomento Colonial, or of the Caixa Nacional de Crédito.

* * * There are no coins of any sort.

The notes issued by the Banco Nacional Ultramarino for the Cape Verde Islands are: 100 escudos, 50 escudos, 20 escudos, 10 escudos, 5 escudos, 1 escudo.

There is subsidiary paper money of smaller denominations, namely, 50, 20, 10, and 5 centavos. The banks state that the Government has decided to have coined for Cape Verde Islands coins of facial value of 50, 20, and 10 centavos containing 10.5, 4.5 and 2.5 grams, respectively, of an alloy composed of 61 per cent copper, 19 per cent nickel, and 20 per cent zinc. * * *

Per questionnaire data of United States Bureau of Mines, gold 435.7 crude ounces valued at £1,600 (\$7,790).

Metal and Paper Currency of Southwest Africa

[From Garret G. Ackerson, jr., vice consul, July 11, 1930]

The official unit of currency of Southwest Africa is the pound sterling, which has a value of \$4.8665 to the pound.

The laws of the Mandate dealing with currency are proclamations No. 3 of 1922 and No. 13 of 1925. * * *

Coins and notes comprised in the legally recognized currency system of the Mandate, all of which are in general circulation, are the same as those of the Union of South Africa. The coins are the halfpenny, the penny, the threepenny (tickey), the sixpenny, the shilling, the two-shilling (florin), the two and sixpenny (half-crown), the ten-shilling, and the pound. Paper notes in circulation include the ten-shilling, pound, five-pound, twenty-pound, and hundred-pound notes.

* * * The principal form of currency apart from silver and copper consists of Barclay's Bank and Standard Bank notes. Rhodesian issues of these are in practice accepted as good tender, although if technical exception were taken they could not be regarded as legal tender. While Union Reserve Bank notes are legal tender, there are very few of them in circulation in the Mandate.

Proclamation No. 3 of 1922

1. From and after the taking effect hereof all existing laws of the Imperial German Government or the Imperial German Governor of Southwest Africa operative in the Territory of Southwest Africa relating to currency shall be and are hereby repealed.

2. (1) Repealed by proclamation 13 of 1925 and new section substituted (below).

4. Gold certificates issued under the provision of the currency and banking act 1920 of the Parliament of the Union of South Africa shall be legal tender in the said Territory for payment of any amount up to the face value of such certificate.

5. This proclamation shall be known and may be cited as the "Coinage and legal tender proclamation 1922" and shall come into operation upon the first day of May, 1922.

No. 13 of 1925

* * * * *

2. Subsection (1) of section 2 of the principal proclamation¹ is hereby repealed and the following new subsection (1) is hereby substituted therefor:

"(1) From and after the taking effect hereof a tender of payment of money, if made in coins which are Union coins, British coins or Transvaal coins as defined by the coinage act, 1922 (Act No. 31 of 1922) of the Parliament of the Union of South Africa and which are valid for the purposes of legal tender under the provisions of the said act, shall be legal tender—

(a) In the case of gold coins, for the payment of any amount;

(b) In the case of silver coin, for the payment of an amount not exceeding 40 shillings, but for no greater amount;

(c) In the case of bronze coins, for the payment of an amount not exceeding 1 shilling, but for no greater amount."

* * * * *

4. This proclamation, which shall be read as one with the principal proclamation, may be cited for all purposes as the "Coinage legal tender amendment proclamation, 1925," and shall come into operation on the first day of July, 1925.

Imports of gold and silver from Great Britain during 1929: Gold bullion, £1,232 (\$5,995); silver coin, £271,852 (\$1,322,968).

Exports of gold and silver to Great Britain during 1929: Gold bullion, £38,521 (\$187,462); silver bullion, £109 (\$530).

TUNIS

Imports of gold and silver bullion from France during 1929: Gold, 4 kilos (129 ounces); silver, 2,306 kilos (74,138 ounces).

Bank of Algeria notes circulating in Tunis, 500,000,000 francs (average). (From Supplément Colonial de L'Economiste Européen, Paris, March 21, 1930.)

Monetary Laws of Tunis

Decree of May 2, 1929

[From Journal Officiel Tunisien, May 22, 1929]

ARTICLE 1. The provisions of article 2 of the decree of August 1, 1914, establishing temporarily the rate of exchange of the bank notes of the "Banque de l'Algerie," are hereby abrogated.

ART. 2. The franc, the Regency's monetary unit, is to be represented by 65.5 milligrams of gold at a standard of nine hundred thousandths of pure gold.

ART. 3. The "Banque de l'Algerie" has the duty to insure the convertibility to the bearer at sight in gold of its notes at the monetary parity indicated in article 2 above, either in reimbursing its notes in gold coins of legal tender, or in exchanging them against gold at the rate of 65.5 milligrams of gold at a standard of nine hundred thousandths pure gold per franc.

It has the right of making such reimbursements of exchanges only at its office in Tunis or head office in Paris, as it chooses, and for minima quantities which will be determined between our Director General of Finances and the "Banque de l'Algerie."

ART. 4. The French administration of coins and medals will manufacture 100-franc gold pieces at a standard of nine hundred thousandths of pure gold.

The standard allowance is net at one thousandth above or under. The weight allowance is fixed at two thousandths above or under.

These coins will be unrestricted legal tender. They will bear on one side in Arabic characters our monogram, a statement of the franc value and the date of the Arab year in which manufactured; on the other side, in French characters, the word: "Tunisie," a statement of the franc value, and the date of the Gregorian year in which manufactured.

ART. 5. The date on which these coins shall be manufactured and placed in circulation will be determined by the Director General of Finances.

ART. 6. There will also be struck by the French administration silver coins of a nominal value of 10 and 20 francs, the standard being six hundred and eighty thousandths, for a total not exceeding 150,000,000 francs.

The weight of these silver coins is fixed at 10 grams for the pieces of 10 francs and 20 grams for the pieces of 20 francs.

The standard allowance will be five thousandths for the weight and the same allowance for the metal content.

At the end of every accounting period, one-third of the profit resulting from the coining of silver moneys will be placed in a reserve fund destined for the maintenance of the money circulation; the other two-thirds will be absorbed by the general budget of the State.

In payments between individuals, 250 francs is the maximum sum of silver money that the payee shall be obligated to accept.

The types of the new gold and silver pieces will be determined by decree.

ART. 7. Our moneys can only be struck for the account of the Government.

ART. 8. The provisions of the decree of December 21, 1921, relating to aluminum-bronze tokens; those of October 5, 1918, regarding nickel, as also those of July 1, 1891, regulating bronze tokens, are retained integrally.

ART. 9. Following the promulgation of this decree, all gold and silver moneys coined before the date of promulgation will no longer be legal tender between individuals or be accepted by the public banks.

ART. 10. Other decrees also abrogated are those of—

(a) August 2, 1914, prohibiting the exportation of gold and silver money and paper currency.

(b) July 16, 1915, prohibiting the exportation of gold.

(c) December 3, 1915, prohibiting the exportation of raw silver.

(d) January 23, 1922, prohibiting the exportation of French and Tunisian bronze-aluminum tokens.

(e) January 21, 1916, relating to the repression of the traffic in French and Tunisian moneys.

(f) October 30, 1919, relating to the maintenance of the provisions of the decree of February 21, 1916, relating to the repression of the traffic in French and Tunisian moneys even after the ending of the state of war.

(g) October 30, 1919, prohibiting the melting or mutilating of French or Tunisian gold coins.

(h) July 18, 1891, relating to the provisions which are contrary to the present decree.

Metal and Paper Currencies of Tunis

[From Consul Leland L. Smith, May 24, 1930]

The official unit of currency in Tunisia is the franc. The Banque de l'Algerie, whose directing offices are in Algiers and Paris, has the franchise as bank of emission until December 31, 1945, for Algeria and the Regency of Tunisia.

* * *

The par value of the Tunisian or Algerian franc is identical to that of the French franc and the currencies of the three countries circulate throughout both Provinces without distinction. The Tunisian and Algerian currencies have the same value in relation to foreign exchange as that of the French franc, which dictates the rate of exchange. * * *

The only foreign currency to circulate to any extent is the French currency, which is brought into the country by the many travelers arriving continually from France. * * *

The coins are: 2 francs; 1 franc; 50 centimes; 25 centimes; 10 centimes; 5 centimes. * * *

8. According to the latest statement of the Banque de l'Algerie, the amount of paper currency issued for Tunisia (Algerian notes are stamped with the word "Tunisia") attained 520,111,905 francs. * * *

Note Circulation

[From Fiji Blue Book for the year 1928, page 138; 1929, page 142]

Paper money in circulation on December 31, 1928: Colonial Government notes, £431,583; Australian bank notes, £908; total notes, £432,491.

NEW GUINEA, AUSTRALASIAN

The quantity of gold produced from placer mining during 1929 was 72,623 ounces, valued at £154,116 (\$750,005).

Imports of silver coin from Australia during 1929, £3,662 (\$17,821).

Exports of gold ore to Australia during 1929 (estimated), £136,177 (\$662,705).

Laws Affecting the Currency

The currency coinage and tokens ordinance, 1922, forbids the use of German coinage and currency as well as the use of tokens and counters.

Exception to the application of the coinage act, 1909: In that part of the coast of New Britain lying between Cape Merkus and Cape Dampier and in the hinterland adjoining that coast, the shell known as gold-lip (*Meleagrina margaretifera*) may be used by any person at the rate of 12 shillings a pair in place of legal tender for any purpose except for the purchase, sale, barter, or exchange of Trocas shell.

REPORT OF THE DIRECTOR OF THE MINT

The currency coinage and tokens ordinance, 1928, authorizes the administrator to issue cupro-nickel coins in the denominations of 1 penny and 1 half-penny, the size of a shilling and a sixpence, respectively, without milled edge, perforated in the center, and legal tender up to 5 shillings.

The currency coinage and tokens ordinance, 1930, amends the currency coinage and tokens ordinance, 1922-1928, by adding at the end thereof the following schedule:

Second schedule

Denomination	Standard weight (grains)	Composition
Cupro, nickel:		
Penny	70 35	} Mixed metal, copper, nickel.
Halfpenny		

NEW GUINEA, BRITISH (PAPUA)

The quantity of gold produced during the year ended December 31, 1929, was £7,343 (\$35,735).

SOCIETY ISLANDS

Approximate stock of notes of banks of issue used for monetary purposes on December 31, 1929. In home government treasuries, 141,160 francs; in circulation, 12,501,235 francs; total used for monetary purposes, 12,501,235 francs.

The actual currency consists of paper francs, valued at about 4 cents each.

Premium on gold in 1929: Highest, 25.30 francs to the dollar; lowest, 26.15; average, 25.725.

Metal and paper currency of Society Islands

[From United States Consular report by William. P. Garrety, May 29, 1930]

The official unit of currency in French Oceania is the franc. One dollar equals 25.52 francs. * * *

The above law provides that legal payments may be made either in bank notes of the Banque de l'Indo-Chine or with checks on the bank of the colony. Foreign currency circulates to a small extent without legal status.

The following notes are legally recognized and in general circulation: 500 francs, 100 francs, 20 francs, and 5 francs. The following coins are also legally recognized and in the general circulation: 2 francs, 1 franc, 0.50 franc. * * * Centime coins in general circulation are of 25, 10, and 5 centimes.

A few foreign notes are in circulation, namely, of the United States Federal reserve banks, New Zealand banks, Bank of England, Banque de France, and Australian banks.

The metal currency is the same as that of France.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEARS 1928 AND 1929

The following compilations have been made from such data as are available—see page 152. The amount of gold and silver in circulation in many countries is not obtainable, and in some countries that held by private banks can not be given.

For the United States the figures given cover all domestic gold and silver coin, but only such bullion and foreign coins as owned by the Government and Federal reserve banks. All foreign coin which comes into possession of the Government is converted into bullion. Population figures are principally from United States Commerce Yearbook, 1929.

Monetary stock of principal countries of the world, end of calendar year 1928

¹ In part held abroad, either reported as earmarked (set aside and not included in the claimed assets of the holding institution, as opposed to being merely deposited abroad or representing a receivable balance) or considered to be earmarked by U. S. Federal Reserve Board experts.

² Includes some silver.

³ Includes base metal coin.

⁴ Estimated silver circulation included.

⁵ Includes some gold.

⁶ Prior year's figures.

⁷ United States bank notes.

⁸ United States Government notes.

⁹ Exclusive of Canadian bank notes which are the principal circulating media.

¹⁰ Panama coin only. In addition to this, there is circulating an unknown amount of silver.

¹¹ United States currency.

¹² Equivalent of old milreis; new valuation at \$0.1196+ not yet fully established.

¹³ On Dec. 27.

¹⁴ Exclusive of Spanish bank notes and British treasury notes.

¹⁵ British currency.

¹⁶ Includes platinum.

¹⁷ Estimate.

¹⁸ Incomplete.

¹⁹ Fluctuates with the price of silver.

²⁰ Monetary standard not established.

²¹ Mar. 21, 1930 (end of Persian year).

²² Sarawak coin and notes; Straits coin and notes also circulate.

²³ June 30, 1929.

²⁴ May, 1930.

²⁵ Australian notes.

²⁶ In Trinidad dollars.

²⁷ Almost the entire amount held abroad.

²⁸ Paper peso currency legally convertible at 44% of face value.

²⁹ Value of paper currency fixed at 4.567 paper milreis to the gold milreis (\$0.1196) for payment of public dues.

³⁰ From United States Mint interrogatories and/or published official sources.

³¹ Includes, in addition to holdings of central banks and governments, holdings of other banks where authenticated.

³² Data known to be incomplete.

WORLD PRODUCTION OF GOLD AND SILVER

World production of gold and silver, 1928 and 1929

[The production figures given below are based upon the preceding data (see p. 152) and those published in prior issues of the report of the Director of the Mint]

¹ At the average par price of a fine ounce of silver in London, excepting the years 1918 to 1922, inclusive, for which the mean of the New York bid and asked prices was used.

Production of gold and silver in the world since the discovery of America

[From 1493 to 1885 is from a table of averages for certain periods, compiled by Dr. Adolph Soetbeer; for the years since, the production is the annual estimate of the Bureau of the Mint]

Period	Gold				Silver				Percentage of production			
	Annual average for period		Total for period		Annual average for period		Total for period		By weight		By value	
	Fine ounces	Value	Fine ounces	Value	Fine ounces	Coining value	Fine ounces	Coining value in standard silver dollars	Gold	Silver	Gold	Silver
1493-1520	186,470	\$3,855,000	5,221,160	\$107,931,000	1,511,050	\$1,954,000	42,309,400	\$54,703,000	11	89	66.4	33.6

REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 20, 1928.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1928, being the fifty-sixth annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1927.

OPERATION OF THE MINTS AND ASSAY OFFICES

INSTITUTIONS OF THE MINT SERVICE

During the fiscal year ended June 30, 1928, 10 mint-service institutions were in operation; coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which makes large sales of fine gold bars; mints at New Orleans and Carson City conducted as assay offices; and assay offices at Boise, Helena, Seattle, and Salt Lake City. The six last-named institutions are, in effect, bullion-purchasing agencies for the large institutions and also serve the public by making assays of ores and bullion. Electrolytic refineries are operated at the New York, Denver, and San Francisco institutions.

COINAGE

During the fiscal year ended June 30, 1928, the features as regards coinage have been the considerable demand for gold coin for export and reduced requirement of coins below the dollar for home circulation, with completion of the silver dollars made for replacing the coins melted for use during the World War. The total value of domestic coinage executed was \$262,356,797, for 252,776,335 pieces, as compared with the prior year's \$102,653,129.50 for 310,960,019 pieces. There was thus increased value of \$159,703,667.50 on 58,183,684 fewer pieces. The value of this fiscal year's domestic gold coinage was \$249,595,000; silver dollars, \$2,018,649; subsidiary silver, \$6,937,418; nickel, \$2,315,850; bronze, \$1,489,880. The mints at Philadelphia, San Francisco, and Denver all made gold, silver, nickel, and bronze coins, but no silver dollars were made this year by the Denver Mint.

Coin for foreign governments was made during the past fiscal year only at the Philadelphia Mint; it consisted of Ecuadorian silver 2-sucre pieces, 320,000, and 1-sucre pieces, 1,120,000; and Nicara-

guan silver 25-centavo pieces, 200,000, 10-centavo pieces, 250,000, nickel 5-centavo pieces, 100,000, and bronze 1-centavo pieces, 500,000; total foreign coinage, 2,490,000 pieces.

Combined domestic and foreign pieces coined this fiscal year total 255,266,335, as compared with 318,059,019 pieces the year before. The supply of coins in the Treasury has been kept in safe advance of the demands of the public.

GOLD OPERATIONS

Gold acquired by the Government at the several mint-service institutions during the fiscal year 1928 totaled \$177,774,995.60. United States gold coin received by the mints for recoinage amounted to \$2,216,232.43; transfers of gold between mint offices totaled \$231,983,809.30; the aggregate amount of gold received by the several mint-service institutions during the fiscal year 1928 was \$411,975,037.33, which compares with \$238,773,524.60 during the prior year.

SILVER OPERATIONS

Receipts of purchased silver during the fiscal year 1928 totaled 5,568,967.37 fine ounces, the average cost of which was 57.09 cents per ounce, total cost being \$3,179,578.24. Of this amount of 5,568,967.37 fine ounces, a total of 2,492,013 was silver contained in gold deposits. Silver received in exchange for bars bearing the Government stamp totaled 791,516.86 fine ounces; United States silver coin received for recoinage totaled 2,818,357.02 fine ounces, the recoinage value being \$3,896,121.68; silver deposited in trust by other governments totaled 642,585.27 fine ounces; and transfers between mint-service offices totaled 543,661.40 fine ounces, making the aggregate quantity of silver received by the several mint-service offices during the fiscal year 10,365,087.92 fine ounces, as compared with 11,626,939.85 ounces during the prior year.

The New York market price of silver during the fiscal year ended June 30, 1928, averaged \$0.5757; the lowest price was \$0.544375 on August 8, 11, and 22, 1927, and the highest price \$0.639375 on May 24, 1928.

SILVER TRANSACTIONS UNDER THE ACT OF APRIL 23, 1918, KNOWN AS THE PITTMAN ACT

During the fiscal year 1928 recoinage of the silver dollars, melted under the terms of the Pittman Act, was completed. A résumé of the Treasury's silver operations under this act follows.

The Pittman Act.—The act of April 23, 1918, was entitled "An act to conserve the gold supply of the United States; to permit the settlement in silver of trade balances adverse to the United States; to provide silver for subsidiary coinage and for commercial use; to assist foreign governments at war with the enemies of the United States; and for the above purposes to stabilize the price and encourage the production of silver." At the time of the passage of the act, Great Britain was in urgent need of the precious metals for use in India. The only possible source of sufficient silver to meet the war emergency was the United States Treasury stock of silver dollars. Congress therefore passed the act of April 23, 1918, which authorized

the melting or breaking up and sale as bullion of not to exceed 350,000,000 silver dollars from the large stock of silver dollars in the United States Treasury. The act also authorized the use of silver dollars and of silver purchased under the act for the manufacture of domestic subsidiary silver coins (halves, quarters, and dimes); the sale of silver bullion for commercial use and for conserving the gold supply of the United States and permitting the settlement in silver of trade balances adverse to the United States. Provisions also were made in the act for the retirement of a corresponding amount of silver certificates outstanding against the silver dollars melted; for the issuance of Federal reserve bank notes to prevent contraction of the currency on account of the retirement of silver certificates; for the purchase of domestically produced silver at the fixed price of \$1 per ounce; for the recoinage of the dollars melted; and, upon recoinage, for the retirement of the Federal reserve bank notes.

Silver dollars melted.—Melting of silver dollars was commenced immediately after the act was passed, and was vigorously prosecuted at the Philadelphia and San Francisco Mints and at the New York assay office, until in May, 1919, 259,121,554 silver dollars had been melted and the 200,032,325.64 fine ounces of bullion resulting therefrom had been sold to Great Britain. The bullion was sold to Great Britain at \$1 per fine ounce, plus a charge estimated to cover the cost of melting, recoinage, and other incidentals, with the intent that the United States Government should neither gain nor lose by the transaction. In addition to the 259,121,554 silver dollars so melted and sold to Great Britain, 11,111,168 silver dollars were melted and assigned for subsidiary silver coinage. However, this transaction was subsequently canceled, and the silver dollars so melted were replaced with silver dollars coined from silver in kind. There follows a statement showing in detail the number of dollars melted:

Amounts and sources of dollars converted into bullion for sale to Great Britain

Items	Philadelphia Mint	San Francisco Mint	New York assay office	Total
Sources of coin converted to bullion:				
Mint stock.....	\$58,534,554.00	\$39,001,000.00	-----	\$97,535,554.00
Transferred from Treasury at Washington.....	87,686,000.00	25,000,000.00	-----	112,686,000.00
Transferred from Subtreasury at New York.....	-----	-----	\$26,500,000.00	26,500,000.00
Transferred from New Orleans Mint.....	12,400,000.00	10,000,000.00	-----	22,400,000.00
Face value of dollars converted for sale.....	158,620,554.00	74,001,000.00	26,500,000.00	259,121,554.00
Fine ounces sold the British Government at \$1 per ounce.....	122,527,558.54	57,176,287.40	20,328,479.70	200,032,325.64
Loss by conversion and sale.....	-----	-----	-----	59,089,228.36

Weight and value of 11,111,168 silver dollars assigned for subsidiary coinage, and the mints to which they were assigned

Items	Fine ounces	Face value
September, 1918, San Francisco Mint (uncirculated coin at \$1 per fine ounce).....	772,997.89	\$1,000,000
November, 1919, Philadelphia Mint (uncirculated coin at face value, \$1.29+ per fine ounce).....	7,734,375.00	10,000,000
November, 1920, Denver Mint (circulated coin at \$1.29+ per fine ounce).....	82,357.24	111,168
Totals.....	8,589,730.13	11,111,168

The total number of silver dollars melted, including the 11,111,168 assigned for subsidiary coinage, was 270,232,722. Many of the dollars melted had been in circulation and had become reduced below legal weight by abrasion, and an appropriation to cover this loss was made in the act of April 23, 1918.

Purchase of silver bullion.—The purchase of domestically produced silver bullion for replacing the silver dollars converted to bullion and sold to Great Britain was commenced in May, 1920, and all purchases of silver required to replace the silver dollars so sold were completed in June, 1923, with the exception of about 190,000 ounces representing incomplete deliveries of amounts accepted up to June, 1923. Deliveries on account of the 190,000 ounces were completed in July, 1927. The quantity of silver required for recoinage 259,121,554 silver dollars of exact legal silver content, disregarding the question of operative losses, was 200,414,327.07 fine ounces. Monthly receipts of purchased silver by the mint service institutions during the 3-year period from May, 1920, to June, 1923, averaged approximately 5,000,000 ounces, the purchases absorbing practically the entire silver production of the United States for this period. These purchases were made at the fixed price of \$1 per fine ounce, while the market rate during this time was usually below 70 cents.

In October and December, 1920, a total of 6,000,000 fine ounces of silver bullion purchased under section 2 of the act of April 23, 1918, were assigned to the subsidiary coinage account of the Philadelphia Mint for subsidiary coinage. However, 4,341,753.61 ounces of this silver were not used for that purpose, and the orders assigning that amount for subsidiary coinage were revoked in February, 1922, and the silver bullion was restored to the Pittman silver account. The order covering the balance of the 6,000,000 ounces of bullion, that is, 1,658,246.39 ounces, and also the order assigning 11,111,168 silver dollars to the Director of the Mint for conversion into subsidiary silver coins were revoked in December, 1922, on the authority of a decision of the Comptroller General of the United States, dated November 29, 1922, which was subsequently affirmed by him in his ruling of September 4, 1923, addressed to Hon. Key Pittman, vice chairman of the Senate Committee of Gold and Silver Inquiry.

When the 11,111,168 silver dollars and the 6,000,000 ounces of silver bullion, referred to, were assigned to the subsidiary coinage accounts, and at all times during the period that this silver was so assigned, there was on hand in the mint service institutions, in the subsidiary silver accounts of the mint service, a sufficient quantity of silver bullion procured for subsidiary coin manufacture to take care of the subsidiary coinage requirements of the Government. At the time of such assignments, the bullion was either not located in the institutions where required for use or it was in an unrefined state, although, as stated, there was a sufficient quantity on hand in the subsidiary coinage accounts. By canceling the orders assigning the 11,111,168 silver dollars and the 1,658,246.39 ounces of bullion for subsidiary coinage, the Government avoided purchasing more silver than was actually needed for subsidiary coinage and for carrying out the provisions of the Pittman Act.

Recoinage.—Recoinage of the 270,232,722 silver dollars melted, which amount includes the 11,111,168 silver dollars assigned for subsidiary coinage, was completed in April, 1928. Such recoinage was begun in February, 1921, which was as soon as postwar demands

for other coins that were in active circulation permitted, and continued whenever the mint facilities were available for the purpose, until April, 1928, when, as stated, all of the silver dollars melted had been recoined. The currency situation is now the same as before the passage of the act of April 23, 1918, so far as operations under that act are concerned, and the monetary stock of United States silver dollars was neither decreased nor increased by that act.

The cost of coining (recoining) silver dollars is approximately \$10 per thousand. A table showing the recoinage by fiscal years of silver dollars under the act of April 23, 1918, follows:

Fiscal year ending June 30—	Recoined during fiscal year	Fiscal year ending June 30—	Recoined during fiscal year
1921-----	\$19, 043, 000	1926-----	\$11, 432, 700
1922-----	92, 388, 473	1927-----	4, 456, 900
1923-----	110, 715, 000	1928-----	2, 018, 649
1924-----	11, 870, 000		
1925-----	18, 308, 000	Total-----	270, 232, 722

REFINERIES

The mint-service refineries that are operated at New York, Denver, and San Francisco produced 2,396,394 fine ounces (82.16 tons) of electrolytically refined gold during the past fiscal year, which compares with 94.35 tons in the prior year, and 3,153,131 fine ounces (108.1 tons) of electrolytically refined silver, which compares with 126.5 tons during the prior year.

The stock of gold and silver in unrefined bullion on hand was reduced during the past year by about 6 tons to 431 tons, as compared with the prior year's reduction of about 45 tons. The Denver refinery operated only during the last half of the fiscal year, as during the prior year.

ADDITIONS AND IMPROVEMENTS

At the Philadelphia Mint a chromium plating plant has been installed and is being used for greatly improving the wearing qualities of dies, coin collars, machinery parts, and models. A new type of reducing machine has greatly facilitated the preparation of more perfect coin and medal dies. Improvements have been made whereby the time required for finishing medals by sandblast has been reduced by one-half. The handling of ingots, bars, and metal offal by hand has been discontinued where practicable, and handling in bulk, at the scales and elsewhere, by mechanical processes substituted. Mechanical handling has also been applied to nickel coinage metal, which is purchased in the form of shot. Improvements have also been made in the construction of coin presses and automatic weighing machines, and in the method of cleaning silver coin blanks.

At the San Francisco Mint a new chloride room was built in the refinery, with gas-tight walls lined with $\frac{1}{4}$ -inch-thick "transite" board sealed with an acid-resisting cement and fastened with Monel metal screws, and fitted with similarly constructed hoods and vitrified salt-glazed flues for preventing the escape of acid fumes to other parts of the institution. Special care was taken to make the floor both water and acid proof.

At the Denver Mint melting furnaces have been rebuilt for the use of oil or gas, or the combined use of these fuels, and for the pre-heating of both air and fuel by the waste gases of the furnaces. The

type of furnace which has been developed has produced marked reduction in the time required for making a melt, considerable reduction in the amount of fuel used, economies in the life of crucibles and furnace linings, more uniform alloys, and decided reduction in the temperature of the melting rooms, with more comfortable and healthful conditions for the operators. The completion of the natural-gas line from Amarillo, Tex., has made possible the use of gas of higher heat value, replacing the manufactured gas formerly used.

At the Philadelphia and Denver Mints and New York Assay Office sweeps and waste materials are prepared for sale at much less cost than in the past without attempt, as heretofore, to recover a material portion of the gold and silver content thereof, since commercial concerns are equipped to work such materials more economically.

COMMEMORATIVE COIN

The Hawaiian half-dollar silver coin was authorized by act of Congress approved March 7, 1928, to commemorate the one hundred and fiftieth anniversary of the discovery of Hawaii by Capt. James Cook. The design of the model was based upon a sketch submitted by Miss Juliette May Fraser, a Honolulu artist, through the Cook Sesquicentennial Commission, of Honolulu, Hawaii, suggesting the composition for the coin, and the model was executed by Mr. Chester Beach, sculptor. On the obverse it carries a likeness of Capt. James Cook, with his name as the "Discoverer of Hawaii"; also legends and inscriptions required by basic law, including the words "Half Dollar." On the reverse is the likeness of a native chief, with flowing robe and spear, gaining the summit of a hill and extending his hand in welcome; behind him is a coconut tree and in the distance a Hawaiian village of grass huts along Waikiki Beach at the foot of Diamond Hill. The dates 1778-1928 appear, also the legend "E Pluribus Unum."

STOCK OF COIN AND MONETARY BULLION IN THE UNITED STATES

On June 30, 1928, the estimated stock of domestic coin in the United States was \$2,284,650,422, of which \$1,328,989,679 was gold, \$539,961,701 standard silver dollars, \$299,010,231 subsidiary silver coin, and \$116,688,811 minor coin.

The stock of gold bullion in the mints, assay offices, and Federal reserve banks on the same date was valued at \$2,780,173,216, a decrease during the year of \$480,455,059; the stock of silver bullion was 10,866,021.04 fine ounces, an increase of 1,797,671.16 fine ounces.

PRODUCTION OF GOLD AND SILVER

Domestic gold production during the calendar year 1927 was \$45,418,600, as compared with \$48,269,600 in 1926. The output has declined to under 45 per cent of that for the record year 1915, when the total was \$101,035,700.

Silver of domestic production during 1927 totaled 60,434,441 ounces, valued at \$34,266,328; this compares with 62,718,746 ounces, valued at \$39,136,497, for 1926, and with the record production of 1915, 74,961,075 fine ounces, valued at \$37,397,300.

HAWAIIAN SESQUICENTENNIAL HALF DOLLAR

INDUSTRIAL CONSUMPTION OF GOLD AND SILVER

Gold consumption in the industrial arts during the calendar year 1927 is estimated at \$59,318,728, of which \$32,857,491 was new material.

Silver used in the arts is estimated at 38,648,717 fine ounces, of which 28,493,290 fine ounces was new material.

As compared with the prior year, silver consumption was about 750,000 ounces less, and gold consumption decreased about \$15,000,000.

IMPORT AND EXPORT OF DOMESTIC GOLD COIN

The net export of domestic gold coin during the fiscal year ended June 30, 1928, was \$218,739,072; during the prior fiscal year there was net export of \$5,500,953. During the 14 fiscal years 1915-1928, since the opening of the World War, there has been a net export of \$1,159,958,251. Since 1870 the net export of domestic gold coin has been \$2,037,607,315, as per tabulation by fiscal years, which may be found in another section of this volume.

APPROPRIATIONS, EXPENSES, AND INCOME

Appropriations available for mint service during the fiscal year 1928 totaled \$1,681,950, and reimbursements to appropriations for services rendered amounted to \$37,617.16, making a total of \$1,719,567.16.

Expenses amounted to \$1,682,260.46, of which \$1,627,202.87 was chargeable to appropriations and \$55,057.59 chargeable to income.

For the fiscal year 1929 the Congress, with the concurrence of the Treasury Department, consolidated the 20 appropriations for the 10 mint-service field institutions into four appropriations. This adds to administrative flexibility and reduces accounting work.

The income realized by the Treasury from the mint service aggregated \$6,408,493.98, of which \$5,935,092.15 was seigniorage. The seigniorage included \$457,267.23 on the coinage of silver dollars, which amount offsets an equal loss which was incurred when the silver dollars were melted and sold under the terms of the Pittman Act. The seigniorage on subsidiary silver coin was \$2,293,468.10; on nickel coin, \$1,888,382.91; and on bronze coin, \$1,295,973.91.

Summary of appropriations, expenses, and balances, fiscal year 1928

Items	Salaries and wages	Contingent expenses	Transportation of bullion and coin	Total
Appropriations.....	\$1,342,470.00	\$316,100.00	\$23,380.00	\$1,681,950.00
Earnings credited appropriations.....	24,368.66	13,248.50	-----	37,617.16
Total available.....	1,366,838.66	329,348.50	23,380.00	1,719,567.16
Expenses.....	1,324,170.82	279,925.18	23,106.87	1,627,202.87
Unexpended balances.....	42,667.84	49,423.32	273.13	92,364.29

DEPOSITS OF GOLD AND SILVER, INCOME, EXPENSES, AND EMPLOYEES, BY INSTITUTIONS, FISCAL YEAR 1928

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1928, and the number of employees on June 30, 1928, at each institution, are shown in the following table:

Institutions	Number of deposits of gold and silver	Number of mint service transfers	Coining value of gold and silver received ¹	Gross income	Gross expense	Excess of income (+) or of expenses (-)	Employees, June 30, 1928
Philadelphia.....	10,650	34,512	\$245,425,007.21	\$3,942,016.31	\$747,507.44	+\$3,194,508.87	324

¹ Gold valued at \$20.67+ per fine ounce, silver for standard dollars valued at \$1.29+ per fine ounce, and silver for subsidiary coin at \$1.38+ per fine ounce.

COINAGE

Details of the coinage executed during the fiscal year ended June 30, 1928, are given below:

Denomination	Philadelphia	San Francisco	Denver	Total	
				Value	Pieces
Double eagles.....	\$210,205,000	\$34,820,000	\$3,600,000	\$248,625,000	12,431,250
Quarter eagles.....	970,000	-----	-----	970,000	388,000
Total gold.....	211,175,000	34,820,000	3,600,000	249,595,000	12,819,250
Silver dollars.....	360,649	1,658,000	-----	2,018,649	2,018,649
Half dollars (regular).....	-----	1,801,000	-----	1,801,000	2,602,000
Half dollars, (Hawaii).....	5,004	-----	-----	5,004	10,008
Half dollars (Oregon Trail).....	25,014	-----	-----	25,014	50,028
Quarter dollars.....	2,438,000	-----	244,100	2,682,100	10,728,400
Dimes.....	1,923,000	522,000	479,300	2,924,300	29,243,000
Total silver.....	4,751,667	3,481,000	723,400	8,956,067	44,652,085
5-cent, nickel.....	1,512,850	355,600	-----	2,315,850	46,317,000
1-cent, bronze.....	1,066,920	164,360	447,400	1,489,880	148,988,000
Total minor.....	2,579,770	519,960	706,000	3,805,730	195,305,000
Total value.....	\$218,506,437	\$38,820,960	\$5,029,400	\$262,356,797	-----
Total pieces.....	177,249,000	34,769,000	40,757,400	-----	252,776,335
Prior fiscal year:	-----	-----	-----	-----	-----
Total value.....	\$38,079,142	\$61,673,887.50	2,900,100	\$102,653,129.50	-----
Total pieces.....	243,549,564	24,885,555	42,524,900	-----	310,960,019

Coinage for foreign governments was made only by the mint at Philadelphia during the fiscal year 1928, to an aggregate of 2,490,000 pieces, as follows: Ecuador, 1,120,000 one-sucre pieces and 320,000 two-sucre pieces, all of silver; Nicaragua, 200,000 twenty-five centavo pieces and 250,000 ten-centavo pieces, all of silver; 100,000 five-centavo nickel pieces and 500,000 one-centavo bronze pieces.

ISSUE OF FINE GOLD BARS FOR GOLD COIN AND GOLD BULLION

The value of the fine gold bars issued in exchange for gold coin and bullion monthly by the United States Mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the fiscal year 1928 was as follows:

EXCHANGE FOR GOLD COIN OR GOLD CERTIFICATES

Month	Philadelphia	San Francisco	Denver	New York	Total
1927

PURCHASE OF MINOR-COINAGE METAL FOR USE IN DOMESTIC COINAGE

During the fiscal year 1928 there were purchased at the mint at Philadelphia 13,898,011.45 troy ounces of minor-coinage metals at a cost of \$228,439.03, which includes 4,451,657.29 troy ounces in nickel blanks prepared for stamping, costing \$138,963.45.

There were also purchased during the same period at the mint at San Francisco 3,606,881.73 troy ounces of minor-coinage metals at a cost of \$39,595.76. The Denver Mint purchased 2,479,108.32 troy ounces of minor-coinage metals for use in coinage, costing \$26,209.27.

MINOR-COIN DISTRIBUTION COSTS

The minor-coinage distribution costs paid during the fiscal year 1928 from the profits on minor coinage amounted to \$52,447.61, as follows:

Transportation-----	\$48,745.56
Insurance-----	56.19
Containers-----	3,645.86
Total-----	52,447.61

MINOR COINS OUTSTANDING

The following statement shows the coinage of minor coins, by denominations, the amount on hand, issued, melted, and outstanding June 30, 1928. Minor coins were first manufactured at the Philadelphia Mint in 1793; at the San Francisco Mint in 1908; at the Denver Mint in 1911.

Denominations	Coined	On hand	Issued (net)	Melted	Amount issued and outstanding June 30, 1928
Philadelphia:					
Copper cents-----	\$1,562,887.44	-----	\$1,562,887.44	\$382,817.24	\$1,180,070.20
Copper half cents ¹ -----	37,926.11	-----	39,926.11	.43	34,925.68
Copper nickel cents-----	2,007,720.00	-----	2,007,720.00	808,162.24	1,199,557.76
Bronze 1-cent pieces-----	42,667,126.83	\$577,775.98	42,089,350.85	1,005,235.34	41,084,115.51
Bronze 2-cent pieces-----	912,020.00	-----	912,020.00	342,938.96	569,081.04
Nickel 3-cent pieces-----	941,349.48	-----	941,349.48	286,772.80	654,576.68
Nickel 5-cent pieces-----	64,694,673.10	1,144,023.15	63,550,649.95	6,114,179.90	57,436,470.05

PROOF BULLION (1,000 FINE)

In order to establish uniformity in assay of bullion in the offices of the mint service all proof gold and proof silver is made at the mint at Philadelphia and furnished to other offices when required.

The amount made during the fiscal year 1928 was: Gold, 343 ounces. No proof silver was made during the year.

OPERATIONS OF THE MELTING AND REFINING AND OF THE COINING DEPARTMENTS, FISCAL YEAR 1928

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1928, was 66 million fine ounces of gold and 31.5 million fine ounces of silver. There were also operated upon at the coinage mints 63.7 million ounces

of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative officers, as prescribed in section 3542, Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

REFINING OPERATIONS

The net product of electrolytically refined gold and silver of the mint service during the fiscal year 1928 was 5,549,525.12 fine ounces; other electrolytic output included the equivalent of the refined metals used for aiding the processes, 2,139,365.295 fine ounces; the product of melting operations (only) totaled 1,280,065.263 fine ounces, making the total output of the refineries 8,968,955.678 fine ounces. Details are shown in the following table:

¹ Net loss.

WASTAGE OF COINAGE METAL, AND LOSS ON SALE OF SWEEPS

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1928, was \$16,873.99. A loss of \$5,430.36 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the table following:

Item	Mint at—			Assay office at New York	Total
	Philadel- phia	San Francisco	Denver		
Gold wastage:					
Melting and refining department.....	\$14,469.33				\$14,469.33

Gold and silver departmental wastages offset by other departmental surpluses.....	2,671.25	700.72	236.05		3,608.02
Other wastage and loss on sweeps, from contingent appropriations.....	14,279.53	113.16	888.47	1,947.28	17,228.44
Total reimbursements.....	18,058.80	1,028.17	1,270.10	1,947.28	22,304.35

ENGRAVING DEPARTMENT

During the fiscal year ended June 30, 1928, the engraving department made 2,332 working dies for domestic coinage, including those for the Oregon Trail and discovery of Hawaii, memorial coinage. Master dies, hubs, and working dies were made for domestic, Philippine, Salvadorian, Ecuadorian, and Nicaraguan coinage; also for the Post Office, Interior, and War Departments.

LABORATORY, BUREAU OF THE MINT

From the domestic coinage of the calendar year 1927 the assayer of this bureau tested 358 gold coins and 518 silver coins, all of which were found within the legal requirements as to weight and fineness.

The greatest deviation in fineness of gold coins from standard (the limit of tolerance being 1 one-thousandth above or below 900) was 0.3 one-thousandth above and 0.7 one-thousandth below.

The greatest deviation in fineness of silver coins from standard (the limit of tolerance being 3 one-thousandths above or below 900) was 1.8 thousandths above and 1.6 thousandths below.

The following table summarizes results of fineness tests on domestic coin:

Fineness (thousandths)	Number of gold coins				Number of silver coins			
	Phila- delphia	San Francisco	Denver	Total	Phila- delphia	San Francisco	Denver	Total

ASSAY COMMISSION'S ANNUAL TEST OF COIN

Section 3547 of the Revised Statutes provides for an annual test of the domestic coinage executed during the calendar year 1927, by a commission, of whom part are ex officio members, the others being appointed, without compensation, by the President. The purpose is "to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight." The commission, which met at the Philadelphia Mint February 8 and 9, 1928, reported the following results of their examination:

Your committee on counting reports that the packages containing the pieces reserved by the several mints for the trial of coins were delivered to us by the superintendent of the mint at Philadelphia, and upon comparison of the transcripts kept by the director of the mint were found to be correct.

A liberal number of packages were selected from the deliveries of each month of all denominations coined, and the coins contained therein were counted and found to agree with the number called for in each package.

The reserved coins were then delivered to the committees on assaying and weighing. In the reports of those committees will be found an account of the disposition of these coins.

The committee on weighing report that they have taken at random from the several parcels of reserved coins of each mint such a number of pieces of each of the denominations represented and so distributed by dates of coinage as seemed to be sufficient for the purpose of weighing. These coins have been severally weighed by the committee and their respective weights ascertained to an accuracy of 0.01 grain, and the results recorded. The weights of these coins are given in the appended table. It will be noted that every coin weighed was within the deviation allowed by law.

The coins were directly weighed against a set of sealed coin weights, supplemented by two sets of grain weights, delivered to the commission from the Bureau of Standards, Washington, D. C., in sealed packages and accompanied by certificates signed by the director of the bureau. The weighings were made on a Troemner balance belonging to the Philadelphia Mint. Prior to the weighing of the coins this balance was tested by your committee as to equality of arms and sensibility and found to be in excellent condition and entirely satisfactory for the purpose of the committee.

Following the weighing of the coins your committee tested the working standard Troy pound weight of the Philadelphia Mint by which the other weights used in the mint are regulated. The standard with which this weight was compared was a sealed Troy pound weight (B. S. Troy pound 63) furnished by the Bureau of Standards for this purpose and accompanied by a certificate signed by the director of the bureau. The standard of the mint was found to be correct within the sensibility of the balance, about 0.04 grain (0.0001 Troy ounce). The accuracy of this weight is highly satisfactory. The summation of working standard weights of 10 ounces+2 ounces was also found to be very satisfactory.

The deviations from standard of the heaviest and lightest coins weighed, of each denomination from each mint, are shown in the following table:

Denomination	Legal deviation allowed	Philadelphia		San Francisco		Denver	
		Heavy	Light	Heavy	Light	Heavy	Light
GOLD COINS							
	<i>Grains</i>	<i>Grains</i>	<i>Grains</i>	<i>Grains</i>	<i>Grains</i>	<i>Grains</i>	<i>Grains</i>
Double eagle.....	0.5	0.25	0.29	0.29	0.33	0.17	0.31
Quarter eagle.....	.25	.19	.16				
SILVER COINS							
Dollar.....	1.5	.87	.84	.99	1.02	.95	1.19
Half dollar.....	1.5	.71	.56	1.02	1.15		
Quarter dollar.....	1.5	.94	.37	.20	.56	1.25	.52
Dime.....	1.5	.40	.55	.94	.44	1.45	.90

The committee on assaying, appointed by the chairman to examine coins selected from deliveries during the calendar year 1927 made by the mints at Philadelphia, San Francisco, and Denver, has completed the assays and it is our pleasure to report that all samples examined by us have been within the legal fineness as prescribed by law.

Your attention is invited to the report below, which shows that all three mass melts of gold coin from the mints assayed exactly 900.0 thousandths, which is standard fineness. The law provides for variations in the fineness of gold coins of one one-thousandth above or below standard, and on silver coin three one-thousandths above or below standard (900).

The following schedules show the variations found on coins assayed by the committee:

Assays of individual gold coins selected

Mint	Highest assay	Lowest assay
Philadelphia.....	<i>Fineness</i>	<i>Fineness</i>
San Francisco.....	900.3	899.7
Denver.....	900.1	899.4
	900.0	900.0

Assays of individual silver coins selected

Mint	Highest assay	Lowest assay
Philadelphia.....	<i>Fineness</i>	<i>Fineness</i>
San Francisco.....	900.7	897.3
Denver.....	900.2	898.9
	900.2	898.4

Assays of coins melted in mass

Mint	Gold coins	Silver coins
Philadelphia.....	<i>Fineness</i>	<i>Fineness</i>
San Francisco.....	900.0	899.0
Denver.....	900.0	899.0
	900.0	898.3

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1928, is respectfully submitted.

R. J. GRANT,
Director of the Mint.

Hon. ANDREW W. MELLON,
Secretary of the Treasury.

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1927

PART II

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1927

PART II

REPORT OF THE DIRECTOR OF THE MINT ON
THE PRODUCTION AND CONSUMPTION OF GOLD
AND SILVER IN THE UNITED STATES DURING
THE CALENDAR YEAR 1927

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER
IN THE UNITED STATES DURING THE CALENDAR YEAR 1927

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1927 is estimated to have been \$45,418,600, and the production of silver is estimated at 60,434,441 fine ounces. A comparison of these figures with those for 1926 indicates \$2,851,000 decrease in production of gold and approximately 2,284,000 ounces decrease in silver production.

As regards individual States, the only outstanding difference in gold production as compared with the prior year is Colorado's decrease of about \$1,800,000.

Individual States' material differences in silver production as compared with the prior year include decreases of approximately 1,000,000 ounces each in Arizona, Colorado, and Nevada, and an increase of over 1,300,000 ounces in Idaho.

A brief review of mining conditions, for which acknowledgments are made to the United States Bureau of Mines, follows; further information concerning same can be obtained by those interested by addressing the last-named bureau at Washington.

ALASKA

Alaska mines in 1927 produced gold valued at \$5,927,000, compared with an output of \$6,707,000 in 1926. The value of silver produced in Alaska in 1927 was \$356,000, or about \$74,500 less than in 1926.

In 1927 about 49.7 per cent of the total gold production came from lode mines, compared with 43.8 credited to lode mines in 1926, and 49.3 per cent in 1925.

The auriferous lode mines produced during the year gold valued at \$2,945,000 and silver valued at \$45,000. The copper ores contained \$297,800 in silver.

The value of the placer gold produced in Alaska in 1927 was \$2,982,000 compared with an output of \$3,769,000 in 1926. The

silver recovered from placer mining operations in 1927 was valued at \$13,200. It seems probable that the production of placer gold will be somewhat increased when several of the large mining enterprises now in course of development have completed their preparatory work.

Twenty-eight gold dredges were operated in Alaska in 1927, four less than in 1926. The dredges in 1927 handled about 6,084,000 cubic yards of gravel and produced gold valued at \$1,740,000. The production in 1926 was \$2,291,000, the decrease being largely due to an exceptionally dry season throughout much of the Territory. The total output of the dredges since this form of mining was introduced now amounts to \$33,891,000.

ARIZONA

Arizona produced gold in 1927 to a value of \$4,144,591, a decrease of \$692,845 from that of 1926, according to C. N. Gerry, of the United States Bureau of Mines. The larger part of the gold, or \$2,570,972 had its source in crude ore smelted. Gold in bullion from ore treated by amalgamation or cyanidation, which decreased, was valued at \$477,888; and gold in concentrate was valued at \$1,064,843. The gold from lode mines was derived from the following sources: Copper ore, \$3,304,265; dry or siliceous ore, \$628,799; lead ore, \$187,924; copper-lead-zinc ore, \$9,888; copper-lead ore, \$5,105; lead-zinc ore, \$2,138, and zinc ore, \$215. Gold from siliceous ore, chiefly from Mohave County, decreased about 40 per cent. Nearly 80 per cent of the State's gold came from copper ore, while placers produced only \$6,257 in gold. The largest producers of gold were the United Verde, Copper Queen, Calumet & Arizona, New Cornelia, and Katherine mines.

The silver output amounted to 6,847,680 ounces, a decrease of 533,347 ounces from the output of 1926. Silver from copper ore decreased, but that from siliceous ore increased slightly. The sources of the silver output were: Copper ore, 5,702,270 ounces; lead ore, 609,718 ounces; siliceous ore, 461,321 ounces; copper-lead ore, 38,824 ounces; copper-lead-zinc ore, 18,212 ounces; lead-zinc ore, 12,858 ounces; zinc ore, 4,434 ounces; and placers, 43 ounces. The largest silver producers were the United Verde, Calumet & Arizona, Copper Queen, and Magma mines.

There were 308 mines producing during the year, of which number only 15 were placer mines.

CALIFORNIA

The total mine production of gold in California in 1927, according to James M. Hill, of the United States Bureau of Mines, was \$11,671,018, of which 318 lode mines yielded \$5,833,705 and 465 placers \$5,837,313. As compared with 1926, the total gold production declined 2 per cent, that from lode mines declined 13 per cent, and that from placers increased 12 per cent.

Of the gold produced at lode mines (282,205.48 ounces) gold ore contributed 261,005.34 ounces; copper ore, 16,302.21 ounces; silver ore, 3,134.94 ounces; tailings, 1,035.24 ounces. The yield of gold from tailings was distributed as follows: Gold tailings, 773.15 ounces; silver tailings, 0.03 ounce; copper tailings, 254.59 ounces; lead tailings, 7.47 ounces.

Of the placer gold the dredges recovered \$5,461,929, or 94 per cent; drift mines, \$141,929, or 2 per cent; hydraulic mines, \$120,832, or 2 per cent; and surface mines, \$112,623, or 2 per cent. Yuba County had the largest gold yield, won mostly by dredges, followed by Nevada County, mostly from lodes; Amador County, mostly from lodes; and Sacramento County, mostly by dredges. Thirty-three companies produced more than 1,000 ounces of gold each and contributed 91 per cent of the total gold output of the State. Of the 33 larger companies 7 produced more than 20,000 ounces each and 2 more than 50,000 ounces; 11 of them operated 22 gold dredges, 2 drift placer mines, 1 a silver mine, 3 operated copper mines, and 16 operated gold lode mines.

The silver output of California in 1927 was 1,620,242 ounces, valued at \$918,677, a decrease of 20 per cent in quantity and 27 per cent in value as compared with 1926. The greatest yield in silver was from silver ore, which contributed 933,987 ounces; followed by copper ore, with 383,702 ounces. Gold ore yielded 96,905 ounces. The greatest output of silver came from the silver ores mined in San Bernardino County, followed by the output of silver from copper ores in Plumas County. Only 1 mine had an output of silver over 700,000 ounces, 2 between 100,000 and 300,000 ounces, 13 between 10,000 and 100,000 ounces, 27 between 1,000 and 10,000 ounces.

COLORADO

The reports from the mines of Colorado, according to Charles W. Henderson, Bureau of Mines, show for the calendar year 1927 that the lode and placer mines produced in recovered metal 255,377.33 fine ounces of gold, valued at \$5,279,118, and 3,784,605 fine ounces of silver, which, at \$0.567 per ounce, had a value of \$2,145,871. These figures, compared with similar tabulation for 1926, show a decrease for 1927 of \$1,798,915 in gold and a decrease of 919,517 ounces of silver. Lode gold production decreased \$1,846,395, but placer gold increased \$47,480.

The Cripple Creek district, Teller County, the principal gold-producing district in Colorado, yielded \$3,307,505 in gold in 1927, as compared with \$4,436,012 in 1926. Lake County (principally Leadville) yielded \$247,607 in 1927, as compared with \$469,678 in 1926. The combined gold production of Boulder, Clear Creek, and Gilpin Counties was \$179,817 in 1927 against \$245,266 in 1926. The combined production of Dolores, La Plata, Ouray, San Juan, and San Miguel Counties was \$1,234,430 in 1927, as compared with \$1,710,252 in 1926. The bonanza specimen gold of the Little Annie mine, Rio Grande County, yielded \$133,530 in 1927, as against \$105,799 in 1926. Summit County lode and placer mines yielded \$99,122 in 1927, as compared with \$43,016 in 1926. Park County produced \$39,719 in 1927 and \$37,273 in 1926.

For silver the combined production of Boulder, Clear Creek, and Gilpin Counties was 85,900 ounces in 1927 and 382,348 ounces in 1926. Lake County produced 411,471 ounces in 1927 and 714,585 in 1926. The combined production of Dolores, La Plata, Ouray, San Juan, and San Miguel Counties was 1,893,838 ounces in 1927 and 2,282,142 ounces in 1926. Pitkin County (Aspen) produced 152,328 ounces in

1927 and 242,290 ounces in 1926. Mineral County (Creede) produced 214,850 ounces in 1927 and 551,468 ounces in 1926. Saguache County (Bonanza) produced 845,044 ounces in 1927 and 289,505 ounces in 1926. Eagle County produced 85,741 ounces in 1927 as against 106,452 in 1926.

Dry gold and silver ores contributed 91.89 per cent of the gold, lead-zinc ores contributed 5.25 per cent, lead ores 0.98 per cent, copper and copper-lead ores combined 0.09 per cent, and placers 1.79 per cent.

Dry gold and silver ores contributed 63.67 per cent of the silver, lead-zinc ores 29.22 per cent, lead ore 6.47 per cent, copper and copper-lead ores combined 0.61 per cent, and placers 0.03 per cent.

Hydraulicking, sluicing, and one dredge in 1927 produced placer bullion containing \$94,434 in gold and 1,136 ounces of silver. Of this, the dredge produced \$86,902 in gold and 1,063 ounces of silver, and sluicing produced \$6,699 in gold and 60 ounces of silver. Placer production in 1926 was \$46,954 in gold and 569 ounces of silver.

CENTRAL STATES

The total mine production of silver in the Central States in 1927 was 332,642 ounces, valued at \$188,608, against 198,232 ounces in 1926. All the silver from Michigan was obtained from lode copper mines, mainly recovered in electrolytic refining. The output, 97,193 fine ounces, was 8,049 ounces less than in 1926. The output of silver from Missouri in 1927, 233,931 ounces, was derived partly from treatment of lead skimmings from lead ores mined in southeastern Missouri, a considerable quantity was obtained from copper matte, from lead smelters, but the largest proportion was recovered from zinc concentrates from the treatment of lead ores. The zinc concentrates shipped in 1927 contained between 18 and 20 ounces of silver per ton. Some of this silver had not reached the refineries in 1927, as it is necessary for the retort zinc smelters to ship their residues to a lead plant to recover the silver. The 1927 Missouri production of silver increased 143,931 ounces over 1926. From lead concentrates derived from southern Illinois fluorspar mines 1,518 fine ounces of silver was recovered, which was 1,472 ounces less than in 1926.

EASTERN OR APPALACHIAN STATES

The mine production of gold in the Eastern or Appalachian States increased from 694.23 fine ounces, valued at \$14,351, in 1926, to 825.96 fine ounces, valued at \$17,074, in 1927. Tennessee produced \$8,816, Pennsylvania \$6,201, Georgia \$1,042, and North Carolina \$1,015. The production from placer bullion was 99.51 ounces, all from small operations in Douglas and Lumpkin Counties, Ga., and Gaston and Nash Counties, N. C. No gold was obtained from siliceous ores in 1927. Tennessee copper ores from the Ducktown district yielded 426.47 ounces and pyritiferous magnetite ores in Pennsylvania 299.98 ounces.

The mine output of silver was 84,293 ounces, or 22,246 ounces less than in 1926. Of this 12 ounces was from placer bullion. No silver was obtained from siliceous ores in 1927. The copper ores of Tennessee yielded 81,460 ounces; 2,000 ounces was obtained from copper concentrates derived from pyritiferous magnetite ore in Pennsylvania; and copper ore from Vermont yielded 821 ounces.

IDAHO

In 1927, according to C. N. Gerry, of the United States Bureau of Mines, Idaho's output of gold was valued at \$316,603 and that of silver \$5,047,099. There was an increase of \$34,034 in the production of gold and 1,344,965 ounces in the production of silver over that of 1926.

Gold increased from \$282,569 in 1926 to \$316,603 in 1927, as a result of increases at the property of the Idawa, South Park, and Gold Dredging Cos. Placer property at Murray, formerly worked by dredge, was idle. Of this total the placer gold amounted to \$155,459 against \$172,826 in 1926; the gold won by dredges was valued at \$114,116, a decrease from \$141,160 in 1926, the dredge of the Yukon Gold Co. at Murray having made its last clean-up in June, 1926.

Dry or siliceous ore produced more gold than any other kind of ore, or \$99,706; gold in lead ore was valued at \$37,798; copper ore, \$16,421; lead-zinc ore, \$7,196; and copper-lead ore, \$23. In 1927 nearly 81 per cent of Idaho's gold came from placers and from siliceous ore.

The silver output was 8,901,409 ounces, an increase of 1,344,965 ounces. Most of the silver, or 5,609,605 ounces, came from lead ore. Lead-zinc ore supplied 2,136,708 ounces; copper-lead ore, 1,079,747 ounces; copper ore, 49,623 ounces; siliceous ore, 23,420 ounces; and placers, 2,306 ounces. The Coeur d'Alene region alone produced 8,256,126 ounces of silver. The largest producers of silver were the Morning, Hecla, Bunker Hill & Sullivan, and Sunshine mines.

There were 218 mines producing during the year, of which 70 were placer mines and 148 lode mines.

MONTANA

Montana's mine output of gold in 1927, according to C. N. Gerry, of the United States Bureau of Mines, was valued at \$1,106,796, a decrease of \$143,935. Of this total \$1,084,471 came from lode mines and \$22,325 from placers. There was a marked decrease in gold from lode mines, due chiefly to lessened output of the Jardine mine in Park County and the Anaconda properties at Butte. However, gold increased from the Liberty-Montana mine in Jefferson County and the Gould property near Helena. No dredges were operated and the placer output was less than that of 1926, which was small when compared with past years. The gold was derived principally from copper ore, which was the source of \$563,131. Gold from other sources was as follows: Siliceous ore, \$380,141; lead-zinc ore, \$77,854; lead ore, \$31,853; copper-lead ore, \$6,510; and zinc ore, \$24,982. Sixty-six per cent of the gold was produced by the Anaconda, Liberty-Montana, St. Louis, and New Gould Cos.

The output of silver decreased decidedly from 12,769,092 ounces in 1926 to 11,200,077 ounces in 1927, of which more than 86 per cent was recovered from the mines at Butte. Silver from siliceous ore and zinc ore increased considerably, but that from copper ore, lead ore, copper-lead ore, and lead-zinc ore was less than in 1926. Copper ore supplied the largest quantity of silver, 6,201,827 ounces; lead-zinc ore, 2,089,742 ounces; zinc ore, 1,607,188 ounces; copper-lead ore, 559,918 ounces; siliceous ore, 427,105 ounces; and lead ore,

314,100 ounces. More than 82 per cent of the silver was produced by the Anaconda, Butte & Superior, Elm Orlu, Silver Dyke, Poser, and Butte Copper & Zinc Cos.

There were 307 producing mines, of which 247 were lode mines and 60 were placer properties.

NEVADA

The gold output of Nevada in 1927, according to C. N. Gerry, of the United States Bureau of Mines, had a value of \$3,107,931, a decrease as compared with \$3,625,461 in 1926. The Robinson (Ely) district exceeded all other districts in the State in gold output. The production of gold from the Tonopah district was \$460,044, an increase over that of 1926, but the Comstock district produced only \$235,690 in gold, a marked decrease, as the Comstock Merger mill was closed late in 1926. The largest producers of gold were the Nevada Consolidated, Elkor, Consolidated Coppermines, White Caps, and Flowery properties, and the tailings dump at Goldfield operated by Bradshaw (Inc.). Most of the gold, \$1,958,777, came from siliceous ore. Copper ore supplied gold valued at \$969,178; lead ore, \$128,459; placers, \$37,400; copper-lead ore, \$8,618; and lead-zinc ore, \$6,499.

The production of silver was 5,397,179 ounces, a decrease from 6,518,983 ounces in 1926. The mines of the Tonopah district in Nye and Esmeralda Counties produced 2,167,694 ounces, an increase of 114,738 ounces as compared with the production for 1926. The production of silver from ore mined in the western part of the district in Esmeralda County increased 632,869 ounces. Comstock district, Storey County, decreased its output from 1,534,116 ounces to 62,051 ounces of silver. Most of the silver of the State, 3,419,940 ounces, had its source in siliceous ore, the greater part of which was treated by cyanidation. Silver from lead ore amounted to 1,405,418 ounces; copper-lead ore, 280,713 ounces; copper ore, 183,525 ounces; lead-zinc ore, 106,843 ounces; and placers, 740 ounces. The largest producers of silver were the Betty O'Neal, Tonopah Extension, Tonopah Mining, Consolidated Cortes, and Tonopah Belmont mines.

There were 409 mines producing in Nevada in 1927, of which 30 were placer mines and 379 were lode mines.

NEW MEXICO

According to Charles W. Henderson, United States Bureau of Mines, the recoverable gold in ores and gravels treated in New Mexico in 1927 was 29,241.87 fine ounces, valued at \$604,483, and recoverable silver was 890,083 fine ounces, valued at \$504,677, compared with 19,630.72 fine ounces of gold, valued at \$405,803, and 450,934 fine ounces of silver, valued at \$281,383, in 1926.

The entrance into the producing field in January, 1927, and the steady continuance of operation throughout the year of the American Metal Co.'s Pecos complex zinc-lead-copper-silver-gold mine and 600-ton selective flotation mill, in San Miguel County, alone the largest producer of each of the four metals, gold, silver, lead, and zinc in New Mexico, changed the complexion of New Mexico's gold and silver production very materially. Lead-zinc ores in New Mexico yielded 40.60 per cent of the gold, copper ores yielded 49.40 per cent, dry gold and silver ores yielded 8.6 per cent, and lead, copper-lead, and zinc

ores, negligible quantities; placers yielded nearly 1 per cent. Lead-zinc ores yielded 71.62 per cent of the silver, copper ore 13.7 per cent, dry gold and silver ores 6.95 per cent, lead ore 6.08 per cent, copper-lead ore 1.53 per cent, and zinc ore and placers negligible quantities.

The largest mine in New Mexico is the Chino of the Nevada Consolidated Copper Co., at Santa Rita, but this copper ore carries a very low content of gold and silver. The siliceous gold-silver-copper ore (called copper ore) of Lordsburg contributed most of the gold and silver credited to copper ores.

The Mogollon silver-gold district remained idle since closing in December, 1925, but silver ores were produced in Grant, Hidalgo, Sierra, and Socorro Counties. The Aztec gold mine, on Mount Baldy, was again in the producing list in 1927. Lead ores were contributed by Dona Ana, Grant, Hidalgo, Luna, Otero, Santa Fe, Sierra, and Socorro Counties. Copper-lead ores were from Grant and Lincoln Counties only.

The output of placer mines in 1927 was 280.97 ounces of gold and 32 ounces of silver.

OREGON

Oregon mines in 1927, according to James M. Hill, of the United States Bureau of Mines, produced \$303,383 in gold, of which placer mines yielded \$183,697 and lode mines \$119,686. The total production of gold increased 11 per cent, as compared with 1926, distributed among a loss of 21 per cent from lode mines and an increase of 50 per cent from placers. Lode mines yielded 39 per cent and placer mines 61 per cent of the total gold won in 1927. Dredges produced 61 per cent of the total placer gold saved in 1927 and increased their yield 52 per cent as compared with 1926. Grant County was the largest producer of gold in 1927, followed by Josephine and Baker Counties in order of rank. No gold was saved by cyanidation in Oregon in 1927.

The silver produced in Oregon in 1927 amounted to 45,830 ounces, valued at \$25,986, an increase of 54 per cent in quantity and 40 per cent in value. Lode mines produced 97 per cent of the total silver output; gold ore yielded 78 per cent and copper ore 18 per cent. No silver ore was produced in Oregon in 1927. Grant County was the largest producer of silver, followed by Baker County.

There were 186 producing properties in Oregon in 1927, of which 36 were lode mines and 150 placer mines.

SOUTH DAKOTA

The Homestake mine at Lead, Lawrence County, S. Dak., according to Charles W. Henderson, United States Bureau of Mines, in 1927 received in gross revenue \$6,679,802 from bullion bars produced at its amalgamation and cyanide mills from 1,371,583 tons milled, an average realization of \$4.87 per ton, as compared with a gross revenue of \$5,811,944 from 1,415,775 tons, an average realization of \$4.105 in 1926. The general manager's report of December 31, 1927, states that there are 754,295 tons of ore broken down and remaining in the stopes and there are 15,037,046 tons of ore blocked out and remaining in the mine. This mine from its beginning, 1875 to 1927, inclusive, has produced in gross receipts \$213,036,505.58 (not including wolframite) and paid \$52,343,164.29 in dividends.

In 1927, in the Keystone district, Custer County, the new 100-ton flotation mill for treating the lead-zinc ores of the Spokane-Cuyahoga mine was set in operation in November, 1927, and yielded lead-silver concentrate until January 3, 1928, when fire destroyed the power plant. The Columbia mine, in the Keystone district, Pennington County, was unwatered in 1927. The shaft was sunk from 200 feet in depth to 300 feet and a 100-ton amalgamation-cyanidation mill was under construction beginning August, 1927. A few ounces of placer gold were recovered by sluicing, near Tinton and Hill City.

The total recovered gold from South Dakota mines in 1927 was 322,031.74 fine ounces, valued at \$6,656,987 and the total silver was 96,171 fine ounces, valued at \$54,529.

TEXAS

According to Charles W. Henderson, of the United States Bureau of Mines, there were four producing mines in Texas in 1927, of which the Presidio mine, at Shafter, was the most important, with recovered content of slightly over 1,000,000 ounces of silver, nearly 500,000 pounds of lead, and nearly 400 ounces of gold. The other mines were the Hazel, near Van Horn, Culberson County; the Zinnery mine near Allamore, Hudspeth County; and the Tenabo Blanca mine, at Shafter.

The total recovered content from Texas mines in 1927 was 396.29 fine ounces of gold and 1,034,866 fine ounces of silver. The bulk of the metal production from Texas has been silver, mostly from the Presidio mine. The silver production of the State from 1885 to 1927, inclusive, has been 20,022,146 ounces, having a commercial value of \$14,484,403.

UTAH

The value of the metal output of Utah was \$73,626,632 in 1927, according to C. N. Gerry, of the United States Bureau of Mines. There was an increase in the production of lead, zinc, and gold, but a decrease in silver and copper as compared with the production of 1926.

The gold output was valued at \$4,008,451, an increase of \$230,405 from that of 1926. Separated as to source, copper ore was most important, containing gold valued at \$2,068,376; lead-zinc ore supplied \$1,038,885 in gold; siliceous ore, \$469,458; lead ore, \$410,722; and copper-lead ore, \$21,010. No gold was produced from placers in 1927 and no ore was treated by amalgamation or cyanidation. The four largest producers of gold were the Utah Copper, Park Utah Consolidated, United States Smelting, Refining & Mining, and the Utah Delaware Cos.

The silver production in Utah decreased from an output of 19,358,581 ounces in 1926 to 18,606,950 ounces in 1927. Separated as to source, the silver came principally from lead-zinc ore, which supplied 7,508,197 ounces; lead ore supplied 7,214,271 ounces; dry or siliceous ore, 2,577,357 ounces; copper ore, 1,138,014 ounces; and copper-lead ore, 169,111 ounces. The Tintic district, in Juab and Utah Counties, produced 7,591,406 ounces against 8,550,848 ounces in 1926. The Bingham district of Salt Lake County produced 3,582,084 ounces, a slight increase over 1926, and the Park City region, in Summit and Wasatch Counties, 6,935,267 ounces, against

6,620,817 ounces in 1926. The four largest producers of silver were the Park Utah Consolidated, Tintic Standard, Silver King Coalition, and Bingham Mines Cos.

There were 123 producing properties in 1927, all of which were lode mines.

WASHINGTON

The output of gold in Washington in 1927, according to C. N. Gerry, of the United States Bureau of Mines, had a value of \$403,380, an increase of \$210,288 from the production of 1926. Most of the gold of the State, or \$399,839, came from siliceous ore; copper ore supplied only \$2,873 in gold; lead ore, \$150; zinc ore, \$129; and placers, \$389. A large increase in gold was recorded from the Republic district and the Boundary Red Mountain mine was again an active producer. Crude ore supplied \$313,037 in gold, and concentrates, \$2,915. Since 1860 Washington has produced \$29,920,932 in gold.

The output of silver in 1927 was 155,850 ounces, a decrease of 15,799 ounces. Of the total silver, 115,684 ounces had its source in siliceous ore, 35,926 ounces in copper ore, 2,134 ounces in zinc ore, 1,939 ounces in lead ore, and 162 ounces in lead-zinc ore. Crude ore supplied most of the silver, or 135,684 ounces; concentrates, 19,939 ounces; and placers, 5 ounces.

There were 3 placers and 30 lode producing mines.

WYOMING

According to Charles W. Henderson, United States Bureau of Mines, there was only one producing gold and silver mine in Wyoming in 1927, the Hidden Hand, at Atlantic City, Fremont County. Production was in the form of amalgam bullion.

Refinery production of gold mined in the several States and Territories in 1926 and 1927, with the increase and decrease in each for the latter year

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1927

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the United States assay office at New York and the mint at Philadelphia hold the foremost places; consequently the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1927, with the classes of material from which they were made.

Gold and silver issued for use in the industrial arts during the year ended December 31, 1927

Material	Issued by—	Gold	Silver
		<i>Dollars</i>	<i>Fine ounces</i>
Bullion.....	Mints and assay offices.....	51,551,813	955,751

LOSSES AND GAINS ON WITHDRAWN COIN

The loss on face value of gold coin totaling \$2,236,109.50 withdrawn from circulation during the fiscal year 1928 was \$19,897.73, of which \$2,997.57 was reimbursable from the appropriation provided for that purpose. The loss on face value of silver coin totaling \$4,224,509.91 withdrawn from circulation was \$328,388.36, all being reimbursable from the appropriation provided. The reimbursable loss, provided for by appropriation, on minor coin totaling \$404,236.37 withdrawn during the fiscal year was \$22,029.01.

Standard silver dollars (mutilated) purchased as bullion for use in the manufacture of subsidiary silver coin, since 1883

¹ 20-cent silver coinage, 1875, \$265,598; 1876, \$5,180; 1877, \$102; 1878, \$120; total, \$271,000.

² Includes \$475,000 in Columbian coins.

³ Includes \$2,026,052.50 in Columbian coins.

⁴ Includes \$10,005.75 in Columbian coins.

⁵ Includes \$50,026 in Lafayette souvenir coins.

⁶ Includes \$30,015 in Panama Pacific International Exposition coins.

⁷ Includes \$50,029 Illinois Centennial coins.

⁸ Includes \$25,014 Maine Centennial and \$100,056 Landing of Pilgrims coins.

⁹ Includes \$1,006,473 "Peace" coins.

¹⁰ Includes \$50,026.50 Landing of Pilgrims, \$25,014 Missouri Centennial, and \$35,022 Alabama Centennial coins.

¹¹ Grant Memorial coins.

¹² Includes \$137,038.50 Monroe Doctrine commemorative coins.

¹³ Huguenot-Walloon commemorative coins.

¹⁴ Stone Mountain, \$1,157,354.50; Lexington-Concord, \$81,049.50; California Jubilee, \$75,100; Vancouver, \$25,014.

¹⁵ National Sesquicentennial of signing Declaration of Independence, \$500,264; Oregon Trail, \$74,042.50.

¹⁶ Includes commemorative coins Battle of Bennington, Vt., \$20,017.

¹⁷ NOTE.—The silver dollar coins executed subsequent to 1920 represent an equivalent number of dollars converted to bullion under the act of Apr. 23, 1918—259,121,554 for export to India and 11,111,168 for domestic subsidiary coin.

REPORT OF THE DIRECTOR OF THE MINT

Income and expenses of the United States mints and assay offices,

Items	Mints		
	Philadel- phia	San Francisco	Denver
INCOME			
Revenues:			
Melting charges.....	\$8,447.80	\$8,137.40	\$3,290.50
Parting and refining charges.....		50,724.36	40,224.00
Alloy charges.....	244.63	2,673.54	830.84
Fine and imported bar charges.....	441.47	3,959.36	91.76
Proceeds of medals sold.....	5,797.03		
Receipts for special assays of bullion and ores.....	103.00	57.00	29.00
Value of bullion recovered incident to receipt of deposits.....	871.96	1,799.60	2,246.02
Value of bullion recovered from refining and coining operations.....		12,107.84	3,656.17
Gain on lightweight and mutilated coins purchased for recoining.....	286.59	49.12	18.47
Gain on bullion shipments to Government refineries.....			
Receipts from sale of by-products (platinum, etc.).....		890.67	710.75
Receipts from sale of old material.....			
Seignorage on silver dollar coinage.....	543.49		
Seignorage on subsidiary silver coinage.....	81,626.61	375,640.62	
Seignorage on minor coinage (nickel).....	1,693,223.32	429,923.03	170,321.75
Seignorage on minor coinage (bronze).....	1,191,118.70	304,187.34	393,076.87
Commission on telephone calls.....	921,974.34	144,773.17	229,226.40
	46.60		11.32
Total revenue.....	3,904,725.54	1,334,923.05	843,733.85
Approximate reimbursements:			
Charges for manufacture of foreign coin.....			
Charges for manufacture of special medals.....	14,876.20		
Charges for work and supplies for other institutions.....	4,788.00		
	17,626.57		
Total reimbursements.....	37,290.77		
Total income.....	3,942,016.31	1,334,923.05	843,733.85
EXPENSES			
Payable from appropriations:			
Salaries and wages.....			
Contingent expenses (including equipment) less amounts to reimburse operative wastage and loss on operative sweeps sold.....	594,663.47	237,684.55	154,577.80
	80,580.81	48,509.06	36,681.51
Wastage of operative departments, gold and silver.....	11,798.08		
Loss on operative sweeps sold.....	2,481.45	113.16	888.47
Transportation of bullion and coin between mints and assay offices.....	20,112.25	74.07	14.36
	709,636.06	286,380.84	192,162.14
Payable from revenue:			
Expense of distributing minor coin.....			
Wastage of operative departments, minor metals.....	36,763.36	4,034.66	12,791.68
	1,108.02	214.29	145.58
Total payable from revenue.....	37,871.38	4,248.95	12,937.26
Total expenses.....	747,507.44	290,629.79	205,099.40

STOCK OF MONEY IN THE UNITED STATES ON JUNE 30, 1928

On June 30, 1928, the stock of domestic coin in the United States was \$2,284,650,422, as shown in the table below. Beginning with the fiscal year 1927-28, the statement of stock of domestic coin in the United States has been amplified to give effect to "earmark" transactions in gold coin and to include minor coin (nickels and cents). The earmarked gold taken into consideration is that held by Federal reserve banks in trust for foreign account, and that held abroad in trust for Federal reserve bank account. While the value of the minor coin has always been comparatively small when considered with the silver and gold coin, the total estimated stock of \$113,294,692 minor coin at the end of June, 1927, grew rapidly from about \$69,000,000 during the 10 years after the United States entered the World War, an increase of about 64 per cent.

The stated amount represents only the 5-cent nickel coins and 1-cent bronze coins of metallic composition conforming with the laws now effective, and is the difference between the values coined and those melted when no longer fit for circulation. Although these coins are known to circulate to a small degree in near-by countries, no record is made of imports and exports; and the minor coins are probably not used in industry because commercial metals would be much less costly for such use. No deduction has been made for the probably large amounts that have been lost. The old copper cents and half cents, the copper-nickel cents, the bronze 2-cents, and nickel-copper 3-cents are not included since they are seen so seldom as to make certain they are practically all out of circulation.

Stock of domestic coin in the United States, June 30, 1928

Item	Gold	Silver	Minor	Total
Estimated stock of coin in United States June 30, 1927				
Coinage executed during fiscal year 1928	\$1,303,369,861	\$833,534,305	\$113,294,692	\$2,250,198,858

¹ Revised by eliminating \$1,100,000 held by Federal reserve banks in trust, under earmark for foreign account.

NOTE.—The number of standard silver dollars coined to June 30, 1928, was 840,505,332, which added to the Hawaiian dollar coinage, 500,000 plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 841,652,191. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000, the net export from November, 1919, to July, 1920, in movement due to the high price of silver, was 28,287,142, those melted under the terms of the Pittman Act of Apr. 23, 1918, totaled 270,232,722, those melted otherwise (mutilated, etc.) since 1883 numbered 220,297, and the number of Hawaiian dollars melted to June 30, 1928, was 455,329, a total disposition of 301,690,490, leaving in the United States on June 30, 1928, 539,961,701 standard silver dollars and 299,010,231 dollars in subsidiary silver coin.

¹ Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agency of the Federal Reserve Bank of Atlanta.

² Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.

³ Population of continental United States (estimated) June 30, 1928, 118,364,000; June 30, 1927, 116,943,000; Oct. 31, 1920, 107,491,000; June 30, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

⁴ Does not include gold bullion or foreign coin other than that held by the Treasury, Federal reserve banks, and Federal reserve agents. Gold held by Federal reserve banks under earmark for foreign account is excluded, and gold held abroad for Federal reserve banks is included.

⁵ These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

⁶ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

⁷ This total includes \$20,404,511 of notes in process of redemption, \$149,700,062 of gold deposited for redemption of Federal reserve notes, \$5,362,953 deposited for redemption of National bank notes, \$2,430 deposited for retirement of additional circulation (act of May 30, 1908), and \$6,444,671 deposited as a reserve against postal savings deposits.

⁸ Revised figures.

NOTE.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$156,039,088 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury. Federal reserve agents are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or gold and such discounted or purchased paper as is eligible under the terms of the Federal reserve act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful money has been deposited with the Treasurer of the United States for retirement of all outstanding Federal reserve bank notes. National bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national bank notes secured by Government bonds.

CASH HOLDINGS OF NATIONAL BANKS

Reports to the Comptroller of the Currency of cash holdings on June 30, 1928, of the national banks (7,691) give:

Gold coin	\$16,637,000
Standard silver dollars	5,798,000
Subsidiary silver and minor coin	28,291,000
Gold certificates	39,766,000
Silver certificates	25,013,000
United States notes	21,730,000
National-bank notes	58,181,000
Federal reserve and Federal reserve bank notes	119,643,000
Clearing-house certificates	54,000
Total	315,113,000

CASH HOLDING OF NONNATIONAL BANKS

Reports to the Comptroller of the Currency of 19,265 reporting banks, other than national banks, as of June 30, 1927, show cash holdings as follows:

Gold coin	\$18,068,000
Silver coin	23,728,000
Paper currency	262,200,000
Nickels and cents	1,926,000
Not classified	337,770,000
Total	643,692,000

STOCK OF MONEY IN THE UNITED STATES DECEMBER 31, 1927

On December 31, 1927, the stock of domestic coin in the United States was \$2,189,869,937, as shown in the table below.

Item	Gold	Silver	Minor	Total
Estimated stock of coin in United States Dec. 31, 1926	\$1,204,010,302	\$830,499,553	\$111,238,450	\$2,145,748,305
Coinage executed calendar year 1927	125,645,000	11,286,217	4,215,910	141,147,127
Imports United States coin, calendar year 1927	71,001,720	902,909		71,904,629
Total	1,400,657,022	842,688,679	115,454,360	2,358,800,061
Less:				
Exports United States coin, calendar year 1927	146,302,604	396,482		146,699,086
Under earmark for foreign account, (held in trust by Federal reserve banks on Dec. 31, 1927)	12,600,000			12,600,000
United States coin withdrawn from monetary use, calendar year 1927, face value	2,340,721	3,486,532	203,785	6,031,038
United States coin used in the industrial arts, estimated, calendar year 1927	3,500,000	100,000		3,600,000
Total	164,743,325	3,983,014	203,785	168,930,124
Estimated stock of coin in United States Dec. 31, 1927	1,235,913,697	838,705,665	115,250,575	2,189,869,937

NOTE.—The number of standard silver dollars coined to Dec. 31, 1927, was 838,512,683, which added to the Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and of standard silver dollars exported in transports, 496,859, equals 839,659,542. Since July 1, 1898, the number to July, 1920, in the movement due to the high price of silver, was 2,495,000, the net export from November, 1919, terms of the Pittman Act of Apr. 23, 1918, was 270,232,722, the number otherwise melted (mutilated, etc.) since 1883 was 219,191, and the number of Hawaiian dollars melted to Dec. 31, 1927, was 455,329, a total and 300,735,507 dollars in subsidiary silver coin.

¹ Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agency of the Federal Reserve Bank of Atlanta.

² Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.

³ Population of continental United States (estimated) Dec. 31, 1927, 117,653,000; Dec. 31, 1926, 116,232,000; Oct. 31, 1920, 107,491,000; June 30, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

⁴ Does not include gold bullion or foreign coin other than that held by the Treasury. Federal reserve banks, and Federal reserve agents. Gold held by Federal reserve banks under earmark for foreign account is excluded, and gold held abroad for Federal reserve banks is included.

⁵ These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

⁶ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

⁷ This total includes \$23,184,938 of notes in process of redemption, \$156,320,697 of gold deposited for redemption of Federal reserve notes, \$5,934,926 deposited for redemption of national-bank notes, \$2,630 deposited for retirement of additional circulation (act of May 30, 1908), and \$6,435,700 deposited as reserve against postal-savings deposits.

⁸ Revised figures.

Note.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$155,420,721 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible under the terms of the Federal reserve act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful money has been deposited with the Treasurer of the United States for retirement of all outstanding Federal reserve bank notes. National bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national-bank notes secured by Government bonds.

NOTE.—The quantities in the column "Net imports" for both gold and silver for the years 1873-74 to 1886-87 are estimated only, deducted from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

THE COURSE OF GOLD AND SILVER

The following review of the London market during the calendar year 1927 is from the annual circular issued by Messrs. Sharps & Wilkins, bullion brokers, of London, England:

GOLD

Owing to the gradual return to more normal monetary conditions in this country, the past year presents fewer points of interest when compared with other postwar years. The fluctuations in the price of the metal have been limited to the basis of the Bank of England buying and selling rates, the highest and lowest quotations being 84s. 11½d. and 84s. 10d. per ounce fine, respectively, and the practice of quoting in the London bullion market per ounce fine has continued.

In reviewing the position of the market, the various movements of gold which directly affect the reserves of the Bank of England are of primary interest. At the end of 1926 the returns showed that these reserves had been depleted to the extent of £5,324,000 since the return to a gold standard in 1925. After a slight decrease in the net efflux which occurred in January, the reserves were again drawn upon and by the end of February the figure became increased to approximately £6,600,000. Important shipments were made at this time to Russia, Germany, and America. In addition, exports of sovereigns took place to Spain. The regulations in that country insisted that all customs duties must be paid on a gold basis, and in view of the improvement in the exchange, importers into Spain found it more profitable to settle their commitments by shipping sovereigns from London than by paying in paper pesetas.

From this point the returns showed a gradual improvement, and with considerably less withdrawals on continental account the net efflux became reduced to approximately £3,000,000 by the end of April. This improvement, however, was not maintained, and by the end of the half year the depreciation in the reserves reached the figure of about £6,600,000. A shipment of approximately £4,250,000 to New York in May as well as the purchase of £2,500,000 for an "unknown destination," which was later officially stated to be the Bank of France, were the two important movements of gold during this period.

In addition to the amounts acquired and held in London by the Bank of France, it was understood that important purchases had also been effected in New York and also that the shipment of gold from London to America already referred to was probably in some way connected with these transactions.

It is usually expected that the gold reserves in this country should be strengthened during the first half of the year in order to make provision against the customary drain of the metal which usually takes place in the autumn, but instead the reserves actually showed a reduction by the end of June of £1,269,000, principally due to the continued purchases on continental account, and grave fears were expressed in the money market as to what the effect would be later in the year.

The period July to September showed no improvement in the position, the net efflux being further increased by approximately £650,000. Heavy shipments of sovereigns to the Argentine and Brazil to a total amount of £9,816,000 were made at this time, of which £1,425,000 was shipped from London and the balance from South Africa, which seriously affected the exports of gold from this quarter.

After a slight improvement which took place during October and early November, large withdrawals of gold for an "unknown destination," which later transpired to be on Polish account, further depleted the reserves, and by the end of November the net efflux stood at approximately £7,800,000.

During December, shipments of about £1,750,000 were made from New York to London, induced by the rise in the sterling rate and in the absence of any important outside demand, the greater part was secured by the Bank of England and eased the position considerably; the net efflux at the end of 1927 amounting to £6,539,000, representing a loss on the entire year of £1,215,000.

About £25,800,000 gold bullion was received from South and West Africa during the year for disposal in the open market, and of this only approximately £6,250,000 has been secured by the Bank of England.

The introduction of an "unknown buyer" into the gold market on several occasions during the past year has caused a good deal of speculation from time to time as to the exact destination for which the purchases were made. It was generally believed that the purchases of £2,000,000 effected under the above

heading during the early part of the year were for account of the Indian Government, later purchases for Belgium, France, Austria, and Hungary, and in the autumn for Poland.

The reduction in the consumption of gold by India which took place in 1926 has continued during the year under review, but, as will be seen from the details given below, the shipments from South Africa have been chiefly affected.

During the year considerable amounts of sovereigns were constantly being reported as having been set aside or released on account of the South African Reserve Bank.

* * * * *

SILVER

The silver market during the year has been principally influenced by the following three factors: (1) The situation in China; (2) the sale of silver by the Indian Government, which, although merely exercising its influence as a possibility during the first seven months of the year, became an actuality at the end of July; and (3) the financial crisis in Japan which caused wide fluctuations in the yen rate and prompted heavy speculation in Shanghai.

Prices have varied between $24\frac{3}{4}$ d. per ounce standard and 28d. per ounce standard, the quotations on the 5th of January and the 3d of February, respectively, which represents a range of $3\frac{1}{4}$ d. per ounce standard, and which is not excessive when compared with recent years.

At the end of 1926 the quotations were 25d. per ounce standard for cash and $24\frac{7}{8}$ d. per ounce standard for forward delivery. After a slight reaction to $24\frac{3}{4}$ d. per ounce standard on weaker advices from China, the market developed a firmer tendency with the price improving, at first gradually but later more sharply until $27\frac{1}{8}$ d. per ounce standard was quoted on January 29. The market at the time was entirely dominated by the chaotic financial situation in China which became intensified by the customary adjustment of outstanding commitments on the approach of the China New Year disclosing a short position, which necessitated the purchase of silver. The general firmness of the market and the improvement in price together with the uncertainty as to the future outlook produced a feeling of nervousness, inducing the bears to cover up the very large oversold position which was then in existence in London. This demand was largely responsible for the somewhat exaggerated rise and the wild fluctuations in price which occurred. Although China became eliminated as a dealer during the New Year holidays, a further stimulus was given to the market by the transfer of 3,600 bars of silver from Bombay to China, bringing large buying orders to London for immediate shipment to India in order to replace the depleted stocks, with the result that the quotation of 28d. per ounce standard was reached on February 3. This proved to be the highest point of the year and with China resuming operations after the holidays as a heavy seller, the market developed a weak tendency, the price falling $1\frac{5}{8}$ d. between February 4 and 9, $\frac{3}{4}$ d. of which took place on the latter day. The India bazaars were also inclined to make fresh forward sales and American producers appeared anxious to secure the comparatively high rates ruling. On continued China selling and with only a moderate demand a further setback took place and $26\frac{3}{8}$ d. per ounce standard was quoted on February 12. The Indian oversold position had by now become very much reduced, but speculative transactions on the part of China continued active, maintaining the market in a nervous state to the accompaniment of rather wild fluctuations in price.

In the early part of March the news that the amendment to the bill advocating a 1s. 4d. rupee had been defeated, thereby assuring that the rate would be fixed on the basis of 1s. 6d., produced fresh weakness in the market and $25\frac{3}{8}$ d. per ounce standard was reached on March 14. This lower level developed a steadier tone and with an improved demand from India chiefly to cover up outstanding sales, the price recovered again to slightly over 26d. per ounce standard, remaining at approximately this level throughout April, May, June, and July. The financial and political crises which took place in Japan during April produced a general feeling of nervousness in the market and served to restrict business during this period. Operations on the part of China were largely influenced by the heavy speculation in the yen rate, which was being used as the chief gambling counter in Shanghai. Large orders were received from that quarter one day to buy and the next to sell, with the result that it was extremely difficult to form any satisfactory opinion of the market, each day having to be treated entirely on its own. Only a moderate demand was received from the Indian bazaars, the regular shipments from New York direct being sufficient to satisfy the greater part of their

requirements, at the same time there was a disposition to make speculative forward sales whenever any improvement occurred, prompted no doubt by the ever-present fear that sales of silver might be made by the Indian Government. American producers were not keen sellers in London, the shipments to India and China being sufficient to absorb the surplus of production, but some important sales were made on Far Eastern account.

At the end of July a large amount of silver was sold in Bombay for delivery at the August and September settlements and for forward delivery in London. The exact nature of this selling was not at first realized, but it was later officially announced by the Indian Government that silver bullion held in the currency reserve to an amount of approximately 9,200,000 ounces fine, representing the entire stock of fine silver, had been disposed of. Owing to a strong demand from both India and China no difficulty was experienced in selling this silver without adversely affecting the price. As soon as this information was published there was a rush of bear selling by the Indian bazaars, prompted by the fear that once a start had actually been made further sales would follow, although the mere fact that the announcement was made would rather lead one to the contrary conclusion, at any rate so far as the immediate future was concerned. It must be realized that the possibility of sales of silver by the Indian Government had weighed rather heavily upon the market for some considerable time and it is not to be wondered at that when the possibility became an accomplished fact, an extremely unsettled and pessimistic feeling should at first be produced in the market, especially as there had been a growing tendency in the Indian bazaars to believe that the original recommendations of the Currency Commission with regard to the disposal of the surplus silver might not be undertaken after all in quite so drastic a manner as at first seemed possible. After more mature consideration had been given to the position, a rather better feeling gradually gained ground and there was not only less disposition to continue making speculative sales, but there was a distinct tendency to cover up those sales which had recently been made. During the remainder of the month the price remained steady at slightly over 25d. per ounce standard with the market in rather a subdued state.

September witnessed a feeling of more confidence in the market generally. The decision to postpone the Indian reserve bank bill for further discussion stimulated the covering on the part of the bears and with China a buyer and sellers less disposed to meet the market at the reduced level in price, a gradual improvement took place to 25¾d. per ounce standard, remaining at about this level throughout the following month. During this period there was a distinct improvement in the Indian demand for shipment, which had practically ceased during the previous two months owing to the sales by the Indian Government having supplied the necessary requirements, but most of the purchases were offset by forward sales and consequently produced little effect upon the price of silver. China was also an active dealer both ways, but operations from this quarter were chiefly influenced by the speculation in yen which continued to dominate the market here throughout the remainder of the year.

During November and the early part of December a fresh upward movement occurred, until 27d. per ounce standard was reached on the 6th of December. The transfer of 5,000 bars of silver from Bombay to China caused a temporary shortage of supplies in India and was chiefly responsible for the keen demand which was received from that quarter, although the orders were chiefly for January shipment dates. There was also a tendency to close up the speculative sales recently made. During the latter part of the month the price ceased slightly, the quotations at the end of the year standing at 26½d. to 26⅞d. per ounce standard for cash and forward deliveries, respectively. With the approach of the holidays business slackened off considerably and China became more of a seller.

With the average price of silver for the year standing at just over 26d. per ounce standard compared with 25d. per ounce standard ruling at the end of 1926, the resistance shown by the market to the weight of production intensified by sales of silver by the Indian Government and on continental account has proved truly remarkable, which seems to show that at about this level the consumption is well able to absorb the actual world's production of the metal. Although the unsettled conditions which have existed in China throughout the year have tended to disorganize trade, the stocks of silver in Shanghai on December 31, 1927, show a reduction when compared with the position at the end of the previous year, in spite of heavy shipments from America and the transfer of silver from Bombay. This may perhaps be taken as an indication

of the enormous consuming capacity of China, given anything like normal economic conditions.

The demand for silver for home and continental trade account has continued good throughout the year. Important amounts of silver have also been used for the manufacture at the Vienna Mint of Maria Theresa dollars, there being a steady demand for this form of currency in Abyssinia, Arabia, and the Persian Gulf. In addition to the consignments of silver from London for this purpose, about 10,000,000 fine ounces have been shipped direct from Mexico.

Sales of silver by the Bank of France have continued to be made and in addition to moderate shipments to London, approximately 6,000,000 ounces fine have been forwarded from Marseille to Bombay.

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, and since from daily London quotations.

RATIO OF SILVER TO GOLD, AS AFFECTED BY WORLD WAR

During the period December, 1916, to June, 1920, it is probable that the world's basic silver price was that of New York rather than that of London. The normal relationship between the two prices—New York a fraction of a cent below the London quotation with exchange considered—did not prevail during this period, when the average monthly New York price varied between approximately 3 cents above and 6 cents below the London price. This period appears to have been initiated by enormous coinages to meet war-time needs, and large silver shipments from the United States to the Orient. Its close was coincident with the removal of the product of United States mines from the world market, purchases under the Pittman Act of April 23, 1918, having begun in June, 1920.

The ratio of silver to gold, based on the New York price, was for this period: Calendar year 1917, 24.85; 1918, 21; 1919, 18.44; 1920, 20.27.

With the partial release during the first half of 1919 of British governmental control of gold export, the London price of exportable gold advanced above its monetary par. The ratio of silver to this

gold, based on the average London price of both metals, follows: 1919, 17.53; 1920, 20.41; 1921, 32.34; 1922, 30.11; 1923, 31.35; 1924, 30.62.

Final release of British governmental control of gold export became effective April 28, 1925, when the Chancellor of the Exchequer of Great Britain announced that the restrictions authorized by the gold and silver (export control) act of 1920 on export of gold would be discontinued from that date. This had the effect of restoring the gold standard to the United Kingdom. The example of Great Britain was followed by Australia, New Zealand, Netherlands, and the Dutch East Indies, and on June 1 by South Africa. On April 29, 1925, the London quotation on gold dropped more than 1 shilling to 84s. 11d. per fine ounce, as compared with 84s. 11.45d., mint par. Thereafter the quotation fluctuated between 84s. 10½d. and 84s. 11½d. until January 29, 1926, when it touched 84s. 9¾d.; it has since varied between the latter figure and 84s. 11½d.

Bullion value of the silver dollar [371¼ grains of pure silver] at the annual average price of silver each calendar year since 1837

VALUES OF FOREIGN COINS, OCTOBER 1, 1928

In pursuance of the provisions of section 25 of the act of August 27, 1894, as amended by section 403, Title IV, of the act of May 27, 1921, and reenacted by section 522, Title IV, act of September 21, 1922, I hereby proclaim the following estimate by the Director of the Mint of the values of pure metal contents of foreign coins to be the values of such coins in terms of the money of account of the United States, to be followed in estimating the value of all foreign merchandise exported to the United States during the quarter beginning October 1, 1928, expressed in any such metallic currencies: *Provided, however,* That if no such value has been proclaimed, or if the value so proclaimed varies by 5 per cent or more from a value measured by the buying rate in the New York market at noon on the day of exportation, conversion shall be made at a value measured by such buying rate, as determined by the Federal Reserve Bank of New York and published by me as certified by said bank pursuant to the provisions of said section 25 as amended.

ANDREW W. MELLON,
Secretary of the Treasury.

MONETARY LEGISLATION

[PUBLIC—No. 98—70TH CONGRESS]

[H. R. 81]

An Act To authorize the coinage of silver 50-cent pieces in commemoration of the one hundred and fiftieth anniversary of the discovery of the Hawaiian Islands by Captain James Cook, and for the purpose of aiding in establishing a Captain James Cook memorial collection in the archives of the Territory of Hawaii.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in commemoration of the one hundred and fiftieth anniversary of the discovery of the Hawaiian Islands by Captain James Cook, and for the purpose of aiding in establishing a Captain James Cook memorial collection in the archives of the Territory of Hawaii, there shall be coined in the mints of the United States silver 50-cent pieces to the number of ten thousand, such 50-cent pieces to be of a standard troy weight, composition, diameter, and design as shall be fixed by the director of the mint and approved by the Secretary of the Treasury, which said 50-cent pieces shall be legal tender in any payment of their face value.

SEC. 2. The coins herein authorized shall be issued only upon the request of the Cook Sesquicentennial Commission of Hawaii and in such numbers and at such times as they shall request upon payment by such commission to the United States of the par value of such coins.

SEC. 3. All laws now in force relating to the subsidiary silver coins of the United States and the coining or striking of the same, regulating and guarding the process of coinage, providing for the purchase of material, and for the transportation, distribution, and redemption of the coins, for the prevention of debasement or counterfeiting, for security of the coin or for any other purpose, whether said laws are penal or otherwise, shall, so far as applicable, apply to the coinage herein authorized: *Provided*, That the United States shall not be subject to the expense of making the necessary dies and other preparation of this coinage.

Approved, March 7, 1928.

FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production, import, export, and coinage of gold and silver, and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of interrogatories covering the points on which information is sought is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies, in the form of reports, are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission and the available data for the calendar year under review are usually incomplete.

In the absence of official returns from foreign countries the most reliable data available are used in compiling world statistics. Where data other than from the interrogatory replies are published the source of the information is stated. Conversions of foreign moneys or values into United States equivalents have been made at the legal par rates unless otherwise stated (in the text).

Revised world tables for 1926 and tables for 1927, subject to revision, are printed at the end of this volume. Detailed data, arranged by continents and countries, follow herewith; they form the basis of the tables.

NORTH AMERICA

CANADA

The domestic silver coinage executed in home mints during the year ended December 31, 1927, consisted of 468,096 25-cent pieces, having a face value of \$117,024.

The amount of domestic silver coin withdrawn from monetary use for recoinage during 1927 was \$902,929.

The estimated quantity of gold and silver used in the industrial arts during 1927 was as follows: Gold, \$1,193,692; silver, \$394,737.

The amount of gold and silver, in the form of old plate, jewelry, etc., returned from the industrial arts to monetary use during 1927 was as follows: Gold, 14,873 fine ounces, valued at \$307,452; silver, 4,931 fine ounces, valued at \$2,752.

The total import of United States gold coin during 1927 was \$30,510,638.

ALBANIAN CURRENCY

[From report of the United States Legation at Tirana, Albania]

Until within the last two years Albania has had no money bearing its own stamp, there being in circulation the gold coins of France and Austria—the 20-franc piece known as the napoleon, and the Turkish sovereign of 20 and 22 francs, respectively. The silver coins of Austria, Yugoslavia, and other Balkan countries and the paper lire notes of Italy have constituted the country's "small change."

After the creation of the National Bank of Albania something more than two years ago, financed by an Italian group, money bearing the Albanian stamp began to be issued but such minting and printing as has been done to date has failed to supplant only in small degree the old coins of other countries heretofore mentioned, except in the case of the 20-franc napoleon. Paper napoleons are now seen more frequently here in the capital than the gold coins of the same denomination, but outside Tirana the shopkeepers and populace have been slow to embrace the new medium of exchange in spite of a strong move by the National Bank to drive the old gold coins out of circulation by refusing longer to accept them.

The National bank has not been entirely successful in putting the new money into circulation, two metal coins and one paper note having been recalled from circulation by the Government because of Italian propaganda carried thereon.

CURRENCY

[From *Moniteur des Intérêts Matériels*, Brussels, March 23-24, 1928]

The minister of finance notified the public that, since the international convention of November 6, 1885, has ceased to exist, the nondemonetized national metallic coins are the only legal-tender coins in the country and accepted by public treasuries. These coins are as follows: The Belgian gold 20-franc coins; the Belgian silver coins of 5, 2, 1, $\frac{1}{2}$, francs bearing the effigy of Leopold II and of Albert, and the 2 and 1 franc coins bearing the dates 1830-1880 and the joint effigy of Leopold I and Leopold II; the Belgian nickel tokens of 1 franc and 50 centimes; the Belgian perforated copper-nickel coins of 25, 10, and 5 centimes; the Belgian copper coins of 2 and 1 centimes.

Article 1, paragraph 2, of the law of July 19, 1895, concerning the circulation of foreign bronze, nickel, and copper coins in the localities near the frontiers designated for this purpose, remains in force.

IRISH FREE STATE

MONETARY REFORM

[From *Moniteur des Intérêts Matériels*, Brussels, April 10-11, 1927]

A monetary commission consisting of seven members, representing the government and the banks, will control the issue of paper money. The total amount of the issue is not fixed, but in proportion to the cover in the shape of bars, British treasury bonds, or other media which are legal tender in Great Britain. An agency will be established in London to convert the Irish notes into pounds sterling at par. In addition to these new notes, there will be launched consolidated bank notes to a maximum amount of £6,000,000, to be distributed among the Irish banks. The latter will be backed by legal notes of the Free State and a special reserve established and maintained in order to prevent depreciation. Hence, the difference between the British notes still circulating and the future Irish notes will be only a difference in form.

ITALIAN CURRENCY LEGISLATION

[From Federal Reserve Bulletin, September, 1928]

CONVERTIBILITY OF NOTES OF THE BANK OF ITALY INTO GOLD

(Royal decree law, December 21, 1927, No. 2325)

ARTICLE 1. As from the day following that on which the present decree is promulgated, the Bank of Italy shall, on presentation at its head office in Rome, convert its own notes into gold, or at the option of the bank into exchange on foreign countries in which bank notes are convertible into gold.

The gold parity is fixed on the basis of a standard gold weight of 7.919 grams¹ to each 100 Italian lire.

ART. 2. Notes of the Bank of Italy, State notes until the time appointed for their retirement from circulation, and silver money coined in virtue of royal decree laws of September 7, 1926, No. 1506, and June 23, 1927, No. 1148, shall continue to have within the Kingdom their full legal value.

Nothing is changed in regard to the legal tender quality of said currency, nor in regard to the obligation of public banks and private individuals to accept it within the Kingdom as legal tender, any agreement to the contrary notwithstanding.

ART. 3. The Bank of Italy is authorized to revalue in its assets its reserves of gold, and of foreign exchange on countries in which bank notes are convertible into gold, in Italian lire on the gold basis defined in article 1. The net profits resulting from revaluation of reserves of the Bank of Italy shall be credited to the State. Such profits shall be applied:

(a) To the liquidation of the debt in notes of the Bank of Italy issued for account of the State;

(b) To the settlement of the difference in value, expressed in paper lire, resulting from revaluation at the gold parity prescribed by article 1 of the reserves in gold or its equivalent of the Bank of Naples and the Bank of Sicily, transferred to the Bank of Italy at the time of the unification of the issue of notes in the said bank, in conformity with the provisions of article 2, of royal decree law of May 6, 1926, No. 812;

(c) To the settlement of the difference in value, expressed in paper lire, resulting from revaluation at the above-mentioned gold parity, of the sum of \$90,000,000 transferred by the State to the Bank of Italy against a reduction of 2,500,000,000 lire in the debt of the royal treasury to the said bank, in accordance with article 1 of royal decree law of September 7, 1926, No. 1506;

(d) To the settlement of the difference in value, expressed in paper lire, resulting from revaluation at the above-mentioned gold parity, of purchases of other foreign exchange on countries in which bank notes are convertible into gold, which foreign exchange has been transferred by the State or the National Institute of Foreign Exchange to the Bank of Italy.

ART. 4. As from the date on which the present decree law becomes effective the Bank of Italy shall hold a reserve in gold and in exchange on foreign countries in which bank notes are convertible into gold, of not less than 40 per cent of the amount of its notes in circulation and of its other obligations payable at sight.

Notes issued by the Bank of Italy shall be secured not only by the said reserve in gold or its equivalent but by all other assets of the institution, in accordance with existing legislative provisions.

¹ By decree of Feb. 26, 1928 the gold weight is established as 7.919113 grams.

LATVIA

STABILIZATION OF THE ZLOTY

DECREE OF THE PRESIDENT OF THE REPUBLIC DATED THE 13TH DAY OF OCTOBER, 1927

(Published in the Journal of Laws, N88, paragraph 790)

[Based on cable advices]

According to Article 44, par. 6 of the Constitution and according to the law of August 2, 1926, granting to the President of the Republic authority to issue decrees having the force of law (Journal of Laws of the Republic of Poland N78 par. 443) I hereby decree as follows:

ARTICLE 1. The currency of the Republic of Poland is on gold basis. Its standard of value is zloty (zl.). The zloty is divisible into 100 grosz (gr.).

ART. 2. Five thousand nine hundred and twenty-four and forty-four hundredths zloty is coined out of one kilogram of pure gold.

ART. 3. The only legal tender, without limit as to amount, shall be gold coins minted in conformity herewith and the notes of the Bank of Poland, unless under regulations in force another manner of payment is provided.

ART. 4. The issue of the gold coins is unlimited.

ART. 5. The minting of gold coins is performed for Government account and for account of private persons who might wish to hand over a quantity of gold for that purpose containing not less than 100 grams of pure gold.

ART. 6. The total issue of coins minted of other metals (silver, nickel, and copper) is limited to 320,000,000 zlotys subject to increase only as the Government and the Bank of Poland recognize the necessity therefor. The last mentioned total issue includes the cash reserves of the treasury which consist of such coins.

ART. 7. The Minister of Finance is charged with the execution of the present decree.

ART. 8. The present decree comes into force from the date of its promulgation. The following become annulled: Decree of the President of the Republic respecting the monetary system (J. of L. N37/24, par. 401) also the law of the 23d of June, 1925, respecting changes in the decree of the President of the Republic dated the 23d of April, 1923, respecting changes in the monetary system (J. of L. N67, par. 466).

GOLD AND SILVER PRODUCTION IN 1926

[From the Mining Journal, London, December 17, 1927]

The Boliden deposits near Skellefteaa, discovered some years ago but hitherto only exploited on a small scale, yielded an increased production of gold, namely 460 kilograms, compared with only 18 kilograms in 1925, the first year of experimental workings; and the production of silver increased from 1,717 kilograms to 2,500.

SWITZERLAND

The domestic gold coinage executed in home mints during the year ended December 31, 1927, consisted of 5,015,000 20-franc pieces, having a face value of 100,300,000 francs (\$19,357,900).

The amount of gold coin withdrawn from monetary use for recoinage during 1927 was as follows: Domestic, 100,000,000 francs (\$19,300,000); foreign (French and Italian), 100,000,000 francs (\$19,300,000).

The estimated quantity of gold and silver used in the industrial arts during 1927 was as follows: Gold, 10,400 fine kilos (334,360 ounces), valued at 36,000,000 francs (\$6,948,000); silver, 32,950 fine kilos (1,059,342 ounces), valued at 3,000,000 francs (\$579,000).

LAWS AFFECTING THE CURRENCY

[From 1926 annual report of the Royal British Mint]

A decree issued in January, 1926, authorized new 5, 3, 2, and 1 copeck pieces to be struck in an alloy containing 95 per cent copper, 5 per cent aluminium, and weighing 5, 3, 2, and 1 grams, respectively.

WANDERINGS OF THE GOLD REMOVED BY THE SOVIET GOVERNMENT FROM RUMANIA IN 1916

[From weekly bullion circular of Samuel Montagu & Co., London, April 18, 1928]

Mystery and romance have accompanied the wanderings of the soviet gold valued at £1,043,000, the parcel specially marked from the time it was removed from Rumania to Russia in 1916. Owing to obstacles placed in the way of its realization on (recent) arrival in the United States of America, it was reshipped on the S. S. *Dresden* bound for Europe. Fear, however, of legal complications in France or England impelled the soviet authorities to take the remarkable step of transshipping the gold at sea—12 miles off Falmouth, on Friday last—to the S. S. *Reiher*. The next stage of its travels was Bremerhaven. Never in the history of the world has a treasure intrinsically so valuable found such difficulty in finding a welcome.

NOTE: See page 227, 1920 United States Mint report.

THE NEW ARABIAN COINAGE

[Extract from "The Near East and India," London, February 2, 1928]

A regulation has been published in the current issue of the "Umm al Qura" fixing the first of Shaaban (January 22) as the date for the coming into currency of the new Arabian silver coins—riyals, half riyals, and quarter riyals. These coins are of the same fineness and value as the hitherto current Turkish majidies and their corresponding fractions, which will from the date mentioned cease to be legal tender in all Government transactions. A slight adjustment has been introduced in the relative values of the new coins, 10 riyals (instead of 12 majidies) being equivalent to £1 sterling and each riyal being subdivided into 11 (instead of 9) piastres miri. Thus £1 sterling will be equivalent to 110 miri piastres as against 112 hitherto. It is perhaps to be regretted that the occasion was not used to introduce a complete decimal system with £1 as the equivalent of 100 piastres miri, but it was presumably considered that this change would create too violent a dislocation of local market conditions. There are already signs of a fall in the value of the Turkish majidie, which has been tentatively quoted at 13 or even 14 to the £1 sterling, but this tendency is scarcely likely to persist, as the stock of new coins is not yet sufficient to meet all needs.

BRITISH INDIA

The domestic silver coinage executed in homemints during the year ended December 31, 1927, consisted of 2,031,853 half-rupee pieces, having a face value of 1,015,927 rupees (\$370,813).

The amount of domestic silver coin withdrawn from monetary use for recoinage during 1927 was 15,883,089 rupees (\$5,797,327).

CURRENCY ACT No. IV, OF 1927 (EXTRACTS). (RECEIVED THE ASSENT OF THE GOVERNOR GENERAL ON MARCH 26, 1927)

AN ACT FURTHER TO AMEND THE INDIAN COINAGE ACT, 1906, AND THE INDIAN PAPER CURRENCY ACT, 1923, FOR CERTAIN PURPOSES, AND TO LAY UPON THE GOVERNOR GENERAL IN COUNCIL CERTAIN OBLIGATIONS IN REGARD TO THE PURCHASE OF GOLD AND THE SALE OF GOLD OR STERLING.

1. (1) This act may be called the currency act, 1927.

(2) It extends to the whole of British India, including British Baluchistan and the Sonthal Parganas.

(3) It shall come into force on the 1st day of April, 1927.

2.—In the Indian coinage act, 1906, (a) for section 11 the following section shall be substituted, namely: "11. Gold coins, whether coined at His Majesty's Royal Mint or at any mint established in pursuance of a proclamation of His Majesty as a branch of His Majesty's Royal Mint, shall not be legal tender in British India in payment or on account, but such coins shall be received at any Government currency office and, at any time after the 30th day of September, 1927, at any Government treasury other than a subtreasury, at the bullion value of such coins calculated at the rate of 8.47512 grains troy of fine gold per rupee."

3.—In the Indian paper-currency act, 1923, (a) to section 2, after the words "in this behalf" the following shall be added, namely: "and 'gold bullion' includes gold coin"; (b) in clause (a) of section 11 the words "or in gold coin which is legal tender under the Indian coinage act, 1906," shall be omitted; (c) in section 13 (i) the words "for gold coin which is not legal tender under the Indian coinage act, 1906, or" shall be omitted; and (ii) for the figures "11.30016" the figures "8.47512" shall be substituted; (d) in section 18 (i) in subsection (4) the words "sovereigns, half sovereigns" and the words "coin and" shall be omitted; and (ii) in clause (a) of subsection (8), for the figures "11.30016" the figures "8.47512" shall be substituted; (e) in section 19 (i) in subsection (3) the words "sovereigns, half sovereigns" shall be omitted, and, in the explanation, after the word "subsection," the following words and figures shall be inserted, namely: "gold bullion shall be reckoned at the rate of 1 rupee for 8.47512 grains troy of fine gold, and"; and (ii) in subsection (5) the words "coin or" and the word "coin" where it occurs for the second time shall be omitted.

4.—Any person who offers for sale to the Governor General in council at the office of the master of the mint, Bombay, or at any other place notified in this behalf by the Governor General in council in the Gazette of India, gold in the form of bars containing not less than 40 tolas of fine gold shall, subject to such conditions as the Governor General in council may, by notification in the Gazette of India, prescribe, be entitled to receive payment for the same at the rate of 21 rupees, 3 annas, and 10 pies per tola of fine gold.

5.— (1) The Governor General in council shall sell, to any person who makes a demand in that behalf at the office of the controller of the currency, Calcutta, or of the deputy controller of the currency, Bombay, and pays the purchase price in legal-tender currency, gold for delivery at the Bombay Mint at the rate of 21 rupees, 3 annas, and 10 pies per tola of fine gold, or at the option of the controller or the deputy controller, as the case may be, sterling for immediate delivery in London at an equivalent rate:

Provided that no person shall be entitled to demand an amount of gold or sterling of less value than that of 1,065 tolas of fine gold.

(2) For the purpose of determining the equivalent rate applicable to the sale of sterling under this section, 21 rupees, 3 annas, and 10 pies shall be deemed to be equivalent to such sum in sterling as is required to purchase one tola of fine gold in London at the rate at which the Bank of England is bound by law to give sterling in exchange for gold, after deduction therefrom of an amount representing the normal cost per tola of transferring gold bullion in bulk from Bombay to London, including interest on its value during transit.

(3) The Governor General in council shall, from time to time, determine the equivalent rate in accordance with the provisions of subsection (2), and shall notify the rate so determined in the Gazette of India.

CONDITIONS ATTACHING TO THE ACCEPTANCE OF GOLD BY THE MASTER OF THE MINT, BOMBAY

[From Samuel Montagu & Co. Weekly Bullion Letter, April, 27, 1927]

In accordance with the new Indian currency arrangements the government of India announced on the 1st of April last the following conditions attaching to the acceptance of gold by the Master of the Mint, Bombay. The rate as fixed by the currency act is to be Rs. 21 As. 3 Ps. 10 per tola of fine gold (i. e., the price equal to Rs. 13 As. 5 Ps. 4 per full-weight sovereign). Either fine or unrefined gold may be tendered. In the case of the former the minimum fineness is limited to 0.990; qualities lower than that can only be accepted as unrefined. All gold tendered will be melted and assayed upon receipt. A charge of 2 pies per tola gross weight will be made for melting and assaying fine gold, with a minimum charge of Rs. 12. The charges relating to unrefined gold or material found to be brittle can be obtained from the master of the mint. Gold coin will be treated as unrefined gold. No tender less than 40 tolas (15 ounces) will be entertained. No gold bar exceeding 3,200 tolas (1,200 ounces) will be accepted. Payment of not more than 95 per cent of the value of the gold tendered will be made on receipt of the gold, provided the master of the mint is satisfied that preliminary certificate shall be issued.

INDIAN CURRENCY LEGISLATION

[From the Economist, London, February 19, 1927]

The government of India has published in a Gazette Extraordinary the texts of three bills embodying the recommendation of the Hilton-Young Currency Commission. The first bill is to establish a gold-currency standard for British India. The second bill is further to amend the Imperial Bank of India act, 1920, for certain purposes. The third bill is to amend the coinage act, 1925, for certain purposes, and to lay upon the government certain obligations in regard to the purchase of gold and the sale of gold exchange. The bills have been laid before the legislative assembly and circulated for comment. Government has been well advised to split up the legislation under these three headings. Their action in embodying the gold standard and reserve-bank measures in the same bill has been criticised. But the two subjects are so intimately correlated that it is difficult to see how they could have done otherwise. This bill may prove comparatively noncontroversial in the assembly, and if so the grouping of the two measures under the one heading will be justified in the event. The headquarters of the reserve bank will be Bombay. The directorate will consist of a governor, deputy-governor, three officially nominated members, and a government officer, as well as nine directors elected by the shareholders themselves. The capital of the new reserve bank will be 5 crores, of which 30 per cent will be offered to the Imperial Bank as an institution. India will be on a gold-exchange standard until the reserve bank takes over control of the note issue. The gold-bullion standard will accordingly become effective not later than January 1, 1931. A schedule is given of 26 banks who will maintain a minimum balance with the reserve bank of $7\frac{1}{2}$ per cent of demand liabilities and $2\frac{1}{2}$ per cent of time liabilities. The Imperial Bank of India will act as the reserve bank's sole agent in places where the reserve bank has no branch.

[From the Economist, London, March 24, 1928]

In view of the bitter opposition evoked, it is not anticipated here that the reserve-bank issue will be revived for some years, probably not until India gets a new constitution, and therefore an assembly at the same time more representative and less apprehensive of the overt and unseen and always far-reaching influence exerted by the India office and the semi-independent Indian executive. The revised bill embodied many provisions designed to strengthen Indian influence in the electorate and governing body, but neither modifications nor protestations availed to convince legislators that the new bank would, in practice, be under Indian control or be utilized exclusively to support Indian interests, unless the legislators themselves were strongly represented on the board. In view of the utter impossibility of making this concession without subordinating the new institution to undesirable influences, the finance member had no practical alternative but to abandon the bill. In effect, therefore, the sole gain to India resulting from the

activities of the Hilton-Young Commission has been the stabilization of the rupee at 1s. 6d., a decision which could have been quite easily reached without its assistance.

Total.....	16,785,000	8,366,000	3,730,064

¹ Conversion rate, 1 piaster=\$0.44586, at the 1927 average price of silver in London, \$0.57070 per fine ounce.

The amount of domestic silver coin withdrawn from monetary use for recoinage during 1927 was 877,120 piasters (\$391,073).

The quantity of silver produced from lead ores during 1927 was 316 fine kilos (10,159 ounces), valued at 9,875 piasters (\$4,403).

The Indo-Chinese piaster was at a premium in exchange over its metallic value. Highest premium, 17.8 per cent of metallic value; lowest, 8.4 per cent; average, 12.8 per cent.

LAWS AFFECTING THE CURRENCY

An executive order of April 7, 1927, fixed the maximum of the fiduciary circulation of the Bank of Indo-China at four times the amount of the metallic reserve, with the proviso that this circulation must not exceed 175,000,000 piasters.

CIRCULATING MEDIA

[From Annual 1927 Bullion Circular of Samuel Montagu & Co., London]

The vast hinterland has always been a drain upon the silver supplies of China proper. The following extract from the Pekin Gazette in February, 1927, is illuminating:

"Only a few years ago Mongolia held one of the largest stocks of silver in the world. The State and monastery chests were overflowing with Hamburg and Russian bar silver and Mexican and Chinese dollar coins. No paper currency had ever been used in Mongolia, the population transacting all their business in silver, and only on a small scale in Russian gold. These enormous stocks easily withstood the initial crude attempts on the part of Soviets to get at them by means of barter and trade. Seeing this, a more perfect method was brought into play, its main lever being the newly-organized Mongolian Commercial and Industrial Bank, and in November, 1925, the first Mongolian paper, the 'tuhrik,' made its appearance. At first not only the population but many government offices refused to accept it, and it was only after a special edict had been promulgated, threatening with a punishment of five years' penal servitude anyone who would refuse to accept it or otherwise undermine its credit, that the circulation of the 'tuhrik' was established."

The usual result ensued, the paper money went to a discount, and an issue of silver "tuhrik"—coined in Leningrad and composed of inferior quality metal—suffered a similar fate.

THE PALESTINE CURRENCY ORDER IN COUNCIL 1927, DATED FEBRUARY 7, 1927

[From Official Gazette of the Government of Palestine, August 16, 1927]

1. (1) The standard currency for Palestine shall be the Palestine pound, divided into 1,000 mils.

(2) Every contract, sale, payment, bill, note, instrument, and security for money, and every transaction, dealing, matter, and thing whatsoever relating to money or involving the payment of, or the liability to pay, any money, shall, in the absence of express agreement to the contrary, be deemed to be made, executed, entered into, done, and had in Palestine according to the said standard.

2. (1) There may be coined from time to time under the direction of the master of the mint for use in Palestine:

(a) A gold coin of one Palestine pound, containing 123.27447 grains of standard gold, and being otherwise of such composition and weight and subject to a remedy of such amount as may be approved;

(b) Silver coins of 100 and 50 mils, of such fineness, composition, and weight and subject to remedies of such amount as may be approved;

(c) Coins of such lower denominations as may be approved, of such weight and composition and subject to remedies of such amount as may be approved.

3. (1) Subject as hereinafter provided, a tender of payment of money in Palestine, if made in any of the coins issued under this order, shall, if the coins have not been illegally dealt with, and in the case of gold and silver coins have not become diminished in weight by wear or otherwise so as to be of less weight than the weight declared by proclamation made by the high commissioner, with the approval of the master of the mint and of a secretary of state to be the least current weight, be a legal tender:

(a) In the case of gold coins for the payment of any amount;

(b) In the case of silver coins for the payment of 2 pounds;

(c) In the case of coins of any denomination lower than 50 mils and not lower than 10 mils, for the payment of an amount not exceeding 200 mils;

(d) In the case of coins of any denomination lower than 10 mils, for the payment of an amount not exceeding 100 mils.

(2) Each coin shall be a legal tender only for the amount of its denomination.

4. Where any sum due to be paid in Palestine after the commencement of this order is payable in Egyptian pounds or in other denominations of Egyptian currency, whether the obligation to make the payment was incurred before or within six months after the commencement of this order, the payment may be made in Palestine pounds or other denominations of Palestinian currency at the rate of one Palestine pound for every nine hundred and seventy-five thousandths of an Egyptian pound and so in proportion

CURRENCY NOTES

[From Official Gazette, April 1, 1928]

"The Currency Notes Ordinance, 1927," authorizes the currency board to issue and reissue currency notes; to pay the bearer of a lawfully issued currency note the amount named therein, said amount to be a charge on the moneys and securities in the hands of the board, on failing them, on the general revenues of Palestine. A legally issued currency note shall be a legal tender of the amount expressed therein.

THE CURRENCY ACT B. E. 2471 OF SIAM

By the King's most excellent majesty: Whereas it is expedient to consolidate and amend the law regulating the currency of Siam and the maintenance of its value in terms of gold, it is hereby enacted as follows:

1. This act shall be called "The currency act B. E. 2471."
 2. It shall come into force from the day of its promulgation in the Government Gazette.

3. On and from the date of enforcement of this act, the paper currency act R. S. 121, the coinage act R. S. 122, the gold standard act R. S. 127, as subsequently amended from time to time, together with all notifications issued thereunder, and the proclamation issued on June 21, B. E. 2460, prohibiting the export of silver, are hereby repealed.

FORMS OF CURRENCY

6. The unit of currency is the baht,¹ divided into 100 satang.

7. The minister may cause the following coins to be minted, of the respective weights, fineness, and remedies specified in the schedule:

Silver:

- (1) Baht.
- (2) Fifty satang.
- (3) Twenty-five satang.

Nickel:

- (1) Ten satang.
- (2) Five satang.

Bronze: Satang.

8. The currency department may issue notes of the prescribed denominations and authenticated in the prescribed manner.

A note is said to be "in circulation" from the time of its issue by the currency department until its return to that department.

9. (1) Notes and baht coins shall be legal tender without limit as to amount.
- (2) Fifty and 25 satang pieces shall be legal tender up to 5 baht.
- (3) Nickel and bronze coins shall be legal tender up to 1 baht.

GOLD VALUE OF THE BAHT

11. (1) The minister shall receive or deliver gold at Bangkok at the rate of 1 baht of legal-tender money for every 0.66567 gramme of fine gold.²

(2) The minister may at his option, in lieu of receiving or delivering gold as aforesaid, receive or deliver abroad gold, or gold exchange, in exchange for legal-tender money, for immediate delivery, at such places and at such rates as he may notify from time to time. Such rates shall be 1 baht for every 0.66567 gramme of fine gold, with an addition or deduction, as the case may be, representing the approximate cost of conveying gold to or from Bangkok and the place abroad at which such receipt or delivery takes place.

(3) No person shall be entitled to demand such exchange for an amount less than 50,000 baht.

SPECIAL PROVISIONS REGARDING NOTES

22. Notes issued under any law for the time being in force shall be deemed to have been issued on the security of the general revenues of Siam as well as on that of the reserve.

23. No notes shall be issued save in exchange for—

(a) Notes previously issued, which shall thereupon be withdrawn from circulation, or

(b) Gold, or gold exchange, which shall forthwith be credited to the reserve at the rate of 1 baht for every 0.66567 gramme of fine gold.

24. All liability of the Government for the payment of notes shall be held to have been discharged upon delivery by the minister of gold or gold exchange, in accordance with the provisions of section 11, in exchange for notes tendered to him.

Given on the 15th day of April B. E. 2471 (A. D. 1928) being the fourth year of the present reign.

Schedule

Metallic description	Name of coin	Standard	
		Weight	Fineness
		Grammes	
	Baht.....	15	Silver 900.
Silver.....	50 satang.....	7.5	Copper 100.
	25 satang.....	3.75	Silver 650.

	5 satang.....	2	Silver 650.
Bronze.....	Satang.....	5	Copper 350.
			Pure nickel.
			Do.
			Copper, 95 per cent.
			Tin, 4 per cent.
			Zinc, 1 per cent.

¹ The "baht" is the same as the "tical." The latter is a word of foreign origin and is unknown in Siamese.

² United States equivalent, \$0.4424.

STRAITS SETTLEMENTS

The domestic silver coinage executed in 1927 at the royal mint, London, consisted of 5,000,000 10-cent pieces, having a face value of 500,000 Straits Settlements dollars (\$283,900).

The total import of United States gold coin and bullion during 1927 was as follows: Coin, 4,366,946 Straits Settlements dollars (\$2,479,770); bullion, 388,958 Straits Settlements dollars (\$220,870).

Notes of banks of issue.....	-----	-----	750, 000	750, 000

Imports of silver coin during 1927: From Trieste, Italy, 15,000,000 Maria Theresia thalers (\$6,437,250); from Paris, France, 187,500 Maria Theresia thalers (\$80,466).

The quantity of gold produced during 1927 was 24,000 vakiet (672 kilos, or 21,605 ounces).

[From questionnaire, courtesy United States Bureau of Mines]

ALGERIA

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1927, was as follows: Gold, 834 fine kilos (26,813 ounces); silver, 6,858 fine kilos (220,485 ounces).

Statistics from unofficial sources show that 5,261 kilos of silver (169,141 ounces) were mined in 1925. Figures for later years are not yet available.

Stock of gold and silver and note circulation of the Bank of Algeria on December 31, 1927: Gold and silver, 80,420,817 francs (\$15,521,218); Bank of Algeria notes, 1,355,310,090 francs.

Price of gold in 1927: Highest, 474.4 francs per kilo (one-tenth fine); lowest, 448.4; average, 462.9.

The quantity of silver produced during 1927 was 3,673 kilos (118,087 ounces).

[From official questionnaire, courtesy United States Bureau of Mines]

BECHUANALAND PROTECTORATE

The quantity of gold and silver produced from deep mines during the year ended December 31, 1927, was as follows: Gold, 3,807 fine ounces, valued at £15,979 (\$77,762); silver, 418 fine ounces, valued at £42 (\$204).

The currency of the Protectorate consists of coins and paper money current in the Union of South Africa.

BELGIAN CONGO

The production of gold during the year ended December 31, 1927, was 4,261 fine kilos (136,991 ounces).

The losses, destructions, remeltings and exportations of gold and silver coin reached such proportions that it may safely be inferred that gold and silver coins no longer exist in Congo, the more so as by the decree of November 14, 1927, the embargo on the exportation of gold and silver coins of legal tender in the colony has been lifted.

The total amount of notes of banks of issue used for monetary purposes in the colony on December 31, 1927, was 124,619,448 paper francs.

The Congo franc is equivalent to one-fifth of the belga and is on a par therewith. Hence the premium on the Congo gold franc was one-fifth of the premium on the gold belga.

BRITISH WEST AFRICA

GAMBIA

The amount of British silver coin withdrawn from monetary use for shipment to England during the year ended December 31, 1927, was £1,600 (\$7,786).

¹ Foreign coin.

² Reported to the Director of the Mint in value only. Converted to fine ounces on basis of legal silver content of the coin and at the average price of silver in London.

³ Gold and silver.

⁴ Gold delivered by the Reichsbank.

⁵ Domestic coin.

⁶ For year ended Apr. 30, 1927.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEARS 1926 AND 1927

The following compilations have been made from such data as are available—avowedly incomplete. The amount of gold and silver in circulation in many countries is not obtainable, and in some countries that held by private banks can not be given.

For the United States the figures given cover all domestic gold and silver coin, but only such bullion and foreign coins as owned by the Government and Federal reserve banks. All foreign coin which comes into possession of the Government is converted into bullion.

Monetary stock of principal countries of the world, end of calendar year 1926

[Stated in United States money (000 omitted), except paper stock, which is stated in monetary unit of issuing country (000 omitted)]

¹ Includes gold and silver certificates (representing coin and bullion held in trust in the Treasury) redeemable on demand.

² Including some silver.

³ Last year's figures or figures of previous years.

⁴ United States Government and bank notes.

⁵ Gold standard established Apr. 3, 1926.

⁶ Government notes only.

⁷ United States gold coin.

⁸ On June 30, 1926.

⁹ New monetary unit established Sept. 17, 1925.

¹⁰ Estimated.

¹¹ Stock in national bank.

^{11a} On Oct. 26.

¹² Including minor coin.

¹³ Monetary standard not established.

¹⁴ Exclusive of Spanish bank notes.

¹⁵ Stock in Bank of Italy, sole bank of issue since July 1, 1926.

¹⁶ On Jan. 1, 1927.

¹⁷ Incomplete.

¹⁸ Fluctuates with the price of silver.

¹⁹ On Nov. 30, 1926.

²⁰ Union of South Africa coin.

²¹ In addition to this, there circulates about £3,000 Union of South Africa notes.

NOTE.—Figures given represent each country's stock at the end of the year, except when otherwise indicated. Population figures are from the Commerce Yearbook, 1926. Blanks indicate no figures available, rather than no stock. Gold held abroad as follows, not included in the above figures (presumably reported by the country having actual possession): Canada, \$27,962,178; Czechoslovakia, \$18,809,484 in gold and \$1,617,862 in silver; Estonia, \$2,563,516; Egypt, \$142,307; France, \$359,813,935; Germany, \$40,560,696; Greece, \$4,825,000; Japan, \$114,655,000; Lithuania, \$3,034,600; Rumania, \$82,630,958; Switzerland, \$14,276,596; Straits Settlements, \$41,637; Union of South Africa, \$2,538,279.

Monetary stock of principal countries of the world, end of calendar year 1927

[Stated in United States money (000 omitted), except paper stock, which is stated in monetary unit of issuing country (000 omitted)]

¹ Average price per fine ounce in London.² Estimate based on United States imports of ore and bullion.³ Estimate based on other years' production.⁴ Amount exported.⁵ Last year's figures.⁶ For years ending June 30, 1926, and 1927, respectively.

Production of gold and silver in the world since 1860

[The annual production of 1860 to 1872 is obtained from 5-year-period estimates compiled by Dr. Adolph Soetbeer. Since 1872 the estimates are those of the Bureau of the Mint]

Calendar year	Gold		Silver

¹ At the average par price of a fine ounce of silver in London, excepting the years 1918 to 1922, inclusive, for which the mean of the New York bid and asked prices was used.

Production of gold and silver in the world since the discovery of America

[From 1493 to 1885 is from a table of averages for certain periods, compiled by Dr. Adolph Soetbeer; for the years since, the production is the annual estimate of the Bureau of the Mint]

Period	Gold			Silver			Percentage of production			
	Annual average for period		Total for period		Annual average for period		By weight		By value	
	Fine ounces	Value	Fine ounces	Value	Fine ounces	Coining value	Gold	Silver	Gold	Silver
1493-1520-----	186,470	\$3,855,000	5,221,160	\$107,931,000	1,511,050	\$1,954,000	11	89	66.4	33.6
1521-1544-----	230,194	4,758,000	5,524,556	114,205,000	2,899,930	3,740,000	7.4	92.6	56.9	44.1
1545-1560-----	273,596	5,656,000	4,377,544	90,492,000	10,017,940	12,952,000	2.7	97.3	30.4	69.6
1561-1580-----	219,006	4,505,000	4,398,120	90,917,000	9,628,925	12,450,000	2.2	97.8	26.7	73.3

REPORT OF THE DIRECTOR OF THE MINT

THE MINT DEPARTMENT

UNITED STATES OF AMERICA

WASHINGTON, D. C., September 30, 1926

IN compliance with the provisions of section 346, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1926, being the fifty-fourth annual report of the Director of the Mint. This report is submitted for publication in connection with the annual report of the Department upon the production and consumption of the precious metals in the United States for the calendar year 1926.

OPERATION OF THE MINTS AND ASSAY OFFICES

REPORT OF THE DIRECTOR

PART I

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1926

1

The domestic coinage made during the fiscal year ended June 30, 1926, amounted to \$91,521,665 in gold, \$19,135,175 in silver, and \$1,154,115 in minor coin, a total of \$111,811,055 represented by 172,174,322 pieces, which compares with the prior year's total value of \$87,450,944 represented by 199,443,318 pieces. Each of the three mints, at Philadelphia, San Francisco, and Denver, made gold, silver, and minor coin. The demand for nickels and cents was again in evidence, nearly 302,000,000 pieces having been made as compared with 111,000,000 during last year and 108,100,000 during the next preceding year. The gold coinage was considerably materially reduced (by about 50 per cent). The number of silver dollars minted totaled 11,321,707 and silver half dollars 14,179,736 pieces, each of the three mints contributing 3,773,700 in addition to the above the mint at Philadelphia 26,478,000 pieces. The gold coinage was as follows: 46,000 pieces in gold coins for Mexico, 5,220,000 pieces of silver for Poland, Guatemala, Yucatan, and Peru, and 11,000,000 pieces in silver for Colombia and Ecuador. A grand total of 55,220,000 pieces, being an amount of 55,220,000 pieces as compared with 205,000,000 pieces during the prior year.

REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,

BUREAU OF THE MINT,

Washington, D. C., September 20, 1926.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1926, being the fifty-fourth annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1925.

OPERATION OF THE MINTS AND ASSAY OFFICES

INSTITUTIONS OF THE MINT SERVICE

Since the Charlotte assay office was closed on June 30, 1913, 11 mint service institutions have been operated: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which makes large sales of fine gold bars; mints at New Orleans and Carson City conducted as assay offices; and assay offices at Boise, Helena, Deadwood, Seattle, and Salt Lake City. The seven last-named institutions are, in effect, bullion-purchasing agencies for the large institutions, and also serve the public by making assays of ores and bullion. Electrolytic refineries are operated at the New York, Denver, and San Francisco institutions.

COINAGE

The domestic coinage made during the fiscal year ended June 30, 1926, consisted of \$64,315,565 in gold, \$19,183,178 in silver, and \$5,115,675 in minor coin, a total of \$88,614,418 represented by 372,171,282 pieces, which compares with the prior year's total domestic coinage of \$278,610,944 represented by 190,443,558 pieces. Each of the three coinage mints, at Philadelphia, San Francisco, and Denver, made gold, silver, and minor coins. The demand for nickels and cents was again in evidence, nearly 302,000,000 pieces having been made as compared with 111,000,000 during last year and 168,000,000 during the next preceding year. The gold coinage was consequently materially reduced (by about 70 per cent). The number of silver dollars executed totaled 11,432,700, and subsidiary silver coins 54,479,756 pieces, each of the three mints contributing thereto. In addition to the above the mints struck 16,676,000 pieces foreign coin as follows: 40,000 pieces in gold for Costa Rica and Guatemala, 6,230,000 pieces of silver for Poland, Guatemala, Venezuela, and Peru, and 10,406,000 pieces in nickel for Salvador and Peru. A grand total of 388,847,282 pieces of coin as the output for 1926 compares with 203,166,558 pieces during the prior year.

GOLD OPERATIONS

Gold acquired by the Government at the several mint service institutions during the fiscal year 1926 totaled \$178,800,676.48. United States gold coin received by the mints for recoinage amounted to \$2,088,238.39; transfers of gold between mint offices totaled \$27,604,313.30; the aggregate amount of gold received by the several mint service institutions during the fiscal year 1926 was \$208,493,228.17, which compares with \$225,681,342.27 during the prior year.

SILVER OPERATIONS

Receipts of purchased silver during the fiscal year 1926 totaled 4,992,831.43 fine ounces, the average cost of which was 69½ cents per ounce, total cost being \$3,470,901.73. Silver received in exchange for bars bearing the Government stamp totaled 1,656,972.97 fine ounces; United States silver coin received for recoinage totaled 1,828,581.76 fine ounces, the recoinage value being \$2,527,847.60; silver deposited in trust by other governments totaled 2,489,563.52 fine ounces; and transfers between mint service offices totaled 2,048,557.39 fine ounces, making the aggregate quantity of silver received by the several mint service offices during the fiscal year 13,016,507.07 fine ounces, as compared with 10,420,912.01 fine ounces during the prior year.

Silver dollars remaining to be coined from bullion purchased under the Pittman Act amounted to about 6,500,000.

The New York market price of silver during the fiscal year ended June 30, 1926, averaged \$0.68317; the lowest price was \$0.633025, on April 22, 1926; and the highest price \$0.731875 on September 5, 1925.

REFINERIES

The three refineries—at New York, San Francisco, and Denver—were in operation throughout the year, reducing the large quantities of unparted and unrefined bars into usable gold and silver bullion.

Production of electrolytically refined gold totaled during the past fiscal year 3,272,689 ounces, as compared with 3,319,076 ounces during the fiscal year 1925. Electrolytically refined silver totaled 4,977,646 ounces, as compared with 5,293,985 ounces, during the fiscal year 1925.

IMPROVEMENTS

At the Denver Mint an improvement in the deposit melting room has been the installation of gas in connection with the melting operations. The heat of the waste gases is utilized in connection with a recuperator for preheating the air used for mixing with the gas. This has resulted in reducing the time required for the various melts, increasing the life of the graphite crucibles, as well as reducing considerably the temperature of the room.

At the San Francisco Mint two large rectangular-type oil-burning melting furnaces in the deposit-melting room were replaced by three cylindrical-type oil-burning furnaces having greater fuel economy and smaller maintenance cost. In the assay department the boiling table was reconstructed to eliminate portable burners with their connecting hose, and to provide a clear table top with burners rigidly

1. Sesquicentennial gold quarter-eagle
2. Sesquicentennial half dollar
3. California's Jubilee half dollar
4. Vancouver Centennial half dollar

supported, having pipe connections underneath and a stop cock for each burner. This makes a more efficient working apparatus.

At the Philadelphia Mint two new automatic weighing machines are being constructed.

At the New York assay office the bar department was moved from the vicinity of the cashier's office near the public lobby on the first floor to the second floor of the rear building, where more space could be assigned and the noise of stamping bars would be less objectionable.

COMMEMORATIVE COINS

Special design coins authorized by Congress were issued during the past fiscal year, as below:

In commemoration of the one hundred and fiftieth anniversary (sesquicentennial) of the signing of the Declaration of Independence, a two and one-half dollar gold piece and a silver half dollar were issued. The gold coin bears on its obverse a draped female figure representing Liberty, standing on a segment of the globe and holding a lighted torch in one hand, while in the other is held a scroll (the Declaration of Independence); the dates 1776 and 1926 also appear. On the reverse is a likeness of Independence Hall. Other mottoes and inscriptions are as required by the coinage laws. The coin was designed by J. R. Sinnock, mint engraver.

The obverse of the sesquicentennial half dollar shows profile likenesses of Washington and Coolidge, while on the reverse is shown an illustration of the Liberty Bell with the dates 1776 and 1926. This coin also was designed by J. R. Sinnock.

In commemoration of the seventy-fifth anniversary of the admission of California into the Union of States Congress authorized the issue of a special design half dollar. The obverse illustrates a miner washing or "panning" gold from gravel, with the wording "California's Diamond Jubilee." On the reverse California's symbolic bear is shown. This coin was designed by J. Mora.

The Vancouver half dollar, authorized by Congress in commemoration of the one hundredth anniversary of the founding of Fort Vancouver, Wash., by the Hudson Bay Co., bears on the obverse the likeness and name of Dr. John McLoughlin, the builder of the fort, with the dates 1825 and 1925. On the reverse appears a full-length figure of a frontiersman with gun, while in the background the fort and a mountain peak are illustrated. The coin was designed by Mrs. Laura G. Frazer.

STOCK OF COIN AND MONETARY BULLION IN THE UNITED STATES

On June 30, 1926, the estimated stock of domestic coin in the United States was \$2,054,657,476, of which \$1,232,243,292 was gold, \$533,491,184 standard silver dollars, and \$288,923,000 subsidiary silver coin.

The stock of gold bullion in the mints, assay offices, and Federal reserve banks on the same date was valued at \$3,268,733,645, an increase during the year of \$102,687,731; the stock of silver bullion was 10,073,737.60 fine ounces, a reduction of 7,547,023.58 fine ounces.

PRODUCTION OF GOLD AND SILVER

Domestic gold production during the calendar year 1925 was \$49,860,200, as compared with \$52,277,000 in 1924. The output continues at approximately half of that for the record year 1915, when the total was \$101,035,700.

Silver of domestic production during 1925 totaled 66,155,424 ounces, valued at \$45,911,864; this compares with 65,407,186 ounces, valued at \$43,822,814, for 1924, and with the record production of 1915, 74,961,075 fine ounces, valued at \$37,397,300.

INDUSTRIAL CONSUMPTION OF GOLD AND SILVER

Gold consumed in the industrial arts during the calendar year 1925 is estimated at \$65,953,870, of which \$36,161,849 was new material.

Silver used in the arts is estimated at 39,826,579 fine ounces, of which 29,929,163 fine ounces was new material.

As compared with the prior year, gold consumption was about the same and silver consumption increased about 6,200,000 ounces.

IMPORT AND EXPORT OF DOMESTIC GOLD COIN

The net export of domestic gold coin during the fiscal year ended June 30, 1926, was \$46,614,511; during the prior fiscal year there was net export of \$107,910,658. During the 12 fiscal years 1915-1926, since the opening of the World War, there has been a net export of \$935,718,226. Since 1870 the net export of domestic gold coin has been \$1,813,367,290, as per tabulation by fiscal years, which may be found in another section of this volume.

APPROPRIATIONS, EXPENSES, AND INCOME

Appropriations available for mint service during the fiscal year 1926 totaled \$1,693,204.17, and reimbursements to appropriations for services rendered amounted to \$144,742.17, making a total of \$1,837,946.34.

Expenses amounted to \$1,800,042.69, of which \$1,735,217.74 was chargeable to appropriations and \$64,824.95 chargeable to income.

The income realized by the Treasury from the mint service aggregated \$10,400,989.25, of which \$9,546,613.78 was seigniorage. The seigniorage included \$2,590,024.53 on the coinage of silver dollars, which amount offsets an equal loss which was incurred when the silver dollars were melted and sold under terms of the Pittman Act. The seigniorage on subsidiary silver coin was \$2,607,772.55; on nickel coin, \$2,165,755.84; and on bronze coin, \$2,183,060.86.

Summary of appropriations, expenses, and balances, fiscal year 1926

Items	Salaries and wages	Contingent expenses	Freight on bullion	Total
Appropriations				
Earnings credited to appropriations	\$1,360,929.17	\$324,775.00	\$7,500.00	\$1,693,204.17
Total available	114,217.92	30,524.25		144,742.17
Expenses	1,475,147.09	355,299.25	7,500.00	1,837,946.34
Unexpended balances	1,409,204.10	319,252.82	6,760.82	1,735,217.74
	65,942.99	36,046.43	739.18	102,728.60

¹ Includes \$749.17 paid from special fund—charges on silver dollar bullion sold.

DEPOSITS OF GOLD AND SILVER, INCOME, EXPENSES, AND EMPLOYEES, BY INSTITUTIONS, FISCAL YEAR 1926

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1926, and the number of employees on June 30, 1926, at each institution, are shown in the following table:

Institutions	Number of deposits of gold and silver	Number of mint service transfers	Coining value of gold and silver received ¹	Gross income	Gross expense	Excess of income (+) or of expenses (-)	Employees June 30, 1926
Philadelphia	10,687	1,920	\$13,952,824.91	\$6,297,180.07	\$814,081.93	+\$5,483,098.14	336

PURCHASE OF MINOR COINAGE METAL FOR USE IN DOMESTIC COINAGE

During the fiscal year 1926 there were purchased at the mint at Philadelphia 24,558,058.81 troy ounces of minor coinage metals at a cost of \$403,788.27, which includes 6,522,702.09 troy ounces in nickel blanks prepared for stamping, costing \$227,656.65.

There were also purchased during the same period at the mint at San Francisco 5,324,991.64 troy ounces of minor coinage metals at a cost of \$61,364.47. The Denver Mint purchased 4,230,639.58 troy ounces of minor coinage metals for use in coinage, costing \$54,389.54.

MINOR COIN DISTRIBUTION COSTS

The minor coinage distribution costs paid during the fiscal year 1926 from the profits on minor coinage amounted to \$62,550.13.

MINOR COINS OUTSTANDING

The following statement shows the coinage of minor coins, by denominations, the amount on hand, issued, melted, and outstanding June 30, 1926. Minor coins were first manufactured at the Philadelphia Mint in 1793; at the San Francisco Mint in 1908; at the Denver Mint in 1911.

Denominations	Coined	On hand	Issued (net)	Melted	Amount issued and outstanding June 30, 1926
Philadelphia:					
Copper cents	\$1,562,887.44		\$1,562,887.44

PROOF BULLION (1.000 FINE)

In order to establish uniformity in assay of bullion in the offices of the mint service, all proof gold and proof silver is made at the mint at Philadelphia and furnished to other offices when required.

The amount made during the fiscal year 1926 was: Gold, 685 ounces. No proof silver was made during the year.

OPERATIONS OF THE MELTING AND REFINING AND OF THE COINING DEPARTMENTS, FISCAL YEAR 1926

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1926, was 25.40 million fine ounces of gold and 66.97 million fine ounces of silver. There were also operated upon at the coinage mints 106.29 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative officers, as prescribed in section 3542, Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

REFINING OPERATIONS

The net product of electrolytically refined gold and silver of the mint service during the fiscal year 1926 was 8,250,334.858 fine ounces; other electrolytic output included the equivalent of the refined metals used for aiding the processes, 1,748,930.168 fine ounces; the product of melting operations (only) totaled 1,774,870.451 fine ounces, making the total output of the refineries 11,774,135.477 fine ounces. Details are shown in the following table:

WASTAGE AND LOSS ON SALE OF SWEEPS

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1926, was \$6,050.82. A loss of \$11,356.34 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the table following:

Item	Mint at—			Assay office at New York	Total
	Philadel-phia	San Fran-cisco	Denver		
Gold wastage:					
Melting and refining department					
Coining department	\$151.19				\$151.19

Coining department	437.10	36.73	18.05		491.88
Loss on sale of sweeps	1,292.21	1,459.14	2,830.13	5,774.86	11,356.34
Total wastage and loss	4,664.65	3,442.43	3,226.50	6,073.58	17,407.16
Reimbursements:					
Nickel and bronze wastage on domestic coin, from minor coinage profits	1,849.58	177.52	115.75		2,142.85
Other wastage and loss on sweeps, from contingent appropriation	2,815.07	3,264.91	3,110.75	6,073.58	15,264.31
Total reimbursements	4,664.65	3,442.43	3,226.50	6,073.58	17,407.16

ENGRAVING DEPARTMENT

During the fiscal year ended June 30, 1926, the engraving department made 3,417 working dies for domestic coinage, including those for the memorial coinage in celebration of the Sesquicentennial of American Independence, the Fort Vancouver Centennial, and California's Diamond Jubilee. Master dies, hubs, and working dies were made for Philippine, Polish, Venezuelan, Guatemalan, Costa Rican, Peruvian, and Salvadorean coinage.

LABORATORY, BUREAU OF THE MINT

From the domestic coinage of the calendar year 1925 the assayer of this bureau tested 426 gold coins and 464 silver coins, all of which were found within the legal requirements as to weight and fineness.

The greatest deviation in fineness of gold coins from standard (the limit of tolerance being 1 one-thousandth above or below) was 0.1 one-thousandth above and 0.4 one-thousandth below.

The greatest deviation in fineness of silver coins above standard (the limit of tolerance being 3 one-thousandths above or below) was 1.1 one-thousandths, while the greatest deviation below was 1.8 one-thousandths.

The following table summarizes results of fineness tests on domestic coin:

Fineness (thousandths)	Number of gold coins				Number of silver coins			
	Phila- delphia	San Fran- cisco	Denver	Total	Phila- delphia	San Fran- cisco	Denver	Total

ASSAY COMMISSION'S ANNUAL TEST OF COIN

Section 3547 of the Revised Statutes provides for an annual test of the domestic coinage executed during the prior year, by a commission, of whom part are ex officio members, the others being appointed, without compensation, by the President. The purpose is "to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight." The commission, which met at the Philadelphia Mint February 10 and 11, 1926, reported the following results of their examination:

Your committee on counting reports that the packages containing the pieces reserved by the several mints for the trial of coins, in accordance with section 3539 of the Revised Statutes, were delivered to us by the superintendent of the mint at Philadelphia, and upon comparison with the transcripts kept by the Director of the Mint were found to be correct.

Several packages were selected from the deliveries of each month from each mint of all denominations coined, and the coins contained therein were counted and found to agree with the number called for in each package.

The reserved coins were then delivered to the committees on weighing and assaying. In the reports of those committees will be found an account of the disposition of these coins.

The committee on weighing have to report that they have weighed the coins shown in the appended list and have found them to be standard within the legal tolerances. The coins were selected at random from those reserved by the mints at Philadelphia, San Francisco, and Denver.

The coins were directly weighed against a set of sealed coin weights which were accompanied by a certificate signed by the Director of the Bureau of Standards, Department of Commerce, and which gave the value of the weights in terms of United States standard. The weighings were made on a Troemner balance supplied by the Philadelphia Mint, and was tested by your committee as to the equality of the arms and as to its sensibility, which were entirely satisfactory.

Making a comparison with the standard Troy pound weight as against 10 ounces + 2 ounces, we found the agreement to be within 0.00005 ounce.

The committee on assaying has completed the duties assigned to it in connection with the assaying of coins selected from the different reserve samples representing deliveries of all denominations of gold and silver coined during the calendar year 1925 by the mints at Philadelphia, San Francisco, and Denver.

The coinage law provides for legal variations of 1 one-thousandth above or below standard fineness (900) on gold coin and 3 one-thousandths on silver coin.

We therefore take pleasure in reporting that the coinage for 1925 has been safely within the legal limits, as shown by the following schedules:

Assays of individual gold coins selected

Mint	Highest assay	Lowest assay
	<i>Fineness</i>	<i>Fineness</i>
Philadelphia.....	900.0	899.6
San Francisco.....	900.3	899.3

San Francisco.....	900.0	899.5
Denver.....	899.5	899.8

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1926, is respectfully submitted.

R. J. GRANT,
Director of the Mint.

HON. ANDREW W. MELLON,
Secretary of the Treasury.

PART II

REPORT OF THE DIRECTOR OF THE MINT ON
THE PRODUCTION AND CONSUMPTION OF GOLD
AND SILVER IN THE UNITED STATES DURING
THE CALENDAR YEAR 1925

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1925

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1925 is estimated to have been \$49,860,200, and the production of silver is estimated at 66,155,424 fine ounces. A comparison of these figures with those for 1924 indicates approximately \$2,400,000 decrease in production of gold and approximately 750,000 ounces increase in silver production.

As regards individual States, the only outstanding difference in gold production as compared with the prior year is Colorado's decrease of about \$1,300,000.

Individual States' differences in silver production as compared with the prior year include Utah's increase of about 3,400,000 ounces, and the following material decreases: Montana about 1,100,000 ounces, and Nevada 2,500,000 ounces.

A brief review of mining conditions, for which acknowledgments are made to the United States Bureau of Mines, follows; further information concerning same can be obtained by those interested by addressing the last-named bureau at Washington.

ALASKA

Alaska mines in 1925 produced gold valued at \$6,360,281, compared with an output of \$6,285,724 in 1924. The value of silver produced in Alaska in 1925 was \$482,495, or \$33,836 more than in 1924.

In 1925 about 49.3 per cent of the total gold production came from lode mines, compared with 43.3 per cent credited to lode mines in 1924 and 39.7 per cent in 1923.

The auriferous lode mines produced during the year gold valued at \$3,101,715, and silver valued at \$46,445. Twenty gold and silver lode mines and seven prospects were operated in Alaska in 1925. The lead mines produced gold valued at \$2,788 and silver valued at \$7,163. The copper ores contained \$32,778 in gold and \$412,131 in silver.

The value of the placer gold produced in Alaska in 1925 was \$3,223,000 compared with an output of \$3,564,000 in 1924. The silver recovered from placer mining operations in 1925 was valued at \$16,756. The production of placer gold from some of the more important districts was reduced as a result of negotiations and preparation for more active future work by some of the principal operators. As a result of economies and improvements in mining in these regions, it seems probable that the production of placer gold will be stabilized if not increased. It is estimated that about 508 placer mines were operated during the season of 1925.

Twenty-seven gold dredges were operated in Alaska in 1925, the same number as in 1924. The dredges in 1925 handled about 3,144,624 cubic yards of gravel and produced gold valued at \$1,572,312. The production is a slight increase over that of 1924, which was \$1,563,361. The total output of the dredges since this form of mining was introduced now amounts to \$29,859,474.

ARIZONA

Arizona mines produced gold in 1925 to a value of \$4,170,355, a decrease of \$708,110 from that of 1924, according to V. C. Heikes, of the Bureau of Mines. The larger part of the gold, or \$2,580,189, had its source in crude ore smelted. Gold in bullion from ore treated by amalgamation or cyanidation, which continued to decrease decidedly, was valued at \$606,755; and gold in concentrates was valued at \$945,582. The gold from deep mines was derived from the following sources: Dry or siliceous ore, \$764,111; copper ore, \$3,170,016; lead ore, \$161,402; copper-lead ore, \$67,483; lead-zinc ore, \$3,055; and zinc ore, \$21. Gold from siliceous ore was much decreased on account of the curtailment at Oatman in Mohave County. More than 76 per cent of the State's gold came from copper ore, while placers produced only \$4,267 in gold.

The silver output amounted to 7,257,868 ounces, an increase of 608,592 ounces from the output of 1924. Silver from copper ore continued to increase but that from siliceous ore materially decreased. The sources of the silver output were: Siliceous ore, 505,727 ounces; copper ore, 5,795,173 ounces; lead ore, 803,153 ounces; copper-lead ore, 144,567 ounces; lead-zinc ore, 7,835 ounces; zinc ore, 1,389 ounces, and placers, 24 ounces.

There were 386 mines producing during the year, of which number only 18 were placer mines.

CALIFORNIA

California mines in 1925, according to James M. Hill of the United States Bureau of Mines, produced \$13,065,330 in gold, of which placer mines produced \$5,096,144 and deep mines \$7,969,186. The production from placer mines increased 11 per cent, that from deep mines decreased 7 per cent, and the total gold yield was 0.65 per cent less than in 1924. Gold dredges in 1925 produced \$4,750,842 in gold or 93 per cent of the gold produced by placer mines. Dry gold ores gave 56.86 per cent of the total gold yield of the State and 93 per cent of the yield of gold from ores. Silver ore carried 1.12 per cent, copper ores 2.62 per cent, lead ore 0.36 per cent, and zinc ore 0.03 per cent of the total gold yield of the State.

There were 3,054,416 ounces of silver, valued at \$2,119,765, produced in California in 1925, a decrease of 14 per cent in quantity and 11 per cent in value as compared with 1924. The yield of silver from placer mines was 18,579 ounces or 0.61 per cent of the total silver yield of the State. Dry silver ore, largely from the California Rand Silver (Inc.), carried 65.25 per cent, copper ore 23.06 per cent, lead ore 5.71 per cent, dry gold ore 3.42 per cent, zinc ore 1.10 per cent, and lead-zinc ore 0.85 per cent of the total silver production of California in 1925.

In 1925 there were 359 placer mines, including 24 dredges, and 332 deep mines, at which production was made.

COLORADO

The reports from the mines of Colorado, according to Charles W. Henderson, Bureau of Mines, Department of Commerce, show production for the calendar year 1925 of 348,542 fine ounces of gold, valued at \$7,205,000, and 4,380,000 ounces of silver, which, at \$0.694 per ounce, have a gross value of \$3,039,720. These figures show a decrease of \$1,388,000 for gold, but an increase for silver of 1,125,630 ounces in quantity and of \$859,300 in value. The gold decrease is attributed to decreases of \$319,000 in Teller County (Cripple Creek), \$534,400 in Lake County (Leadville), \$255,300 in San Miguel County (Telluride and Ophir), and \$91,000 in San Juan County (Silverton and Eureka).

The counties showing increased silver output were: San Miguel, 50,200 ounces; San Juan, 97,900 ounces; Lake, 355,900 ounces; Clear Creek, 115,000 ounces; Mineral, 501,800 ounces; and Pitkin, 224,200 ounces. The counties with decreased silver output were: Eagle, 150,900 ounces; Gunnison, 23,800 ounces; and Ouray, 126,500 ounces.

The four dredges in the State, two at Breckenridge, one at Fairplay, and one at Box Creek, below Malta, produced \$140,395 in gold and 1,798 ounces of silver. Dredges, hydraulic, and sluice mines in the State produced \$148,313 in gold and 1,885 ounces of silver, a large decrease when compared with 1924 output, due to the short period of operation of all dredges.

CENTRAL STATES

Four Central States had an output of silver in 1925—Arkansas, Illinois, Michigan, and Missouri. The total production was 228,957 fine ounces, valued at \$158,896, against 242,966 ounces in 1924. All the silver from Michigan was obtained from lode-copper mines, mainly recovered in electrolytic refining. The output, 139,499 ounces, was 9,118 ounces more than in 1924. The output of silver from Missouri in 1925, 83,340 fine ounces, was, with the exception of 8 ounces contained in a shipment of copper ore, derived from the treatment of lead skimmings from lead ores mined in southeastern Missouri. The 1925 Missouri production of silver was 20,354 ounces less than in 1924. From lead concentrates derived from southern Illinois fluorspar mines, 3,000 fine ounces of silver was recovered, a decrease of 5,891 ounces caused by the smaller quantity of fluorspar mined in 1925.

The production of silver in Arkansas in 1925 was entirely from a few cars of lead concentrates and of zinc concentrates shipped from the Kellogg mine in Pike County. The output was 3,118 ounces. The mine was reported abandoned in 1925.

EASTERN OR APPALACHIAN STATES

The mine production of gold in the Eastern or Appalachian States increased from 799.88 fine ounces, valued at \$16,535, in 1924, to 1,964.60 fine ounces, valued at \$40,612, in 1925. North Carolina produced \$18,540, Georgia \$9,683, Tennessee \$7,421, Pennsylvania \$4,900, Virginia \$68. The production from placer mines was only 11.90 ounces or 2.56 ounces more than in 1924, and it was all from small operations in Georgia and North Carolina. The gold obtained from siliceous ore, which yielded only 247.58 ounces in 1924, increased to 1,356.57 ounces in 1925. The Rich Cog mine in Montgomery County, N. C., was much the largest producer, and most of the other gold from siliceous ores was produced by the Pine Mountain mine in Douglas County, Ga., and the Columbia mine in McDuffie County, Ga. Tennessee produced 358.99 fine ounces of gold from copper ores of the Ducktown district, and 237.04 ounces was recovered from pyritiferous magnetite ore in Pennsylvania.

The mine output of silver was 106,228 ounces, an increase of 9,600 over the output of 1924. Of this production 102,949 ounces was from copper ores mined in Tennessee, 3,120 ounces from copper concentrates derived from pyritiferous magnetite ore of Pennsylvania, and 159 ounces from the bullion recovered from siliceous ores mined in Georgia, North Carolina, and Virginia.

IDAHO

In 1925, according to C. N. Gerry, of the Bureau of Mines, Idaho's output of gold was valued at \$431,771 and that of silver \$5,373,947. The production of silver was close to that of 1924, as the large silver-lead mines were vigorously operated, but the production of gold decreased considerably.

Gold decreased from \$556,523 in 1924 to \$431,771 in 1925, as a result of curtailed operations of both placers and deep mines, especially in Boise, Elmore, and Shoshone Counties. Of this total the placer gold amounted to \$262,386 against \$358,121 in 1924; the gold won by dredges was valued at \$229,489, a decrease from \$340,462 in 1924. Dry or siliceous ore produced more gold than any other kind of ore, or \$83,815; gold in copper ore was valued at \$57,575; lead ore, \$21,677; copper-lead ore, \$544; lead-zinc ore, \$5,732; and zinc ore, \$42. In 1925, more than 80 per cent of Idaho's gold came from placers and from siliceous ore.

The silver output was 7,743,439 ounces, a decrease of 49,715 ounces. Most of the silver, or 4,791,497 ounces, came from lead ore. Lead-zinc ore supplied 1,877,329 ounces; copper-lead ore, 230,584 ounces; siliceous ore, 124,911 ounces; copper ore, 711,874 ounces; zinc ore, 4,432 ounces; and placers, 2,812 ounces. The Coeur d'Alene region alone produced 6,701,747 ounces of silver.

There were 274 mines producing during the year, of which 84 were placer mines and 190 deep mines.

MONTANA

Montana's mine output of gold in 1925, according to C. N. Gerry, of the Bureau of Mines, was valued at \$1,697,630, a decrease of \$325,195. Of this total \$1,658,245 came from deep mines and \$39,385 from placers. There was a marked decrease in gold from deep mines, due in part to the depletion of several old producers in Lewis and Clark County. No dredges were operated and the placer output was small when compared with past years. As formerly, the gold was derived principally from siliceous ore, which was the source of \$787,213. Gold from other sources was as follows: Copper ore, \$668,788; lead-zinc ore, \$105,640; lead ore, \$49,484; copper-lead ore, \$43,690; and zinc ore, \$3,430. About 70 per cent of the gold was produced by the Anaconda, Jardine, Jib, and St. Louis companies.

The output of silver decreased slightly from 13,289,303 ounces in 1924 to 13,158,191 ounces in 1925, of which more than 87 per cent was recovered from the mines at Butte. Silver from copper ore and lead ore increased considerably, but that from siliceous ore and lead-zinc ore was less than in 1924. Copper ore supplied the largest quantity of silver, 8,656,401 ounces; lead-zinc ore, 2,688,845 ounces; siliceous ore, 591,369 ounces; lead ore, 532,219 ounces; copper-lead ore, 555,365 ounces; and zinc ore, 133,587 ounces. Nearly 75 per cent of the silver was produced by the Anaconda, Butte & Superior, Elm Orlu, and Silver Dyke companies.

There were 422 producing mines, of which 329 were deep mines and 93 were placer properties.

NEVADA

The gold output of Nevada in 1925, according to V. C. Heikes, of the Bureau of Mines, had a value of \$3,867,798 as compared with \$4,505,686¹ in 1924. The production of gold from the Tonopah district was \$683,623, a marked decrease from that of 1924, but the Comstock district produced \$1,196,946 in gold, a fair increase. The largest producers of gold were the Comstock Merger, Nevada Consolidated, and Elkorro properties. Most of the gold, \$2,912,212, came from siliceous ore. Copper ore supplied gold valued at \$734,177; placers, \$52,435; lead ore, \$142,279; lead-zinc ore, \$26,159; zinc ore, \$435; and copper-lead ore, \$101.

The production of silver was 7,096,618 ounces, a large decrease from 9,411,379 ounces in 1924. The mines of the Tonopah district in Nye and Esmeralda Counties produced 3,070,409 ounces, which is a large decrease but more than the production of any other district in the State. Though some ore was mined in the western part of the district in Esmeralda County, production was nearly 39 per cent less than in 1924. Comstock district, Storey County, decreased its output from 1,616,692 ounces to 1,350,156 ounces of silver, largely from the United Comstock property. Most of the silver of the State, 5,261,402 ounces, has its source in siliceous ore, the greater part of which was cyanided. Silver from lead ore amounted to 1,361,753 ounces; lead-zinc ore, 335,338 ounces; zinc ore, 8,104

¹ In last year's volume, p. 29, the gold output of Nevada in 1924 should have read \$4,505,686 (instead of \$22,799,799), as compared with \$4,223,109 (instead of \$25,040,349) in 1923.

ounces; copper ore, 125,477 ounces; copper-lead ore, 3,259 ounces; and placers, 1,285 ounces. The largest producers of silver were the Tonopah Extension, Comstock Merger, and Tonopah Belmont mines.

There were 424 mines producing in Nevada in 1925, of which 25 were placer mines and 399 were deep mines.

NEW MEXICO

According to Charles W. Henderson, Bureau of Mines, New Mexico in 1925 produced 26,561.40 fine ounces of gold, valued at \$549,073 and 735,124 ounces of silver valued at \$510,176. The quantity of gold increased 1,759.84 ounces and the silver decreased 59,946 ounces.

Dry and siliceous ores yielded about 40 per cent of the gold and 65 per cent of the silver. The gold recovered in copper ores was 15,636 ounces, that for dry and siliceous ores 10,598, but other classes of ores yielded very little gold. Silver recovered from dry and siliceous ores was 476,904 ounces; from copper ores 163,561 ounces, and from lead ores 84,976 ounces. Mines in the Mogollon district, in Catron County, yielded \$67,638 less gold and 168,395 fine ounces of silver less than in 1924. Increased quantities of gold and silver were derived from copper ores, but as the Mogollon mines ceased operations in December, 1925, the gold and silver production of New Mexico will likely decrease in 1926.

Bullion recovered by amalgamation yielded 2,600 ounces of gold and 457 ounces of silver. Ore treated by cyanidation yielded 7,833 ounces of gold and 438,732 ounces of silver.

The output of the placer mines in 1925 was 97.62 ounces of gold and 13 ounces of silver.

OREGON

Oregon mines in 1925, according to James M. Hill, of the United States Bureau of Mines, produced \$392,409 in gold, of which \$205,590 was produced at deep mines and \$186,819 at placer mines. Deep mines produced \$20,670 less, placer mines \$138,763 less, and the total gold production was \$159,433 less than in 1924. Dry gold ore carried 50 per cent, copper ore 2 per cent, and placers yielded 48 per cent of the gold produced in Oregon.

There were 32,793 ounces of silver produced in Oregon in 1925, valued at \$22,758, a decrease of 5,310 ounces in quantity and \$2,771 in value as compared with 1924. Deep mines produced 31,662 ounces, valued at \$21,973, a decrease of 4,162 ounces in quantity and \$2,029 in value as compared with the previous year. Placer mines produced 1,131 ounces of silver, valued at \$785, a decrease of 1,148 ounces in quantity and \$742 in value as compared with 1924. Dry gold ore carried 62 per cent, silver ore 29 per cent, copper ore 6 per cent, and placers produced 3 per cent of the total silver yield of the State.

The production came from 53 deep mines and 94 placer mines in 1925.

SOUTH DAKOTA

According to Charles W. Henderson, United States Bureau of Mines, Department of Commerce, the only producing mines in South Dakota in 1925 were the Homestake, at Lead, Lawrence County,

which was much the largest producer of gold in the United States, the Cutting mine, also in Lawrence County, which was operated during the first half of 1925, and the Doctor Lode No. 2 mine, in Pennington County.

The reports of these mines show a total production in 1925 of 289,747.10 fine ounces of gold, valued at \$5,989,604, and 96,133 ounces of silver, valued at \$66,716.

The annual report of the Homestake Mining Co. for 1925 shows that 1,589,701 tons of siliceous ore was milled with a revenue from the gold and silver bars shipped of \$5,999,073.56, an average of \$3.77371 per ton.

TEXAS

According to Charles W. Henderson, of the United States Bureau of Mines, only one mine in Texas, the Presidio mine, at Shafter, yielded any silver in 1925.²

This mine has produced much the greater part of the silver output of Texas, which from 1885 to 1925 amounted to 18,540,043 ounces, having a commercial value of \$13,618,558.

UTAH

The value of the metal output of Utah was \$82,701,394 in 1925, despite a small decrease in copper, according to V. C. Heikes, of the Bureau of Mines. The metal mines of the State made a record output of silver and lead in 1925, and an increased output of gold and zinc as a result of a marked improvement in metallurgical practice and an increase in the price of copper, lead, and zinc.

The gold output was valued at \$3,675,516, an increase of \$647,364 from that of 1924. Separated as to source, copper ore was most important, containing gold valued at \$1,801,928; siliceous ore supplied \$708,419 in gold; lead ore, \$558,193; lead-zinc ore, \$606,870; and copper-lead ore, with copper-lead-zinc ore, \$106. No placer gold was produced in 1925.

The silver production of Utah increased from 17,253,692 ounces in 1924 to a record output of 21,276,689 ounces in 1925. Separated as to source, the silver came principally from lead ore, which supplied 10,318,309 ounces; dry or siliceous ore supplied 4,434,524 ounces; copper ore, 959,790 ounces; lead-zinc ore, 5,560,054 ounces; and copper-lead ore with copper-lead-zinc ore, 4,012 ounces. The Tintic district, in Juab and Utah Counties, produced 9,499,425 ounces against 8,254,517 ounces in 1924. The Bingham district of Salt Lake County produced 3,433,478 ounces, and the Park City region, in Summit and Wasatch Counties, 7,236,652 ounces.

There were 179 producing properties in 1925, all of which were deep mines.

WASHINGTON

The output of gold in Washington in 1925, according to C. N. Gerry, of the Bureau of Mines, had a value of \$230,253, a decrease of \$79,364 from the production of 1924. Most of the gold of the State, or \$224,831, came from siliceous ore; copper ore supplied only \$2,890 in gold; lead ore, \$1,187; zinc ore and lead-zinc ore, \$252; and placers, \$1,093. Crude ore supplied \$135,290 in gold, and concentrates, \$3,047. Since 1860 Washington has produced \$29,324,460 in gold.

² Approximately 552,000 ounces, valued at \$383,000.

The output of silver in 1925 was 166,425 ounces, a decrease of 47,317 ounces. Of the total silver, 43,083 ounces had its source in siliceous ore, 37,131 ounces in copper ore, 77,618 ounces in lead ore, 7,880 ounces in lead-zinc ore, and 702 ounces in zinc ore. Crude ore supplied most of the silver, or 136,335 ounces, concentrates 29,835 ounces, and bullion only 244 ounces.

There were 9 placers and 37 deep producing mines.

WYOMING

There were no producing mines in Wyoming in 1925, though a few ounces of gold were sold, the origin of which is unknown.

Refinery production of gold mined in the several States and Territories in 1924 and 1925, with the increase and decrease in each for the latter year

¹ Includes small quantity of silver from placer mines.

² Includes silver in lead, silver-lead, lead-zinc, copper-lead, copper-lead-zinc, and zinc ores.

³ Estimated.

⁴ Philippine Islands excluded.

PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES SINCE 1792

The refinery production of gold and silver from the mines of the United States since 1792 is shown in the following table.

The commercial value of the silver product is reckoned at the average yearly market price of silver on the New York market.

Production of gold and silver in the United States from 1792 to 1844 and annually since

[The estimate for 1792-1873 is by R. W. Raymond, commissioner of mining statistics, and since by Director of the Mint]

Calendar years	Gold		Silver	
	Fine ounces	Value	Fine ounces	Commercial value
1792 to July 31, 1834	677,250	\$14,000,000	Insignificant.

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1925

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the United States assay office at New York and the mint at Philadelphia hold the foremost places; consequently the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1925, with the classes of material from which they were made.

Gold and silver issued for use in the industrial arts during the year ended December 31, 1925

¹ Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agencies of the Federal Reserve banks. Does not include silver bullion (a potential monetary asset) to the value of \$8,438,125, nor nickel and bronze coin, the value of which depends almost exclusively on the Government impression rather than intrinsic metallic value or a specific reserve.

² Includes money held by the Cuban agencies of the Federal Reserve banks of Boston and Atlanta.

³ Population of continental United States (estimated) June 30, 1926, 115,523,000; June 30, 1925, 114,104,000; Nov. 1, 1920, 107,491,000; July 1, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

⁴ Does not include gold bullion or foreign coin outside of vaults of the Treasury, Federal Reserve banks, and Federal Reserve agents.

⁵ These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

⁶ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

⁷ This total includes \$18,406,917 of notes in process of redemption, \$131,662,551 of gold deposited for redemption of Federal reserve notes, \$8,603,429 deposited for redemption of national bank notes, \$4,965 deposited for retirement of additional circulation (act of May 30, 1908), and \$8,601,490 deposited as a reserve against postal savings deposits.

NOTE.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$104,188,886 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury. Federal reserve notes are obligations of the United States and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act. Federal reserve banks must maintain a gold reserve of at least 40 per cent of gold and the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful money has been deposited with the Treasurer of the United States for retirement of all outstanding Federal reserve bank notes. National bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national bank notes secured by Government bonds.

Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year since 1873

Fiscal year ended June 30—	Population	Total stock of coin and bullion		Per capita		
		Gold	Silver	Gold	Silver	Total metallic

CASH HOLDINGS OF NATIONAL BANKS

Reports to the Comptroller of the Currency of cash holdings on June 30, 1926, of the national banks (7,978) give:

Gold coin.....	\$17, 869, 000
Standard silver dollars.....	7, 129, 000
Subsidiary silver and minor coin.....	29, 724, 000
Gold certificates.....	54, 155, 000
Silver certificates.....	30, 457, 000
United States notes.....	26, 740, 000
National-bank notes.....	67, 123, 000
Federal reserve and Federal reserve bank notes.....	126, 655, 000
Clearing-house certificates.....	99, 000
Total.....	359, 951, 000

CASH HOLDINGS OF NONNATIONAL BANKS

Reports to the Comptroller of the Currency of 20,769 reporting banks, other than national banks, as of June 30, 1925, show cash holdings as follows:

Gold coin.....	\$21, 757, 000
Silver coin.....	21, 333, 000
Paper currency.....	269, 920, 000
Nickels and cents.....	1, 965, 000
Not classified.....	276, 706, 000
Total.....	591, 681, 000

STOCK OF MONEY IN THE UNITED STATES DECEMBER 31, 1925

On December 31, 1925, the stock of domestic coin in the United States was \$1,994,544,298, as shown by the following table:

Stock of domestic coin in the United States December 31, 1925

Item	Gold	Silver	Total
Estimated stock of coin in United States Dec. 31, 1924.....	\$1, 139, 419, 752	\$794, 628, 136	\$1, 934, 047, 888

¹ Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agencies of the Federal reserve banks. Does not include silver bullion (a potential monetary asset) to the value of \$15,145,024, nor nickel and bronze coin, the value of which depends almost exclusively on the Government impression rather than intrinsic metallic value or a specific reserve.

² Includes money held by the Cuban agencies of the Federal reserve banks of Boston and Atlanta.

³ Population of continental United States (estimated) Dec. 31, 1925, 114,813,000; Dec. 31, 1924, 113,395,000; Nov. 1, 1920, 107,491,000; July 1, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

⁴ Does not include gold bullion or foreign coin outside of vaults of the Treasury. Federal reserve banks, and Federal reserve agents.

⁵ These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

⁶ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

⁷ This total includes \$16,194,749 of notes in process of redemption, \$162,502,913 of gold deposited for redemption of Federal reserve notes, \$13,026,127 deposited for redemption of national-bank notes, \$4,555 deposited for retirement of additional circulation (act of May 30, 1908), and \$6,576,290 deposited as a reserve against postal-savings deposits.

Note.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by the gold reserve of \$153,620,986 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible under the terms of the Federal reserve act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold-redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful money has been deposited with the Treasurer of the United States for retirement of all outstanding Federal reserve bank notes. National bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national-bank notes secured by Government bonds.

NOTE.—The quantities in the column "Net imports" for both gold and silver for the years 1873-74 to 1886-87 are estimated only, deduced from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

THE COURSE OF GOLD AND SILVER

The following review of the London market during the calendar year 1925 is from the annual circular issued by Messrs. Sharps & Wilkins, bullion brokers, of London, England:

GOLD

In our review of the bullion market for the past year, we propose to deal first with the position of gold, which has presented far more points of interest than silver, the most important being the decision to return to a gold standard in this country.

The continuation, during the early part of this year, of the gradual improvement in the sterling rate in New York toward the par level of \$4.86 $\frac{2}{3}$ which was witnessed in 1924, introduced the question as to the possibility of a return to the pre-war conditions at an early date by reestablishing the gold standard, which had been temporarily suspended owing to the Great War. The advisability of such a change was freely discussed in financial circles both in this country and also abroad; the importance being specially realized in America. While for some time past it had been generally accepted that a gold market in London should be created at the earliest opportunity consistent with trade and financial conditions, it was doubted in some quarters whether the improvement shown in these conditions was sufficiently established not only to justify but also to maintain effectively a return to a gold standard. In the event of any serious industrial unrest, with its accompaniment of strikes and a reduction in our capacity to export, the foreign exchanges would tend to move against this country, and the point might quite conceivably be reached where, with a free gold market in London, heavy withdrawals of the metal would take place, causing a serious financial situation. On the other hand if it were possible to establish and effectively maintain a gold standard there would undoubtedly be a tendency for prices to become stabilized, which would not only assist trade in general but would lessen the possibility of industrial troubles and thereby place this country in a stronger position to hold its own against foreign competition in the world's markets.

It was also expected that the improvement in our financial state, which would enable the working of a gold standard, would tend in time to release some of the vast quantities of gold accumulated by America, which had more than trebled the pre-war reserves in the 10 years from 1914 to 1924, enabling it to serve its more useful purpose as a basis of credit in other countries. The holding of large quantities of gold in excess of the actual requirements in any one country not only renders this surplus useless but it may prove a distinct disadvantage to the country concerned, owing to the danger of causing currency inflation by abnormally increasing the issue of notes.

It was decided that this country should return to a gold standard as from April 28, 1925, and the lead thus given by the mother country was immediately followed by Australia and New Zealand, and a similar financial condition was adopted by South Africa and Rhodesia at a slightly later date. By an act passed in 1920, which was really a survival of D. O. R. A., and which expires at the end of 1925, no gold coin or bullion was permitted to be exported from the United Kingdom except under special license, which was only granted in the case of gold received in London from South and West Africa. It was decided to continue nominally the provisions of this act until the date of expiration, but at the same time to grant a form of general license to the Bank of England permitting the export of gold coin and bullion.

Under the new conditions the Bank of England is compelled to sell gold bullion in amounts of not less than 400 ounces at the fixed rate of 77s. 10 $\frac{1}{2}$ d. per ounce standard against payment in legal tender. The practice of quoting gold in the London bullion market on the basis of "per ounce fine" has been maintained, and the rate corresponding to the Bank of England selling price is 84s. 11 $\frac{1}{2}$ d. per ounce fine.

With regard to gold coin, it was decided that sovereigns should be issued at par for export only, and not for domestic use. There appears to be a growing tendency on the part of nations to abolish as far as possible the wasteful and expensive practice of issuing gold coins for circulation, and instead to centralize and conserve their gold against the issue of notes. In order to insure that all

sovereigns purchased from the Bank of England in exchange for legal tender should be utilized for export only, the bank insisted upon undertaking the packing themselves and also the handling over of the boxes to the shipping companies direct.

With a return to a gold standard, the daily Bank of England gold bulletins were resumed, showing the extent of the gold movements in and out.

As has already been pointed out, one of the chief points of interest connected with the return to a free gold market was the effect likely to be produced upon the reserves of gold.

With the exception of the first two weeks in May, during which about £2,000,000 gold was sold on balance by the Bank of England, the movements were in favor of this country, until by the beginning of August the reserves showed a net gain of approximately £8,500,000. Important purchases of sovereigns were reported from Holland and South Africa, and bullion was also received from Russia. From this time onward to the end of the year the position became reversed and by the middle of October the balance of gold previously acquired had entirely disappeared and the end of the year showed that the original reserves had been depleted to the extent of about £11,500,000 since the return to a free gold market.

In early October the sterling rate in New York fell below the gold point of 484.32 (interest being calculated at 5 per cent) with the result that shipments of gold began to be made to that quarter, which continued until the beginning of December, when an improvement in sterling rendered these shipments of bullion no longer profitable. During this period approximately £10,000,000 was shipped to New York, the largest amount of gold sold by the Bank of England on any one day being £1,961,000 reported on October 16.

The reserves were further drawn upon by heavy shipments to the Continent, chiefly for Holland, during the last two and one-half months of the year. The recent bulletins have shown, however, that there is a distinct reduction in the amounts sold by the bank for export.

It is now necessary to review the position of gold in the open market. At the commencement of the year the price was quoted at 87s. 4d. per ounce fine, and movements in the rate continued to be controlled by fluctuations in the sterling rate until the return to a gold standard on the 28th of April fixed a maximum price of 84s. 11½d. per ounce fine. Since that date the quotation has varied between that and 84s. 10½d. according to the supply and demand, on a fine basis, the Bank of England buying price of 77s. 9d. per ounce standard being calculated at 84s. 10d.

During the first few months of the year very little gold was imported into London from South Africa, as the producers decided to retain their production for conversion into sovereigns at the Pretoria Mint, owing to the high premium ruling at that time on remittances from London. This decision caused a shortage of gold in the London market and the Indian demand had to be supplied by shipments of the metal from New York, both direct and via London, a total of \$58,700,000 being purchased and shipped. In addition to shipments of the usual mint bars, gold was also manufactured into bars of 50 ounces and dispatched by registered post, but this method was discontinued in early April, when a consignment of about £300,000 was stopped at Marseilles and returned to New York, owing to the shipping company refusing to accept it.

At the same time gold to an amount of approximately £4,250,000 was purchased in New York for shipment to London, in order to supply the Indian demand for special 10-ounce bars and for trade and other requirements.

The premium which existed upon remittances from London to South Africa applied also in the case of Australia, and large shipments of gold were consequently made from America to that country and in addition £933,000 of bullion was dispatched from Cape Town direct.

By May, owing to an improvement in the exchange position, shipments of gold were resumed from South Africa, large amounts being dispatched to India fortnightly from Durban direct. The continuation during this year of the large purchases of gold by India, which commenced in July, 1924, is attributed partly to the general prosperity of the country, but it is thought that the demand was further stimulated by the comparatively low price of the metal and by the idea of the possibility of an attempt being made to stabilize the rupee at a level below that ruling at the time.

Compared with 1924, the shipments of gold from South Africa to India direct show a reduction of about £2,000,000. Shipments of bar gold have amounted to approximately £11,500,000, as compared with £15,250,000, but sovereigns to the extent of about £1,800,000 have been purchased and shipped to India from Durban, which did not occur in the previous year.

Shipments of gold bullion from London to India are approximately the same as last year, but the amount of sovereigns exported shows a slight increase.

* * * * *

SILVER

In comparison with the previous year the silver market during 1925 has been extremely featureless and it is a matter of some difficulty to find any points of sufficient importance for special reference.

The year opened with the price at $31\frac{3}{4}$ d. per ounce standard, the closing quotation being $31\frac{1}{4}$ d. per ounce standard. The highest and lowest rates touched were $33\frac{7}{8}$ d. per ounce standard on the 5th of September and $31\frac{1}{8}$ d. per ounce standard on the 24th of April, respectively, giving a total range in price of only $2\frac{3}{4}$ d., as compared with $4\frac{1}{8}$ d. in 1924; in fact, it is necessary to go back to 1909 to find a smaller variation. The average price has worked out at $32\frac{1}{8}$ d. per ounce standard, as compared with 34d. in the previous year.

The difference between the cash and forward quotations during the year has varied from one-eighth discount to three-eighths premium on the former and for long periods at a time even rates have ruled.

Reviewed from the standpoint of 1924, the principal difference has been the almost complete absence of the continental coinage orders for silver which played so important a part in last year, and were responsible for the utilization of about 60,000,000 ounces of silver. It is the lack of any such demand that has been chiefly responsible for the reduction in the average price and has left the market almost entirely influenced by the movements in the China exchange. There has certainly been a good demand from India, especially during the early months of the year, but the China position has undoubtedly exercised the chief control and influenced the fluctuations which have taken place.

It was expected that further amounts of silver would be required by Germany, when the deliveries of the silver purchased during 1924 had been completed, which did not actually take place until June of the present year, and this belief was further strengthened by a report in January that the issue of silver coins was to be increased from 5 to 10 marks per head of the population, and although coinage has continued, no further important amounts of silver have been purchased.

Russia did actually return to the London market as a buyer of silver in April, but these orders were discontinued and the silver purchased was resold, the Soviet Government turning its attention to the more pressing question of financing purchases of such commodities as wheat and tea.

* * * * *

From the returns available for the 11 months up to the end of November, it will be seen that 66,971,995 ounces of refined silver have been exported, as compared with imports amounting to 50,195,309 ounces. Taking into consideration the receipts of 6,748,397 ounces of unrefined silver, this is still an increase of exports over imports of approximately 10,000,000 ounces. The explanation for this outstanding balance is mainly due to the receipt of £1,431,743 of coin, not of legal tender, in the United Kingdom, which has been remelted and refined in this country and reexported in the form of refined bullion. On the other hand, £1,584,843 of coin not of legal tender is shown in the returns as having been exported, a good portion of which has been manufactured by the mint for other countries from the silver derived from the debasing of our own silver coinage.

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, and since from daily London quotations.

RATIO OF SILVER TO GOLD, AS AFFECTED BY WORLD WAR

During the period December, 1916, to June, 1920, it is probable that the world's basic silver price was that of New York rather than that of London. The normal relationship between the two prices—New York a fraction of a cent below the London quotation with exchange considered—did not prevail during this period, when the average monthly New York price varied between approximately 3 cents above and 6 cents below the London price. This period appears to have been initiated by enormous coinages to meet war-time needs, and large silver shipments from the United States to the Orient. Its close was coincident with the removal of the product of United States mines from the world market, purchases under the Pittman Act of April 23, 1918, having begun in June, 1920.

The ratio of silver to gold, based on the New York price, was for this period: Calendar year 1917, 24.85; 1918, 21; 1919, 18.44; 1920, 20.27.

With the partial release during the first half of 1919 of British governmental control of gold export, the London price of exportable gold advanced above its monetary par. The ratio of silver to this

gold, based on the average London price of both metals, follows: 1919, 17.53; 1920, 20.41; 1921, 32.34; 1922, 30.11; 1923, 31.35; 1924, 30.62.

Final release of British governmental control of gold export became effective April 28, 1925, when the Chancellor of the Exchequer of Great Britain announced that the restrictions authorized by the gold and silver (export control) act of 1920 on export of gold would be discontinued from that date. This had the effect of restoring the gold standard to the United Kingdom. The example of Great Britain was followed by Australia, New Zealand, Netherlands, and the Dutch East Indies, and on June 1 by South Africa. On April 29, 1925, the London quotation on gold dropped more than 1 shilling to 84s. 11d. per fine ounce, as compared with 84s. 11.45d., mint par. Thereafter the quotation fluctuated between 84s. 10½d. and 84s. 11½d. until January 29, 1926, when it touched 84s. 9¾d.; it has since varied between the latter figure and 84s. 11½d.

Bullion value of the silver dollar [371¼ grains of pure silver] at the annual average price of silver each calendar year since 1837

VALUES OF FOREIGN COINS, OCTOBER 1, 1926

In pursuance of the provisions of section 25, of the act of August 27, 1894, as amended by section 403, Title IV, of the act of May 27, 1921, and reenacted by section 522, Title IV, act of September 21, 1922, I hereby proclaim the following estimate by the Director of the Mint of the values of pure metal contents of foreign coins to be the values of such coins in terms of the money of account of the United States, to be followed in estimating the value of all foreign merchandise exported to the United States during the quarter beginning October 1, 1926, expressed in any such metallic currencies: *Provided, however,* That if no such value has been proclaimed, or if the value so proclaimed varies by 5 per cent or more from a value measured by the buying rate in the New York market at noon on the day of exportation, conversion shall be made at a value measured by such buying rate, as determined by the Federal Reserve Bank of New York and published by me as certified by said bank pursuant to the provisions of said section 25 as amended.

A. W. MELLON,
Secretary of the Treasury.

Values of foreign coins

Country	Legal standard	Monetary unit	Value in terms of United States money	Remarks
Argentine Republic.	Gold	Peso	\$0.9648	Currency: Paper, normally convertible at 44 per cent of face value; now inconvertible.
Austria	Gold	Schilling	.1407	
Belgium	Gold and silver.	Franc	.1930	Member Latin Union.
Bolivia	Gold	Boliviano	.3803	12½ bolivianos equal 1 pound sterling.
Brazil	Gold	Milreis	.5462	Currency: Government paper a part of which is legally convertible at 16 pence (= \$0.3244) per milreis; now inconvertible.
British Colonies in Australasia and Africa.	Gold	Pound sterling	4.8665	
British Honduras.	Gold	Dollar	1.0000	
Bulgaria	Gold	Lev	.1930	
Canada	Gold	Dollar	1.0000	
Chile	Gold	Peso	.1217	
China	Silver	Amoy	.7512	The tael is a unit of weight; not a coin. The customs unit is the Haikwan tael. The values of other taels are based on their relation to the value of the Haikwan tael.
		Canton	.7489	
		Chefoo	.7184	
		Chin Kiang	.7338	
		Fuchau	.6948	
		Haikwan	.7643	
		Kankow	.7028	
		Kiaochow	.7279	
		Nanking	.7433	
		Niuchwany	.7044	
		Ningpo	.7222	The Yuan silver dollar of 100 cents is the monetary unit of the Chinese Republic; it is equivalent to 0.644+ of the Haikwan tael.
		Peking	.7323	
		Shanghai	.6861	
		Swatow	.6939	
		Takau	.7559	
		Tientsin	.7279	
		Yuan	.4868	
		Hongkong	.4940	
		British	.4977	
		Mexican	.4977	
Colombia	Gold	Peso	.9733	Mexican silver pesos issued under Mexican decree of Nov. 13, 1918, are of silver content approximately 41% less than the dollar here quoted; and those issued under decree of Oct. 27, 1919, contain about 51% less silver.
Costa Rica	Gold	Colon	.4653	Currency: Government paper and silver. Law establishing conversion office fixes ratio 4 colons=\$1 U. S.
Cuba	Gold	Peso	1.0000	
Denmark	Gold	Krone	.2680	
Dominican Republic.	Gold	Dollar	1.0000	U. S. money is principal circulating medium.
Ecuador	Gold	Sucre	.4867	
Egypt	Gold	Pound (100 piasters)	4.9431	The actual standard is the British pound sterling, which is legal tender for 97½ piasters.
Estonia	Gold	Kroon	.2680	
Finland	Gold	Markka	.0252	
France	Gold and silver.	Franc	.1930	Member Latin Union.
Germany	Gold	Reichsmark	.2382	
Great Britain	Gold	Pound sterling	4.8665	
Greece	Gold and silver.	Drachma	.1930	Member Latin Union.
Guatemala	Gold	Quetzal	1.0000	
Haiti	Gold	Gourde	.2000	Currency: National bank notes redeemable on demand in American dollars.
Honduras	Silver	Peso	.4582	Currency, bank notes.
Hungary	Gold	Pengő	.1749	Not fully effective until January 1, 1927. The British sovereign and half sovereign are legal tender in India at 10 rupees per sovereign; actual exchange rates approximate 15 rupees.
India [British]	Gold	Sovereign	4.8665	
	Silver	Rupee	.2177	
Indo-China	Silver	Piaster	.4949	
Italy	Gold	Lira	.1930	Member Latin Union.
Japan	Gold	Yen	.4983	
Latvia	Gold	Lat	.1930	
Liberia	Gold	Dollar	1.0000	Currency: Depreciated silver token coins. Customs duties are collected in gold.
Lithuania	Gold	Litas	.1000	Currency: Notes of the bank of Lithuania, not now convertible.

Values of foreign coins—Continued

Country	Legal standard	Monetary unit	Value in terms of United States money	Remarks
Mexico	Gold	Peso	\$0.4985	
Netherlands	Gold	Guilder (florin)	.4020	
Newfoundland	Gold	Dollar	1.0000	
Nicaragua	Gold	Cordoba	1.0000	
Norway	Gold	Krone	.2680	
Panama	Gold	Balboa	1.0000	
Paraguay	Gold	Peso (Argentine)	.9648	Currency: Depreciated Paraguayan paper currency.
Persia	Silver	Kran	.0844	Currency: Silver circulating above its metallic value. Gold coin is a commodity only, normally worth double the silver.
Peru	Gold	Libra	4.8665	
Philippine Islands	Gold	Peso	.5000	
Poland	Gold	Zloty	.1930	
Portugal	Gold	Escudo	1.0805	Currency: Inconvertible paper.
Rumania	Gold	Len	.1930	
Russia	Gold	Ruble	.5146	Pre-war unit.
Salvador	Gold	Colon	.5000	
Siam	Gold	Tical	.3709	
Spain	Gold and silver	Peseta	.1930	Valuation is for gold peseta; currency is notes of the bank of Spain.
Straits Settlements	Gold	Dollar	.5678	
Sweden	Gold	Krona	.2680	
Switzerland	Gold	Franc	.1930	Member Latin Union.
Turkey	Gold	Piaster	.0440	(100 piasters equal to the Turkish £.)
Uruguay	Gold	Peso	1.0342	Currency: Inconvertible paper.
Venezuela	Gold	Bolivar	.1930	
Yugoslavia	Gold	Dinar	.1930	

Changes in value of foreign coins during 1926

MONETARY LEGISLATION

[PUBLIC—No. 235—69TH CONGRESS]

[H. R. 8306]

AN ACT To authorize the coinage of 50-cent pieces in commemoration of the heroism of the fathers and mothers who traversed the Oregon Trail to the Far West with great hardship, daring, and loss of life, which not only resulted in adding new States to the Union but earned a well-deserved and imperishable fame for the pioneers; to honor the twenty thousand dead that lie buried in unknown graves along two thousand miles of that great highway of history; to rescue the various important points along the old trail from oblivion; and to commemorate by suitable monuments, memorial or otherwise, the tragic events associated with that emigration—erecting them either along the trail itself or elsewhere, in localities appropriate for the purpose, including the city of Washington.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in commemoration of the Oregon Trail and in memory of the pioneers of the far West there shall be coined at the mints of the United States silver 50-cent pieces to the number of not more than six million; such 50-cent pieces to be of the standard Troy weight, composition, diameter, device, and design as shall be fixed by the Director of the Mint, with the approval of the Secretary of the Treasury, which said 50-cent pieces shall be legal tender in any payment to the amount of their face value.

SEC. 2. That the coins herein authorized shall be issued only upon the request of the executive committee of the Oregon Trail Memorial Association, Incorporated, a corporation organized under the laws of the State of New York; and upon payment by such executive committee, for and on behalf of the Oregon Trail Memorial Association, Incorporated, of the par value of such coins, it shall be permissible for the said Oregon Trail Memorial Association, Incorporated, to obtain such coins upon said payment, all at one time or at separate times, and in separate amounts, as it may determine.

SEC. 3. That all laws now in force relating to the subsidiary silver coins of the United States, and the coinage or striking of the same, regulating and guarding the process of coinage, providing for the purchase of material and for the transportation, distribution, and redemption of coins, for the prevention of debasement or counterfeiting, for security of the coin, or for any other purposes, whether said laws are penal or otherwise, shall, so far as applicable, apply to the coinage herein authorized: *Provided*, That the United States shall not be subject to the expense of making the necessary dies and other preparations for this coinage.

Approved, May 17, 1926.

FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production, import, export, and coinage of gold and silver, and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of interrogatories covering the points on which information is sought is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies, in the form of reports, are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission and the available data for the calendar year under review are usually incomplete.

In the absence of official returns from foreign countries the most reliable data available are used in compiling world statistics. Where data other than from the interrogatory replies are published the source of the information is stated. Conversions of foreign moneys or values into United States equivalents have been made at the legal par rates unless otherwise stated (in the text).

Revised world tables for 1924 and tables for 1925, subject to revision, are printed at the end of this volume. Detailed data, arranged by continents and countries, follow herewith; they form the basis of the tables.

NORTH AMERICA

CANADA

The amount of domestic silver coin withdrawn from monetary use for recoinage during 1925 was \$164,483.

The amount of gold and silver, in the form of jewelry, jeweler's and dental scrap, returned from the industrial arts to monetary use during 1925 was as follows: Gold, 8,218 fine ounces, valued at \$169,871; silver, 3,203 fine ounces, valued at \$2,918.

The production of gold and silver from the mines of the country during 1925 was as follows: Gold, 1,735,735 fine ounces, valued at \$35,880,826; silver, 20,228,988 fine ounces, valued at \$13,974,156.

LAWS AFFECTING THE CURRENCY

[Presidential decree of April 29, 1925]

ARTICLE 1. There is established a new denomination of silver of 10 centavos, "decimo."

This coin shall have the fineness of 0.720, determined by the law of October 27, 1919, and shall be considered solely as fractional of the gold denominations.

ART. 2. Its gross weight shall be 1.666 $\frac{2}{3}$ grams.

ART. 5. This coin shall be received by the State in unlimited quantities and on a par with the gold denominations.

ART. 6. The silver denominations of 1 peso, 50, 20, and 10 centavos established by the law of November 13, 1918, shall have legal status until December 31, 1925.

Equally the bronze denominations of 10 and 20 centavos, established, respectively, by the laws of October 27, 1919, and January 7, 1920, shall cease to be coined and shall have legal status until December 31, 1925.

BRITISH HONDURAS

CHILE

FIRST STATEMENT OF THE CENTRAL BANK OF CHILE

[From Commerce Reports, Mar. 15, 1926]

The first weekly statement of the Central Bank of Chile, published January 19, 1926, shows that it had placed in circulation 8,358,350 pesos of its own issue, while it is charged with the redemption of the 379,987,229 pesos of the Government issues which are still outstanding. There were, therefore, 388,345,579 paper pesos in circulation.

As a legal reserve to guarantee these notes the bank held 207,209,721 gold pesos (\$25,217,423), plus 207,669,476 gold pesos in sight deposits in foreign countries, a total of 414,879,197.

NEW MONETARY RÉGIME IN CHILE

[From Bulletin de Statistique, Paris, November, 1925]

A new monetary régime, the characteristics of which are transcribed below, was established on September 17:

I. GOLD COINS

ARTICLE 1. The monetary unit of Chile shall be the "peso," which shall contain 0.183057 gram of fine gold.

Ten of these units, which must contain a total of 1.83057 grams of fine gold, shall constitute the "condor."

ART. 2. The mint will coin gold coins of the denominations and weights authorized by this law from the gold bars presented, without any limitation as to quantity, as long as the quantity is not less than 500 grams and the fineness not less than 0.500. The expense of the gold coinage shall be borne by the Government; but the mint may recover the expense entailed by the assaying and refining of the bars intrusted to it for coinage. For this purpose the superintendent of the mint shall publish a table of charges approved by the President of the Republic.

ART. 3. The gold coins shall be 0.900 fine and have the following denominations and weights: 20 pesos, 4.067932 grams gross weight and 3.66114 grams fine weight; 50 pesos, 10.16983 grams gross weight and 9.15285 grams fine weight; 100 pesos, 20.33966 grams gross weight and 18.30570 grams fine weight.

ART. 5. The tolerance in the weight and fineness of the gold coinage shall be 0.001 when taken collectively, and the tolerance in the weight of gold coinage taken individually shall be 32 milligrams.

ART. 6. All gold coins coined in accordance with the law and whose weight meets the requirement as to tolerance shall have unlimited legal tender, and shall serve to meet all classes of obligations, public or private, unless a special agreement to the contrary has been made. The gold coins coined according to law No. 277 of February 11, 1895, shall be received in payment of any debt contracted in legal tender money at the rate of 1 old peso for 3 new pesos.

The gold coins, both old and new, which are below the limit of the legal tolerance, shall be received only for the value of their actual weight.

The coins dealt with in the present law as well as those issued under the law of February 11, 1895, shall serve for the payment of any obligation, contracted in national gold coin, at the rate of 1 old peso to 3 new pesos.

ART. 7. The mint and the Central Bank of Chile, which for this purpose will act as its agent, shall accept at their nominal value the Chilean gold coins which after 20 years from the date indicated on the coin show a loss due to usage of not more than one-half per cent of their legal weight. If they have been used less than 20 years, the loss shall be proportionate to the time elapsed. The President of the Republic shall establish the loss allowed in each case in order to protect the treasury against fraudulent clipping and similar illicit practices. All gold coins received at the mint which owing to usage have lost more than the permissible weight shall be melted and recoinced.

II. SILVER AND NICKEL COINS

ART. 9. There shall be three types of silver coins: 5 pesos, 25 grams gross weight and 18 grams fine weight; 2 pesos, 18 grams gross weight and 9 grams fine weight; 1 peso, 9 grams gross weight and 4.5 grams fine weight.

The fineness of these three coins shall be 0.720 for the 5-peso coin and 0.500 for the other two coins; copper shall be used exclusively for the alloy.

ART. 10. Any subsequent change will have to be authorized by law.

ART. 11. The tolerance of the silver coins shall be 0.004 for the fineness and 0.003 for the weight. For each silver coin the tolerance shall be 0.130 gram for all denominations.

ART. 12. No one shall be obliged to accept in payment for obligations more than 50 pesos in silver coins struck in accordance with this law. Coins clipped, perforated, corroded, or deteriorated in any way shall lose their legal tender quality.

ART. 13. The mint and the Central Bank of Chile, which for this purpose will act as its agent, shall accept deteriorated silver and nickel coins subject to the regulations dictated by the President of the Republic in order to protect the treasury against fraudulent clipping and other abuses.

Upon receiving said coins the mint and the Central Bank of Chile shall exchange them for new coins without any expense whatsoever to the bearer.

The coins deteriorated by use shall be melted and recoined.

ART. 15. The treasury, its branches and other public institutions, the railways and other fiscal enterprises, and the Central Bank of Chile shall accept the silver and nickel coins of legal weight in payment of any obligation without any limitation as to the amount.

ART. 16. The silver and nickel coins issued in agreement with previous laws shall remain legal tender at their face value, subject to the same conditions as govern the coins issued in virtue of the present law.

ART. 17. There shall be three types of nickel coins: 20 centavos, weight 4.5 grams; 10 centavos, weight 3 grams; 5 centavos, weight 2 grams.

The composition of these coins shall be 75 per cent copper and 25 per cent nickel.

The tolerance of the nickel coins shall be 0.03 for the fineness and 0.005 for the weight.

No one shall be obliged to accept more than 5 pesos in nickel coins for the payment of obligations.

III. VARIOUS PROVISIONS

ART. 18. The directorate of the Central Bank of Chile may provide, with the approval of the President of the Republic, and when in its judgment it is required by economic conditions, that the respective values shall be engraved in pesos and in condors on all gold coins, on the 5 pesos silver coin, and on the notes issued by the Central Bank of Chile. The expressions "condor" and "peso" may be used indiscriminately in contracts, in the quotations of prices, and salaries, in the imposition of taxes, and in any other public or private obligations involving the use of money.

ART. 19. Under the same conditions as provided in paragraph 1 of the above article the directorate of the Central Bank of Chile may replace the silver coins established by this law by the following four types: 5 pesos or one-half condor, 25 grams gross weight and 18 grams fine weight; 2 pesos, 10 grams gross weight and 7.2 fine weight; 1 peso, 5 grams gross weight and 3.6 fine weight; one-half peso, 2.5 grams gross weight, and 1.8 grams fine weight.

The fineness of these four coins shall be 0.720, and copper shall be used exclusively in the alloy.

ART. 20. From the date on which the directorate of the Central Bank of Chile will make use of the authority granted by the preceding article the coinage of the 1 and 2 peso silver coins established by this law shall be suspended.

ART. 21. The acceptance of any foreign money in payment of debts or other obligations, except in the case of contracts made in agreement with the law of September 10, 1892, and in which special money has been stipulated, shall cease to be obligatory after the promulgation of the present law.

ART. 22. All the obligations contracted in current money prior to the promulgation of the present law shall be met, peso for peso, in any of the moneys to which the present law imparts legal tender quality and in agreement with its provisions.

ART. 23. After the promulgation of this law the following laws are repealed: No. 277 of February 11, 1895, No. 3527 of August 8, 1918, No. 4014 of May 22, 1924, and the other legal provisions incompatible with the present law. On the

day on which the Central Bank of Chile will open officially its offices there shall be repealed the provision contained in law No. 3460 of December 30, 1918, which prohibits the exportation of gold.

ART. 24. The word "chileno" used in the laws promulgated prior to the present law shall be understood as being replaced by the word "condor," and the legal provisions referring thereto shall be applied in agreement with the provisions of article 18.

SANTIAGO, September 16, 1925.

COLOMBIA

COINAGE

[From Fifty-fifth Annual Report of the Deputy Master of the Royal (British) Mint]

Gold domestic coinage executed in home mints during 1924: 825,019 5-peso pieces, having a face value of 4,125,095 pesos (\$4,014,955).

GOLD PRODUCTION IN 1924

[From Commerce Reports, July 19, 1926]

Exports of gold decreased from \$5,800,000 in 1922 to \$4,000,000 in 1923 and \$2,000,000 in 1924.

VENEZUELA

GOLD PRODUCTION

[From American consul at Caracas. By courtesy of United States Bureau of Mines]

The gold production in 1925 was 950 fine kilos.

EUROPE

ALBANIA

CURRENCY

Previous to March 1, 1926, there was no official monetary system in Albania. The principal units of exchange prior to that time were gold napoleons, English gold pounds, Turkish sovereigns, American paper money, and the small silver coins of Austria, Yugoslavia, and Bulgaria. Italian money has been in very general use in southern Albania and along the coast line.

A limited issue of paper currency and small coins of alloy has been placed in circulation by the National Bank of Albania since March 1. This bank was established by an Italian group under a concession granted the Credito Italiano, and the money which it has issued very closely resembles the legal tender of Italy.

BELGIUM DENOUNCES THE LATIN MONETARY CONVENTION OF NOVEMBER 6, 1885

[From *Moniteur des Intérêts Matériels*, Brussels, February 9, 1926]

On December 28, 1925, the Belgian Government denounced the monetary convention concluded at Paris on November 6, 1885, between France, Greece, Italy, and Switzerland, to which Belgium had adhered by the additional act of December 12, 1885.

As this denunciation must be made one year in advance, according to article 13 of this international arrangement, Belgium will cease to be bound by said convention on January 1, 1927.

PROPOSED CHANGES IN CONTROL OF CURRENCY SYSTEM—NATIONAL BANK OF ISSUE

[From the Commercial and Financial Chronicle, New York, September 12, 1925]

Czechoslovakia is taking steps to separate her currency system from the ministry of finance, and to remove it from all connection with politics by transforming the present "banking office of the ministry of finance" into a national bank of issue. Early in 1919 after the partition of Austria-Hungary, the new Republic of Czechoslovakia found it necessary to take over the administration of the branch offices of the Austro-Hungarian National Bank which were located in the territory of Czechoslovakia. The banking office of the ministry of finance, which was organized for this purpose, has exercised all of the functions of a bank, and was also charged with the duty of managing the currency of the State. It has always been the intention of the Government to substitute a national bank of issue in its stead at the first opportune moment. The first steps to this end were taken in 1920 under the law of April 14 of that year; but, due to economic disturbances in Europe, this legislation could not be taken advantage of. The amount of domestic gold coinage executed in home mints during the year ended December 31, 1924, was 32,814 Czechoslovak ducats (\$75,057).

REORGANIZATION OF THE BANK OF ESTONIA

[From The Statist, London, June 20, 1926]

The Bank of Estonia, although theoretically a joint-stock company under State control, is in practice a State institution, because all the shares are now held by the Estonian Republic. It shares with the State the right of note issue, its circulation is backed to the extent of not less than 50 per cent by domestic bills, not less than 10 per cent by State notes, and the remainder by foreign balances, bullion, and Government securities. The present situation can not be said to conform to all the sound principles of central banking, and the League of Nations' experts suggest that the bank be made completely independent of the State; they recommend the handing over of the metallic reserve of the State and of the State note circulation to the bank. In order to make the cover to the notes as liquid as the function of these assets require, it is suggested that all advances and bills not recoverable within the next 10 months should be transferred to a separate mortgage institute, which should, in addition, take over all long-term loan operations at present effected by the State.

NEW MONETARY LAW CONTEMPLATED

[From bullion circular of Samuel Montagu & Co., London, April 21, 1926]

The Government is contemplating a new monetary law, under which the monetary unit will be a mark equivalent to one two hundred and forty-eighths of a gram of pure gold. A larger unit will be the kroon, consisting of 100 marks.

Gold coins will be minted of 500 marks or 5 kroons, 1,000 marks or 10 kroons, and 2,000 marks or 20 kroons. The weight of the 500-mark gold piece will be 2 $\frac{6}{7}$ grams, and all the gold coins will be of nine hundred one-thousandths fineness. Silver coins of 100 marks or 1 kroon, and 200 marks or 2 kroons, will be issued, together with smaller coins of 1, 2, 5, and 10 marks in a copper-nickel alloy. The mark will no longer be divided into 100 penni.

FINLAND

The estimated quantity of gold and silver used in the industrial arts during 1925 was as follows: Gold, 445 fine kilos (14,307 ounces); silver, 9,980 fine kilos (320,857 ounces).

MONETARY LAW

[December 21, 1925]

In accordance with the decision of the Diet it is hereby ordained that:

1. The monetary system of Finland is founded on gold as the sole measure of value.

2. The monetary unit is called a mark. The mark is divided into 100 penni.

3. Gold coins shall be struck of 100 and 200 marks' value, containing 3 $\frac{1}{2}$ and 7 $\frac{1}{2}$ grams of fine gold, respectively.

4. For the coining of gold coin 9 parts of fine gold and 1 part of copper in weight shall be melted together to standard gold. Of 2 kilos of minted gold 475 coins of 100 marks shall be struck, and of 4 kilos a like number of 200-mark coins. A 100-mark coin shall, therefore, weigh 4 $\frac{1}{5}$ grams, and a 200-mark coin, 8 $\frac{1}{5}$ grams.

6, 7. Small coins shall consist of coins of 1 mark, 50 penni, and 25 penni, which shall be struck of nickel-bronze (25 per cent nickel, 75 per cent copper), as well as copper coins of 10 and 5 penni, made of pure copper or 95 per cent copper, 4 per cent tin, and 1 per cent zinc.

8, 9. The weights of the small coins shall be 5.1, 2.55, 1.275, 5, and 2.5 grams, respectively.

20. This law enters into force on January 1, 1926, when the law and ordinance of August 9, 1877, shall cease to be valid.

NOTE.—No silver coins are provided for.

GOLD STANDARD ACT, 1925

(Chapter 29)

AN ACT To facilitate the return to a gold standard and for the purposes connected therewith. (May 13, 1925)

Be it enacted by the King's most Excellent Majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in this present Parliament assembled, and by the authority of the same, as follows:

1. (1) Unless and until His Majesty by proclamation otherwise directs—
(a) The Bank of England, notwithstanding anything in any act, shall not be bound to pay any note of the bank (in this act referred to as "a bank note") in legal coin within the meaning of section 6 of the Bank of England act, 1833, and bank notes shall not cease to be legal tender by reason that the bank do not continue to pay bank notes in such legal coin.

(b) Subsection (3) of section 1 of the currency and bank notes act, 1914 (which provides that the holder of a currency note shall be entitled to obtain payment for the note at its face value in gold coin), shall cease to have effect.

(c) Section 8 of the coinage act, 1870 (which entitles any person bringing gold bullion to the mint to have it assayed, coined, and delivered to him) shall, except as respects gold bullion brought to the mint by the bank of England, cease to have effect.

(2) So long as the preceding subsection remains in force, the Bank of England shall be bound to sell to any person who makes a demand in that behalf at the head office of the bank during the office hours of the bank, and pays the purchase price in any legal tender, gold bullion at the price of three pounds, seventeen shillings, and tenpence halfpenny per ounce troy of gold of the standard of fineness prescribed for gold coin by the coinage act, 1870, but only in the form of bars containing approximately four hundred ounces troy of fine gold.

2. NOTE.—This section provides for any necessary borrowing of moneys, within two years, in connection with the return to a gold standard.

3. This act may be cited as the gold standard act, 1925.

Average note circulation, and coin held by the Irish and Scotch banks and the Bank of England during the four weeks ended January 16, 1926

THE NEW HUNGARIAN CURRENCY

[From The Statist, London, October 24, 1925]

When the stabilization of the Hungarian crown, an integral part of the League of Nations rehabilitation program, was envisaged, it was found that the bulk of the resources placed at the disposal of the authorities for the purpose of currency reconstruction was in the shape of sterling balances. It was consequently decided to link the value of the paper crown not to gold but to sterling, and a "sterling exchange standard" system was thus instituted. The national bank, as from August 1, 1924, has been intrusted with the task of maintaining with all its resources a stable middle rate on London of 346,000 crowns to the pound. One of the reasons for the choice of this particular rate was that it represented the rate at which the Austrian crown, stabilized in terms of gold, would be quoted in London when sterling had returned to its gold parity. The ultimate aim was, therefore, to make the Hungarian crown equivalent to the Austrian crown. The scheme worked in exact accordance with plans, and throughout the appreciation of sterling in terms of gold the national bank was able to maintain the rate of the paper crown linked to sterling at the defined parity. The gold standard having once more been reestablished in Great Britain, Hungary was de facto on a gold exchange standard, and the moment had come for completing the monetary reconstruction by instituting a new unit of account. The paper crown was obviously of too little value to serve for this purpose. It was decided to create a Hungarian unit representing 12,500 paper crowns, and thus worth 1.25 Austrian schillings. The new unit is to be called the pengo, an old Hungarian name for florin, and will be subdivided into 100 krajcars. The pengo will have a London parity of about 27.70 to the pound, as against the old gold crown parity of 24.02 to the pound.

NEW MONETARY UNIT

[From Commerce Reports, May 24, 1926]

The Hungarian Parliament passed an act on November 21, 1925 (Act XXXV, 1925), creating a new monetary unit of gold to be known as the "pengo." The new currency is expected to go into circulation about November next, and the complete transition from the present system is to be accomplished by January 1, 1927.

One kilo of pure gold will represent 3,800 pengo. In minting gold coins, an alloy of nine-tenths gold and one-tenth copper will be used, one kilo of alloy, therefore, being coined into 3,420 pengo. The 20-pengo gold coins will weigh 5.8479531 grams gross and 5.2631578 grams net. One pengo will be equal to \$0.1748985, to 0.8631578 Hungarian gold crown of the old coinage, or to 12,500 paper crowns of the present currency. The pengo will be divided into 100 "fillers." Silver coins of 1-pengo denomination will be minted in an amount not exceeding 45,000,000 pengos; and 50, 20, 10, 2, and 1 filler pieces in an amount not exceeding 30,000,000 pengos. The silver coin will be an alloy containing 640 parts of silver to 360 parts of copper; for the 50, 20, and 10 filler coins an alloy of 25 parts nickel to 75 parts copper will be used; and for the 2 and 1 filler pieces an alloy of 95 parts copper, 4 parts tin, and 1 part zinc.

United States equivalent	24,498		69,026	

¹ Ounces, troy.

NOTE.—Expert opinion estimates that there has been used throughout the country, during 1925, 690 fine kilos (21,219 ounces) for dental purposes valued at 25,080,000 paper dinars.

The quantity of gold and silver extracted abroad from the copper ores of the country during 1925 is estimated as follows: Gold, 236 fine kilos (7,587 ounces); silver, 812 fine kilos (26,106 ounces).

Metallic stock and note circulation of the National Bank on December 31, 1925: Gold, 75,941,500 dinars (\$14,656,710); Silver, 17,484,281 dinars (\$3,374,466); Government notes, 1,783,363,090 dinars; national bank dinar notes, 4,164,203,140 dinars; national bank dinar-crown notes, 115,117,700 dinars.

ASIA

AFGHANISTAN

COINAGE

[From bulletin circular of Samuel Montagu & Co., London, June 23, 1926]

According to the Associated Press, the system of weights and measures and the coinage of Afghanistan have undergone a change.

A rupee styled the Afghani (as opposed to the old Kabuli of slightly lower value) is divisible into 100 pails, of which only 5 and 10 pal coins are issued. Twenty Afghanis equal one Amini—the standard gold coin.

ARABIA

ADEN AND OMAN

Premium on gold in 1925: Highest, 5 per cent; lowest, 2 per cent; average, 3.5 per cent.

Imports of Maria Theresa thalers from Trieste during 1925: 10,067,584 thalers (\$5,325,551).

Exports of Maria Theresa thalers during 1925: 8,994,269 thalers (\$4,757,788).

Stock of Maria Theresa thalers in Aden in April, 1926: 1,073,315 thalers (\$567,763).

ADEN

Premium on gold in 1924: Highest, 4 per cent; lowest, 2.5 per cent; average, 3 per cent.

Imports and exports of Maria Theresa thalers during 1924: Imports, 7,139,777 Maria Theresa thalers (\$3,855,480); exports to Abyssinia, 5,499,036 (\$2,969,480); exports to Arabia, Persian Gulf, etc., 1,640,741 Maria Theresa thalers (\$886,000).

Figures for imports and exports of silver rupees are not available separately for Aden, being included in the total trade for the Presidency of Bombay.

SILVER COIN IN CIRCULATION

[From Commerce Reports, May 3, 1926]

The rupee coin circulation is unofficially computed at 5,570,000,000 rupees, or about \$2,044,000,000 at the present exchange level of \$0.367 per rupee. As this figure does not allow for the coins that have been melted down during the past decades, those that are so tightly hoarded as to be virtually out of circulation, or those that are held in the paper currency reserve, the true circulation of rupee coins is believed to be very much smaller. It may be equivalent to only \$1,300,000,000.

¹ This amount is perhaps too high, owing to the export and melting down of considerable amounts of silver coin while the silver standard existed in the Dutch East Indies and also during a short time at the end of the war.

There is no premium on gold coin as compared with the actual currency consisting of silver coins and bank notes. Since the gold standard was restored (April 29, 1925) there is no premium on foreign gold coins, which are sold for hoarding and for industrial purposes.

¹ Foreign gold coin.

² Reported to the Director of the Mint in value only. Converted to fine ounces on basis of legal silver content of the coin and at the average price of silver in London.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEARS 1924 AND 1925

The following compilations have been made from such data as are available—avowedly incomplete. The amount of gold and silver in circulation in many countries is not obtainable, and in some countries that held by private banks can not be given.

For the United States the figures given cover all domestic gold and silver coin, but only such bullion and foreign coins as owned by the Government and Federal reserve banks. All foreign coin which comes into possession of the Government is converted into bullion.

Monetary stock of principal countries of the world, end of calendar year 1924

[stated in United States money (100 omitted), except paper stock, which is stated in monetary unit of issuing country (1000 omitted)]

- ¹ Includes gold and silver certificates (representing coin and bullion held in trust in the Treasury) redeemable on demand.
² Last year's figures.
³ United States currency.
⁴ Gold standard established Nov. 26, 1924.
⁵ Stock in bank.
⁶ Fluctuates with the price of silver.
⁷ Stated in U. S. dollars, and including \$900,000 in U. S. bills.
⁸ Stated on basis of data considered fairly reliable.
⁹ Stated in francs.
¹⁰ Stock held by one of three banks.
¹¹ Fluctuating amount held in banks.
¹² On June 30, 1924.
¹³ At the mint.
¹⁴ On Nov. 30, 1924.
¹⁵ In circulation on June 30, 1924.
¹⁶ Held in part, as note guaranty.
¹⁷ In October, 1924.
¹⁸ At the end of January, 1925.
¹⁹ Stock in national banks.
²⁰ Including minor coins.
²¹ Monetary standard not established.
²² Gold standard established June 20, 1924.
²³ In Bank of France coins.
²⁴ Including bronze coins.
²⁵ Gold standard established July 1, 1924.
²⁶ Including other coin.
²⁷ On Dec. 1, 1924.

1 Includes gold and silver certificates (representing coin and bullion held in trust in the Treasury) redeemable on demand.

2 Including some silver coin.

3 In Bank of Mexico.

4 Last year's figures.

5 Silver coin in circulation in April, 1926.

6 Fluctuates with the price of silver.

7 Stated in United States dollars and including \$800,000 in United States bills.

8 Government notes only.

9 Including minor coins.

10 Stated in francs.

11 On June 30, 1926.

12 New monetary unit established Sept. 17, 1925.

13 On Jan. 19, 1926

14 Estimated.

15 Gold certificates, Nov. 30, 1925.

16 Stock in national bank.

17 Monetary standard not established.

18 New monetary unit established Dec. 21, 1925.

19 New monetary unit established Nov. 21, 1925.

20 Incomplete.

21 On Jan. 1, 1926.

22 On Jan. 2, 1926.

23 Stated in Turkish pounds.

Monetary stock of principal countries of the world, end of calendar year 1925—Continued

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1924

PART I

REPORT OF THE DIRECTOR ON THE OPERATIONS
OF THE MINT SERVICE FOR THE
FISCAL YEAR 1934

REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 23, 1924

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1924, being the fifty-second annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1923.

OPERATION OF THE MINTS AND ASSAY OFFICES

INSTITUTIONS OF THE MINT SERVICE

Eleven mint service institutions operated throughout the fiscal year ended June 30, 1924: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which makes large sales of fine gold bars; mints at New Orleans and Carson City conducted as assay offices; and assay offices at Boise, Helena, Deadwood, Seattle, and Salt Lake City. The seven last-named institutions are, in effect, bullion-purchasing agencies for the large institutions, and also serve the public by making, at nominal charge, assays of ores and bullion. Electrolytic refineries are operated at the New York, Denver, and San Francisco institutions.

COINAGE

During the first half of the fiscal year the demand for small coins—quarters, dimes, nickels, cents—in the territory served by the Philadelphia Mint was such that the stocks of those coins were exhausted and it was necessary to operate the Philadelphia Mint on a 24 hours per day basis. It is thus evident that notwithstanding the enormous issues of small coins during the five-year period 1917–1921 there is no redundancy of coins below the dollar. As a result of the demand for small coins the total number of pieces, 262,178,080, of domestic coin executed during the fiscal year just closed exceeded the combined totals of the two preceding fiscal years, when the mints were principally occupied in replacing the silver dollars sold under the Pittman Act and in adding to the stock of gold coin. Silver dollars were made during the past fiscal year only at the Philadelphia Mint, the total being \$11,870,000. The Denver Mint operated almost exclusively on double eagles, which were also made at the San Francisco and Philadelphia Mints, the total gold coin executed being \$154,120,000. Subsidiary coin to the value of \$10,276,040 was executed and minor coin, \$3,822,420, was made, giving a total value

of domestic coinage executed, \$180,088,460. This compares with prior year value of \$172,196,760. Foreign coin was manufactured during the past fiscal year only at the Philadelphia Mint, the total number of pieces being 9,632,196, of which 4,482,196 silver 1-sol pieces were made for Peru, 4,450,000 silver pieces for Venezuela, and 700,000 bronze pieces for Nicaragua. The total number of pieces executed during the fiscal year, foreign and domestic, was 271,810,276, which compares with 136,758,500 during the prior fiscal year.

GOLD OPERATIONS

Gold acquired by the Government at the several mint service institutions during the fiscal year 1924 totaled \$488,753,331.72. This has been exceeded during only four fiscal years, as follows: 1917, 907.96 million dollars; 1921, 673.16 million dollars; 1922, 540.63 million dollars; 1916, 508.08 million dollars. During the 10 fiscal years 1915 to 1924, inclusive, since the beginning of the World War, the total gold acquired by the Government was valued at \$4,269,000,000. As during the previous fiscal year, the greater portion of gold received came to the United States assay office at New York in the form of imported refined bars, although foreign coin received at the New York office was a material item. United States gold coin received by the mints for recoinage amounted to \$3,008,441.65; transfers of gold between mint offices totaled \$9,493,529.07; and the aggregate amount of gold received by the several mint service institutions during the fiscal year 1924 was \$501,255,302.44.

SILVER OPERATIONS

Receipts of purchased silver during the fiscal year 1924 totaled 18,785,464.93 fine ounces, of which 15,601,961.73 fine ounces was Pittman Act silver, costing \$1 per ounce. The average cost of other purchased silver was slightly under 63.6 cents per ounce, total cost being \$2,011,633.03 for 3,183,503.20 fine ounces. Silver received in exchange for bars bearing the Government stamp totaled 3,196,585.49 fine ounces; United States silver coin received for recoinage totaled 1,492,359.05 fine ounces, the recoinage value being \$2,063,050.34; silver deposited in trust by other governments totaled 2,313,084.28 fine ounces; and transfers between mint service offices totaled 1,604,562.79 fine ounces, making the aggregate quantity of silver received by the several mint service offices during the fiscal year, 27,393,056.54 fine ounces.

All of the silver purchased under the terms of the so-called Pittman Act, remaining undelivered June 30, 1923, has been received during the past fiscal year except 588,642 ounces. Deliveries to the mints upon all accepted tenders must be made on or before October 1, 1924. Approximately 36,000,000 silver dollars remain to be coined from the silver purchased under this act.

The New York market price of silver during the fiscal year ended June 30, 1924, averaged \$0.64517; the lowest price was \$0.62875 on August 23-24, 1923; and the highest price \$0.675 on various dates in June, 1924.

Obverse

Reverse

HUGUENOT-WALLOON TERCENTENARY HALF DOLLAR

REFINERIES

The refinery at the Denver Mint, which has been closed since 1920, was reopened in September, 1923, on account of the large accumulations of unrefined gold and silver bullion. Material quantities of silver bullion purchased under the terms of the Pittman Act could not be coined until separated from other metals and impurities with which combined, such bullion representing a large inert governmental investment. Several years will be required for refining this silver, and with the accumulations and regular purchases of other silver and gold the continued operation of the Denver refinery will be essential.

Production of electrolytically refined gold by the three refineries—New York, San Francisco, Denver—totaled during the past fiscal year 3,925,962 ounces, as compared with 1,738,848 ounces from two refineries during the fiscal year 1923. Electrolytically refined silver from three refineries last year totaled 6,616,817 ounces, as compared with 3,570,784 ounces from two refineries during the fiscal year 1923. Both the New York and San Francisco refineries materially increased their production last year, while the Denver refinery contributed about 17 per cent of the total.

SPECIAL COIN DESIGN

The Huguenot-Walloon half dollar was authorized by act of February 26, 1923, in commemoration of the three hundredth anniversary of the settling of New Netherland (the Middle States) in 1624, by Walloons (French and Belgian Huguenots) under the Dutch West India Co. The obverse of the coin bears profile likenesses of Admiral Coligny and William the Silent, leaders in the strife for civil and religious liberty. The reverse bears a reproduction of the ship *New Nederland*, in which the refugees came to the New World.

STOCK OF COIN AND MONETARY BULLION IN THE UNITED STATES

On June 30, 1924, the estimated stock of domestic coin in the United States was \$1,864,423,056, of which \$1,083,053,827 was gold, \$503,754,851 standard silver dollars, and \$277,614,378 subsidiary silver coin.

The stock of gold bullion in the mints, assay offices, and Federal reserve banks on the same date was valued at \$3,407,753,476, a gain during the year of \$355,900,757; the stock of silver bullion was 32,655,072.24 fine ounces, a gain of 1,894,058.13 fine ounces.

PRODUCTION OF GOLD AND SILVER

Domestic gold production during the calendar year 1923 exceeded that of the three prior years, the total being \$51,734,000 as compared with \$48,849,100 in 1922. The output continues at approximately half of that for the record year 1915, when the total was \$101,035,700.

Silver of domestic production during 1923 totaled 73,335,170 fine ounces, this total having been exceeded only during the years 1915 and 1916. The record production of 1915 was 74,961,075 fine ounces, while the 1922 output was 56,240,048 fine ounces. The 1923 silver product is valued at \$60,134,839.

INDUSTRIAL CONSUMPTION OF GOLD AND SILVER

Gold consumed in the industrial arts during the calendar year 1923 is estimated at \$69,292,245, of which \$40,013,175 was new material.

Silver used in the arts is estimated at 36,824,977 fine ounces, of which 28,355,171 fine ounces was new material.

As compared with the prior year, gold consumption increased about \$10,000,000 and silver consumption decreased about 1,000,000 ounces.

IMPORT AND EXPORT OF DOMESTIC GOLD COIN

The net import of domestic gold coin during the fiscal year ended June 30, 1924, was \$19,183,640; during the prior fiscal year there was net export of \$1,431,911. During the 10 fiscal years 1915-1924, since the opening of the World War, there has been a net export of \$781,193,057. Since 1870 the net export of domestic gold coin has been \$1,658,842,121, as per tabulation, by fiscal years, which may be found in another section of this publication.

APPROPRIATIONS, EXPENSES, AND INCOME

Appropriations available for mint service during the fiscal year 1924 totaled \$1,542,522.50, and reimbursements to appropriations for services rendered amounted to \$333,751.60, making a total of \$1,876,274.10.

Expenses amounted to \$1,848,461.41, of which \$1,810,259.85 were chargeable to appropriations and \$38,201.56 chargeable to income.

The income realized by the Treasury from the mint service aggregated \$8,616,444.37, of which \$7,437,835.76 was seigniorage. The seigniorage included \$2,686,904.57 on the coinage of silver dollars, which amount offsets an equal loss which was incurred when the silver dollars were melted and sold under terms of the Pittman Act. The seigniorage on subsidiary silver coin was \$1,640,697.25; on nickel coin, \$2,228,371.99; and on bronze coin, \$881,861.95.

Summary of appropriations, expenses, and balances, fiscal year 1924

Items	Salaries	Wages	Contingent expenses	Increase of compensation	Freight on bullion	Total
Appropriations	\$265,330.00	\$756,892.50	\$336,500.00	\$178,800.00	\$5,000.00	\$1,542,522.50
Earnings credited to appropriations		240,221.35	84,530.25			333,751.60
Total available	265,330.00	1,006,113.85	421,030.25	178,800.00	5,000.00	1,876,274.10
Expenses	250,352.63	985,780.16	398,477.60	170,632.54	4,996.92	1,810,259.85
Unexpended balances	14,977.37	20,333.69	22,552.65	8,167.46	3.08	66,014.25

AN IMPROVED GOLD COINAGE ALLOY

Electrolytic cathode copper was substituted for electrolytic ingot copper at the three coinage mints during the past year for alloying the gold coinage. This resulted in a marked reduction of gold losses usually attending melting operations; it produced a better alloy and

coin of more uniformity of color and quality. Cathode sheet copper, being taken directly from the electrolytic process cells, does not absorb oxygen, which, with the formation of copper oxide, is incident to melting cathodes into copper ingots.

ADDITIONS AND IMPROVEMENTS

At the Denver Mint a new storage vault was installed during the past fiscal year, in the space formerly occupied by the power plant. It comprises two floors, each approximately 28 by 52 feet, and is modernly equipped; an automatic electric elevator provides ready transportation between floors for the heavily loaded trucks that are used in handling coin and bars.

At the Philadelphia Mint the new machinery built included coinage presses for the home institution, automatic scales for the San Francisco Mint, replacement parts for the several mints, and hand trucks for the New York assay office.

At the New York assay office the Cottrell electrical precipitator for the recovery of values carried off in the furnace gases, recently installed, was in operation during the entire year. The values recovered, operating on comparatively low-grade bullion, were materially greater than those obtained previous to installation of this precipitator. Larger recoveries on the normally higher-grade bullion treated are anticipated.

DEPOSITS OF GOLD AND SILVER, INCOME, EXPENSES, AND EMPLOYEES, BY INSTITUTIONS, FISCAL YEAR 1924

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1924, and the number of employees on June 30, 1924, at each institution, are shown in the following table:

Institutions	Number of deposits of gold and silver	Number of mint service transfers	Coining value of gold and silver received	Gross income	Gross expense	Excess of income (+) or of expenses (-)	Employees June 30, 1924
Philadelphia.....	20,783	1,388	\$27,659,943.66	\$6,770,548.21	\$868,623.08	+\$5,901,925.13	350

Total value.....	72,901,560	39,391,900	67,795,000	180,088,460	-----
Total pieces.....	214,328,830	39,473,000	8,376,250	-----	262,178,080
Prior fiscal year, total value.....	\$91,858,760	\$51,557,000	\$28,781,000	\$172,196,760	-----
Prior fiscal year, total pieces.....	79,221,000	34,945,500	18,692,000	-----	132,858,500

Coinage for other countries, consisting of 8,932,196 silver and 700,000 bronze pieces, made by the mint at Philadelphia during the fiscal year 1924, is detailed below:

Peru:			Venezuela—Continued.	
Silver—		Pieces	Silver—Continued.	Pieces
Un sol.....	4,482,196		1/2 bolivar.....	800,000
Venezuela:			1/4 bolivar.....	400,000
Silver—			Nicaragua:	
5 bolivars.....	500,000		Bronze—	
2 bolivars.....	1,250,000		Un centava.....	300,000
1 bolivar.....	1,500,000		Medio.....	400,000

ISSUE OF FINE GOLD BARS FOR GOLD COIN AND GOLD BULLION

The value of the fine gold bars issued in exchange for gold coin and bullion, monthly, by the United States mints at Philadelphia, San Francisco, and Denver, and the assay office at New York during the fiscal year 1924 was as follows:

EXCHANGED FOR GOLD COIN OR GOLD CERTIFICATES

Months	Philadelphia	San Francisco	Denver	New York	Total
1923					
July.....	\$60,989.58	\$54,757.60	-----	\$3,643,406.80	\$3,759,153.98

PURCHASE OF MINOR COINAGE METAL FOR USE IN DOMESTIC COINAGE

During the fiscal year 1924 there was purchased at the mint at Philadelphia 18,593,181.63 troy ounces of minor coinage metals at a cost of \$407,501.27, which includes 6,342,021.88 troy ounces in nickel blanks and 4,398,048.96 troy ounces in bronze blanks prepared for stamping, the former costing \$221,789.61 and the latter \$108,568.98.

There was also purchased during the same period at the mint at San Francisco 746,477.08 troy ounces of copper at a cost of \$6,654.31 for use in minor coinage, being the by-product of the refinery connected with that institution.

MINOR COIN DISTRIBUTION COSTS

The minor coinage distribution costs paid during the fiscal year 1924 from the profits on minor coinage amounted to \$36,964.17.

MINOR COINS OUTSTANDING

The following statement shows the coinage of minor coins, by denominations, the amount on hand, issued, melted, and outstanding June 30, 1924. Minor coins were first manufactured at the Philadelphia Mint in 1793; at the San Francisco Mint in 1908; at the Denver Mint in 1911.

Denominations	Coined	On hand	Issued (net)	Melted	Amount issued and outstanding June 30, 1924
Philadelphia:					
Copper cents.....	\$1,562,887.44	-----	\$1,562,887.44	\$382,493.39	\$1,180,394.05

PROOF BULLION (1.000 FINE)

In order to establish uniformity in assay of bullion in the offices of the mint service, all proof gold and proof silver is made at the mint at Philadelphia and furnished to other offices when required. The amount made during the fiscal year 1924 was: Gold, 798 ounces; silver, 1,121 ounces.

OPERATIONS OF THE MELTING AND REFINING AND OF THE COINING DEPARTMENTS, FISCAL YEAR 1924

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1924, was 58.90 million fine ounces of gold and 84.58 million fine ounces of silver. There were also operated upon at the coinage mints 37.86 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative officers, as prescribed in section 3542,

Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

GOLD BULLION

¹ No bronze coining operations during fiscal year 1924 at Denver Mint.

REFINING OPERATIONS

The net product of electrolytically refined gold and silver of the mint service during the fiscal year 1924 was 10,542,779.468 fine ounces; other electrolytic output included the equivalent of the refined metals used for aiding the processes, 1,305,386.824 fine ounces; the product of melting operations (only) totaled 1,369,852.104 ounces, making the total output of the refineries 13,218,018.396 fine ounces. Details are shown in the following table:

REPORT OF THE DIRECTOR OF THE MINT

COMMERCIAL AND CERTIFICATE BARS MANUFACTURED

During the fiscal year 1924 the coinage mints and the assay office at New York manufactured 183,628 gold and 10,713 silver bars, valued at \$488,684,236.72, as shown by the following table:

Institutions	Gold bars			Silver bars		
	Number	Fine ounces	Value	Number	Fine ounces	Value
Philadelphia.....	4,485	87,195.314	\$1,802,487.11

WASTAGE AND LOSS ON SALE OF SWEEPS

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1924, was \$7,829.04. A loss of \$11,492.15 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given below:

Items	Mint at—			Assay office at New York	Total
	Philadel- phia	San Fran- cisco	Denver		
Gold wastage:					
Melting and refining department	\$3,789.71		\$711.30		\$4,501.01
Coining department	451.35	\$204.16	217.02		873.43
Silver wastage:					
Coining department	922.62	300.61			1,223.23
Nickel wastage:					
Melting and refining department	465.54	52.17	13.01		530.72
Coining department	105.09	72.73			177.82
Bronze wastage:					
Melting and refining department	370.34	13.84	21.96		406.14
Coining department	88.53	28.16			116.69
Loss on sale of sweeps	6,089.42	2,222.23	1,017.56	\$2,162.94	11,492.15
Total wastage and loss	12,282.60	2,893.90	1,981.75	2,162.94	19,321.19
Reimbursements:					
Nickel and bronze wastage, from minor coinage profits	1,029.50	166.90	34.97		1,231.37
Other wastage and loss on sweeps, from contingent appropriation	11,253.10	2,727.00	1,946.78	2,162.94	18,089.82
Total reimbursements	12,282.60	2,893.90	1,981.75	2,162.94	19,321.19

ENGRAVING DEPARTMENT

During the fiscal year ended June 30, 1924, the engraving department made 3,840 working dies for domestic coinage, including those for the half dollar issued in commemoration of the Huguenot-Walloon Tercentenary. Master dies, hubs, and working dies were made for Venezuelan, Nicaraguan, and Peruvian coinage, and dies for the Harding memorial medal were engraved.

The electric furnace for use in hardening dies, installed toward the close of the prior fiscal year, has been used throughout this year with entire satisfaction. It gives a definite record of the critical point in the heating of the steel when quenching will give the best results, and is more economical of operation than a gas furnace.

ORE ASSAYS

A comparative statement of ore assays made at the minor assay offices since 1915 shows increased use of our facilities by the mining industry. The increased number of assays in the later years seems to indicate revival of prospecting.

Fiscal year	Ore assays made.	Amount of charges collected	Fiscal year	Ore assays made	Amount of charges collected
1915.....	1,404	\$885.65	1920.....	1,938	\$1,579.00

LABORATORY OF THE BUREAU OF THE MINT

From the domestic coinage of the calendar year 1923 the assayer of this bureau tested 92 gold coins and 732 silver coins, all of which were found within the legal requirements as to weight and fineness.

The greatest deviation in fineness of gold coins from standard (the limit of tolerance being 1 one-thousandth above or below) was 0.4 one-thousandth above and 0.4 one-thousandth below.

The greatest deviation in fineness of silver coins above standard (the limit of tolerance being 3 one-thousandths above or below) was 0.9 one-thousandth, while the greatest deviation below was 1.4 one-thousandths.

The following table summarizes results of fineness tests on domestic coin:

Fineness (thousandths)	Number of gold coins			Number of silver coins			
	Phila- delphia	Denver	Total	Phila- delphia	San Francisco	Denver	Total
898.6					3		3
898.9					4		7
899.1				3			3
899.3				21	16	6	43

ASSAY COMMISSION'S ANNUAL TEST OF COIN

Section 3547 of the Revised Statutes provides for an annual test of the domestic coinage executed during the prior year, by a commission of whom part are ex officio members, the others being appointed, without compensation, by the President. The purpose is "to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight." The commission, which met at the Philadelphia Mint February 13 to 15, 1924, reported the following results of their examination:

Your committee on counting respectfully reports that the packages containing the pieces reserved from the coinage made during the calendar year 1923 by the several mints for the trial of coins, in accordance with section 3539 of the Revised Statutes of the United States, were delivered to us by the superintendent of the mint at Philadelphia, and upon comparison with the transcripts kept by the Director of the Mint were found to be correct as to date, number of delivery, number of pieces, and denomination.

The verification of the packages being completed, they were delivered to the committees on weighing and assaying.

The committee on weighing have to report that they have weighed the coins shown in an appended list and have found them to be standard within the legal tolerances. The coins were selected at random from those reserved by the mints at Philadelphia, San Francisco, and Denver.

The coins were directly weighed against a set of sealed coin-weights which were accompanied by a certificate signed by the Director of the Bureau of Standards, Department of Commerce, and which gave the value of the weights in terms of United States standard. The weighings were made on a Troemner balance supplied by the Philadelphia Mint which was tested by your committee as to the equality of the arms and as to its sensibility, which were entirely satisfactory.

The committee on assaying respectfully reports that it has completed the assays of coin selected from the residues representing all denominations coined by the mints at Philadelphia, San Francisco, and Denver during the year 1923.

The coinage laws provide for variations in the fineness of individual coins of one one-thousandth for gold and three one-thousandths for silver, and, as shown by the schedules which follow, the coinage of the three mints has been within the legal limits allowed.

The assay balances and materials used in assaying and examined by the committee were found to be satisfactory; the committee, therefore, considers the assays to be accurate.

The highest assays on individual gold coin selected for assay were: Philadelphia, 900.3; Denver, 900.4.

The lowest assays on gold coin were: Philadelphia, 899.7; Denver, 899.4.

The highest assays on individual silver coin selected were: Philadelphia, 900.7; San Francisco, 902.2; Denver, 900.9.

The lowest assays on silver coin were: Philadelphia, 898.2; San Francisco, 898.4; Denver, 898.4.

ASSAY OF COINS MELTED IN MASS

Philadelphia, gold, 23 double eagles, fineness, 900. Philadelphia, silver, 20 dollars, fineness, 899.1. Philadelphia, 12 dollars, 40 quarter dollars, 30 dimes, fineness, 898.9.

San Francisco, silver, 13 dollars, 8 half dollars, 2 Monroe doctrine centennial half dollars, 6 quarter dollars, 45 dimes, fineness, 899.1.

Denver, gold, 15 double eagles, fineness, 899.8.

Denver, silver, 17 dollars, fineness, 899.1.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1924, is respectfully submitted.

R. J. GRANT,
Director of the Mint.

Hon. ANDREW W. MELLON,
Secretary of the Treasury.

PART II

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1923

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1923

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Geological Survey, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the survey. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1923 is estimated to have been \$51,734,000, and the production of silver is estimated at 73,335,170 fine ounces. A comparison of these figures with those for 1922 indicates approximately 2.9 million dollars increase in production of gold and approximately 17.1 million ounces increase in silver production. The 1923 silver production has been exceeded only in 1915 and 1916.

As regards the gold production of individual States, the outstanding feature was Arizona's large increase of over \$2,600,000 about 75 per cent over the output of the prior year. Utah's increase was over \$1,000,000; and Nevada's nearly \$800,000. The largest decrease was in California, over \$1,200,000; Alaska's decrease was \$634,000.

The silver output of Utah approached 20,500,000 ounces, nearly 28 per cent of the total for the country, and the record production of any State for any year. Utah's increase over the prior year was approximately 5,000,000 ounces; Montana's 4,500,000 ounces; Arizona's 2,700,000 ounces; Nevada's 2,300,000 ounces; Idaho's 2,200,000 ounces. The only material decrease was of about 500,000 ounces in Colorado.

A brief review of mining conditions, for which acknowledgments are made to the United States Geological Survey, follows; further information concerning same can be obtained by those interested by addressing the survey, at Washington.

ALASKA

Alaska mines in 1923 produced gold valued at \$5,985,314, compared with an output of \$7,422,367 in 1922. The value of silver produced in Alaska in 1923 was \$668,012, or \$61,933 less than in 1922.

In 1923 about 39.7 per cent of the total gold production came from lode mines, compared with 40.6 per cent credited to lode mines in 1922 and 47.5 per cent in 1921.

The auriferous lode mines produced during the year gold valued at \$2,343,181, and silver valued at \$63,334. Nineteen gold and silver lode mines and six prospects were operated in Alaska in 1923.

The copper ores contained \$33,633 in gold and \$586,333 in silver. The value of the placer gold produced in Alaska in 1923 was \$3,608,500 compared with an output of \$4,395,000 in 1922. The silver recovered from placer mining operations in 1923 was valued at \$18,345. Measured by production, gold mining declined during the year, while the output of copper increased 10 per cent and that of coal 50 per cent over that of 1922. In spite of the abatement of placer mining because of an unusually dry season the value of the mineral production of the region tributary to the Alaska Railroad in 1923 was \$2,080,000, as compared with \$1,840,000 in 1922. This increase was due to the larger production of coal and lode gold and proves that cheaper transportation has already stimulated the mining industry. With the rapid exhaustion of the bonanzas successful alluvial mining necessitates a greater use of power-driven machinery to harvest Alaska's very large reserve of low-grade auriferous gravels, but this work is possible only in easily accessible districts. It is estimated that about 446 placer mines were operated in the summer of 1923, and about 75 during the previous winter, but many for only a part of the season.

Twenty-five gold dredges were operated in Alaska in 1923, compared with 23 in 1922. These dredges handled about 4,645,053 cubic yards of gravel and produced gold valued at \$1,848,596. In 1922 dredges handled 3,186,343 cubic yards of gravel and recovered gold worth \$1,767,753. The average gold recovery per cubic yard was about 40 cents in 1923, and about 55 cents in 1922. Up to 1923 gold to the value of \$26,723,801 had been mined by dredges.

ARIZONA

The metal production of Arizona increased materially in 1923, as the mines and smelters were active after the dull periods of 1921 and 1922.

The gold produced had a value of \$6,121,121, an increase of \$2,596,987 over that of 1922, according to V. C. Heikes, of the United States Geological Survey. The largest part of the gold, or \$2,951,890, had its source in bullion from ore treated by amalgamation or cyanidation. Crude ore shipped directly to smelters contained gold valued at \$2,797,144, and concentrates, \$362,871. The gold from deep mines was derived from the following sources: Dry or siliceous ore, \$3,813,103; copper ore, \$2,205,503; lead ore, \$93,315; and copper-lead ore, \$346. Gold contained in siliceous ore was valued at \$1,571,964 more than in 1922. More than 98 per cent of the State's gold came from copper ore and siliceous ore combined. Placers produced only \$8,854 in gold.

The silver output amounted to 7,343,742 ounces, an increase of 2,811,878 ounces, and a record for the State. Unusual increases were made from both siliceous and copper ores. The sources of the silver output were: siliceous ore, 1,968,675 ounces; copper ore, 4,269,278 ounces; lead ore, 1,090,534 ounces; copper-lead ore, 15,183 ounces; and placers, 72 ounces.

There were 341 mines producing during the year, of which number only 24 were placer mines.

CALIFORNIA

The gold yield of California mines in 1923, according to James M. Hill, of the United States Geological Survey, was 647,209.75 ounces, valued at \$13,379,013, a decrease of 9 per cent as compared with the yield in 1922. The production from deep mines in 1923 was 25 per cent less than the previous year and totaled 331,679.78 ounces, valued at \$6,856,430. Placer mines in 1923 increased their production by 19 per cent to a yield of 315,529.97 ounces, valued at \$6,522,583. Deep mines produced 51 per cent and placer mines 49 per cent of the total gold output in 1923, and of the placer output of gold the dredges accounted for 93 per cent of the yield. Dry gold ore mined in California in 1923 yielded 48.06 per cent, dry silver ore 1.54 per cent, and copper ore 1.27 per cent of the total gold output.

There were 3,559,443 ounces of silver produced in California in 1923, valued at \$2,918,743, an increase in quantity of silver of 15 per cent but a decrease in value of 6 per cent, as compared with 1922. The yield of silver from placer operations was about one-half of 1 per cent of the total output of the State. Dry silver ores, largely the production of the California Rand silver mine, carried 77 per cent of the total yield. Copper ores carried 9.59 per cent, lead ores 9.28 per cent, and dry gold ores 2.31 per cent of the total silver production in 1923.

In 1923 there were 353 producing placer mines, including 29 dredges, and 268 producing deep mines in California.

COLORADO

Colorado mines in 1923, according to Charles W. Henderson, of the United States Geological Survey, produced \$6,591,629 in gold and 5,334,488 ounces of silver, as compared with \$6,373,419 in gold and 5,855,911 ounces of silver in 1922.

The gross calculated value of the recoverable gold, silver, copper, lead, and zinc represented an increase of 21 per cent over the value in 1922.

Teller County produced \$4,047,008 in gold as compared with \$4,037,582 in 1922.

Placer mines produced \$364,429 in gold in 1923, compared with \$356,403 in 1922, of which the dredges and hydraulic mines near Fairplay and Breckenridge produced \$347,847 in 1923, compared with \$354,764 in 1922.

Dry ores produced 89 per cent of the gold and 74 per cent of the silver; lead ore and lead-zinc ores produced 22 per cent of silver.

CENTRAL STATES

As in 1922, only three of the Central States reported any production of silver in 1923—Michigan, Missouri, and Illinois. The total production was 409,437 fine ounces against 595,671 ounces in 1922.

All the silver production of Michigan, 223,997 ounces, was derived from lode copper mines, and the output decreased 152,993 ounces, chiefly owing to the smelter quality of copper electrically refined.

A smaller quantity of skimmings from lead derived from galena ores mined in southeastern Missouri was refined, and the production decreased from 212,656 ounces in 1922 to 177,270 ounces in 1923. No silver was reported in 1923 from Missouri copper ores.

From the lead concentrates derived from southern Illinois fluorspar mines, 8,170 ounces of silver were recovered, which was 2,145 ounces more than in 1923.

EASTERN OR APPALACHIAN STATES

The mine production of gold in the eastern or Appalachian States decreased from 620.22 fine ounces, valued at \$12,821, in 1922 to 578.58 fine ounces, valued at \$11,919, in 1923. Georgia produced \$529; North Carolina, \$1,102; South Carolina, \$313; Tennessee, \$6,615; and Pennsylvania, \$3,246.

The production from placer mines was 49.34 ounces, a decrease of about 61 ounces. The placer production came from 7 small mines in Alabama, Georgia, North Carolina, and South Carolina. The gold recovered from siliceous ores in Georgia, and North Carolina was 21.18 ounces, produced by 4 small mines. Of the total gold derived from copper ores in Tennessee and pyritiferous magnetite ores in Pennsylvania, 506.06 ounces, Tennessee produced 320 ounces.

The mine output of silver in 1923 was 108,791 ounces, an increase of 28,235 ounces, as compared with that of 1922. Of this output, 105,712 ounces was obtained from Tennessee copper ores, 3,005 ounces from Pennsylvania magnetite ores, 74 ounces from copper ores from Georgia, 4 ounces from placer bullion, and 4 ounces from dry and siliceous ores.

IDAHO

In 1923, according to C. N. Gerry, of the United States Geological Survey, Idaho's output of gold was valued at \$767,427 and that of silver, \$6,292,403. The increase in both gold and silver was due to steady dredge operations and greater activity at mines producing silver-lead ores.

Gold increased from \$501,405 in 1922 to \$767,427 in 1923. Of this total the placer gold amounted to \$498,709, against \$183,972 in 1922. The gold won by dredges was valued at \$469,900, an increase from \$158,827 in 1922. Dry or siliceous ore produced more gold than any other kind of ore, or \$135,817. Gold in copper ore was valued at \$31,355; lead ore, \$42,708; copper-lead ore, \$53,480; and lead-zinc ore, \$5,358. In 1923 nearly 83 per cent of Idaho's gold came from placers and siliceous ore.

The silver output was 7,673,662 ounces, an increase of 1,591,797 ounces. Most of the silver, or 5,489,477 ounces, came from lead ore. Lead-zinc ore supplied 1,118,813 ounces; copper-lead ore, 917,215 ounces; siliceous ore, 67,294 ounces; copper ore, 74,247 ounces; and placers, 6,616 ounces. The Coeur d'Alene region alone produced 6,117,621 ounces of silver.

There were 231 mines producing during the year, of which 85 were placer mines and 146 deep mines.

MONTANA

Montana's mine output of gold in 1923, according to C. N. Gerry, of the United States Geological Survey, was valued at \$1,758,748, an increase of \$101,991. Of this total, \$1,717,969 came from deep mines and \$40,779 from placers, in which there was a marked decrease on account of the removal of the dredges from Madison County in 1922. As in former years, the gold was derived principally from siliceous ore, which was the source of \$1,131,655. Gold from other sources was as follows: Copper ore, \$408,820; lead-zinc ore, \$60,527; zinc ore, \$62,410; lead ore, \$48,954; and copper-lead ore, \$5,603.

The silver produced increased from 12,468,151 ounces in 1922 to 13,380,862 ounces in 1923. The increase of 912,711 ounces resulted from greater activity of the copper mines at Butte. Copper ore supplied the largest quantity of silver, 7,619,864 ounces; lead-zinc ore, 1,582,548 ounces; siliceous ore, 1,280,235 ounces; zinc ore produced 2,119,593 ounces; lead ore, 437,703 ounces; and copper-lead ore, 340,558 ounces.

There were 382 producing mines, of which 304 were deep mines and 78 were placer properties.

NEVADA

The gold output of Nevada in 1923, according to V. C. Heikes, of the United States Geological Survey, had a value of \$4,223,109, an increase from \$3,297,384 in 1922. The production of gold from the Tonopah district, Nye County, was \$1,107,329, a slight decrease from that of 1922, but the Comstock district produced \$956,818 in gold, a decided increase. Most of the gold, \$3,456,217, came from siliceous ore. Copper ore supplied gold valued at \$610,876; placers, \$81,485; lead ore, \$53,160; lead-zinc ore, \$6,629; copper-lead ore, \$14,639; and zinc ore, \$103.

The production of silver in 1923 was 10,614,564 ounces, against 8,619,587 ounces in 1922, an increase of 1,994,977 ounces. The mines of the Tonopah district, Nye County, produced 5,176,306 ounces, which is more than any other district of the State produced. At Tonopah the output decreased from 5,436,080 ounces in 1922 on account of the decrease in the price of silver and the exhaustion of some of the ore bodies. Most of the silver of the State, 9,084,056 ounces, had its source in siliceous ore, the greater part of which was cyanided. Silver from lead ore amounted to 1,238,842 ounces; lead-zinc ore, 191,906 ounces; copper-lead ore, 13,089 ounces; copper ore, 84,568 ounces; zinc ore, 320 ounces; and placers, 1,783 ounces.

There were 389 mines producing in Nevada in 1923, of which 35 were placer mines and 354 were deep mines.

NEW MEXICO

New Mexico mines, in 1923, according to Charles W. Henderson, of the United States Geological Survey, produced \$551,713 in gold and 747,127 ounces of silver, as compared with \$412,693 in gold and 752,240 ounces of silver in 1922. The placer output was only 204 ounces of gold and 30 ounces of silver. Dry ores produced 47 per cent of the gold and 73 per cent of the silver, and copper ore produced 52 per cent of the gold and 22 per cent of the silver.

OREGON

The value of the output of gold, silver, copper, and lead in Oregon in 1923 was \$767,590, a decrease of \$61,304, as compared with 1922, according to J. M. Hill, of the United States Geological Survey. There was a decrease of output in all metals except copper. Fifty-five deep mines and 151 placer operations were reported in 1923.

The gold output in 1923 was valued at \$498,008, a decrease of \$33,561 as compared with 1922. The quartz mines produced 44 per cent of the total gold, and more gold than in 1922, the output being \$221,238 in 1923. The placer mines produced 56 per cent of the total gold, but decreased their output over 3,300 ounces to a total of \$276,770 in 1923. The dredges in Baker and Grant Counties yielded 88 per cent of the placer gold output of the State. The entire gold won by dredges in the State was 81 per cent of the placer gold and 45 per cent of the value of all the gold produced in the State.

The dry gold ore mined in Oregon in 1923 contained 7,506.11 ounces of gold, or 31 per cent of all the gold produced in the State, and 70 per cent of the gold derived from deep mining. Gold produced from dry silver ores in 1923 amounted to 14.30 ounces, and copper ores yielded 3,181.98 ounces of gold, or 13 per cent of the State total.

The silver output of Oregon decreased from 151,812 ounces in 1922 to 96,322 ounces in 1923, due largely to curtailed production at the Bay Horse silver mine during a period of intensive development work. Practically all of the silver came from operations in Baker and Grant Counties, the dry silver ore carrying almost half of the deep-mine silver output, which was 94,260 ounces. Dry gold and copper ores yielded practically the same amount of silver, the dry gold ore yielded 25,515 ounces, or 26 per cent of the total, and the copper ore yielded 22,511 ounces of silver, or 23 per cent of the total. Placer operations in 1923 contributed 2,062 ounces of silver, or 2 per cent of the total yield.

SOUTH DAKOTA

The Black Hills of South Dakota have produced from 1876 to 1923, inclusive, a total of \$243,152,930 in gold and 7,128,061 ounces of silver. In 1923 there was no placer production, as compared with 88 ounces of gold in 1922. The Homestake mine, at Lead, the principal producing mine in South Dakota since the beginning of production in 1876, produced \$6,400,078 in gold (silver) bullion in 1923. The Trojan mill was operated only to February 13, 1923. The total production in South Dakota in 1923 was \$6,406,306 in gold and 95,844 ounces of silver.

TEXAS

Texas mines in 1923 produced 811,824 ounces of silver and small quantities of lead and copper. Since the beginning of mining in Texas in 1885, the output of silver has been 17,257,304 ounces, most of which has come from the siliceous ores mined from the Presidio mine, in the Shafter district, Presidio County.

UTAH

The value of the 1923 metal output of Utah increased to \$66,472,911 in 1923, according to V. C. Heikes, of the United States Geological Survey, due principally to the increase in the production of copper and lead. The State made a record output of silver in 1923, but the value of the output was less than in 1922 on account of the lower average price.

The gold output was valued at \$3,076,483, an increase of \$779,628 over that of 1922. Separated as to source, copper ore was most important, containing gold valued at \$1,740,633; siliceous ore supplied \$676,269 in gold; lead ore, \$441,671; lead-zinc ore, \$216,867; and copper-lead ore, \$516. Placer mines produced only \$527 in gold in 1923.

The silver production of Utah increased from 17,271,100 ounces in 1922 to 19,137,470 ounces in 1923, the largest yearly output ever made from the State. Separated as to source, the silver came principally from lead ore, which supplied 10,648,952 ounces; dry or siliceous ore supplied 6,737,300 ounces; copper ore, 867,618 ounces; lead-zinc ore, 852,617 ounces; copper-lead ore, 30,924 ounces; and zinc ore, 56 ounces. The Tintic district, in Juab and Utah Counties, produced 9,231,960 ounces, against 8,533,954 ounces in 1922. The Bingham district of Salt Lake County produced 2,046,071 ounces, and the Park City region, in Summit and Wasatch Counties, 5,956,687 ounces.

There were 150 producing properties in 1923, of which 4 were placer mines.

WASHINGTON

The production of gold, silver, copper, lead, and zinc in Washington in 1923, according to C. N. Gerry, of the United States Geological Survey, had a total value of \$1,965,666, an increase of \$484,858 from the production of 1922. The mines of Washington were not generally active during 1921 and 1922, and the output of 1923 was the first normal one since the World War.

The gold output had a value of \$342,067, an increase of \$155,102. Most of the gold of the State, or \$337,962, came from siliceous ore; copper ore supplied only \$1,654 in gold; lead ore, \$898; copper-lead ore, \$42; and placers, \$1,511. Since 1860 Washington has produced \$28,784,590 in gold.

The silver output in 1923 was 227,187 ounces, valued at 82 cents an ounce, an increase of 22,141 ounces. Of the total silver, 127,029 ounces had its source in siliceous ore, 60,805 ounces in copper ore, 36,819 ounces in lead ore, and 2,511 ounces in copper-lead ore.

There were 6 placers and 30 deep producing mines.

WYOMING

The total production of gold in Wyoming from 1867 to the end of 1923 has been \$1,237,624 and the output of silver for the same period has been 70,113 ounces. There were 3 producing mines in Wyoming in 1923, the Rambler, at Holmes, from which several cars of copper ore carrying gold, silver, platinum, and palladium were shipped; the Sunrise mine, at Sunrise, from which several hundred tons of copper ore were shipped; and the De Pass (Williams-Luman) mine from which one car of copper ore was shipped.

Wyoming mines in 1923 produced \$296 in gold, 254 ounces of silver, and 111,280 pounds of copper.

Refinery production of gold mined in the several States and Territories in 1922 and 1923, with the increase and decrease in each for the latter year

¹ Includes small quantity of silver from placer mine.

² Includes silver in silver-lead, lead, lead-zinc, copper-lead, copper-lead-zinc, and zinc ores.

³ Philippine Islands and Porto Rico excluded.

PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES SINCE 1792

The refinery production of gold and silver from the mines of the United States since 1792 is shown in the following table.

The commercial value of the silver product is reckoned at the average yearly market price of silver on the New York market.

Production of gold and silver in the United States from 1792 to 1844 and annually since

[The estimate for 1792-1873 is by R. W. Raymond, commissioner of mining statistics, and since by Director of the Mint]

Calendar years	Gold		Silver	
	Fine ounces	Value	Fine ounces	Commercial value
1792 to July 31, 1834.....	677,250	\$14,000,000	Insignificant.

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES
DURING THE CALENDAR YEAR 1923

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the United States assay office at New York and the mint at Philadelphia hold the foremost places; consequently, the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1923, with the class of material from which they were made:

Gold and silver issued for use in the industrial arts during the year ended December 31, 1923

Material	Issued by—	Gold	Silver
		Dollars	Fine ounces
Bullion.....	Mints and assay offices.....	60,235,677	1,716,433
Bullion in various forms.....	Private refineries.....	5,556,568	35,031,200
United States coin ¹	Banks, etc.....	3,500,000	77,344
Total.....		69,292,245	36,824,977
Old jewelry, plate, scrap, etc., contained in private refinery returns, and that returned to monetary use.....		29,279,070	8,469,806
New material.....		40,013,175	28,355,171

¹ Estimated; the quantity of silver is equivalent to 100,000 silver dollars.

Gold furnished for use in manufactures and the arts and classification of the materials used, by calendar years, since 1880

Calendar years	New material			Old material	Grand total
	United States coin	Domestic and foreign bullion and foreign coins	Total		
1880.....	\$3,300,000	\$5,511,047	\$8,811,047	\$1,29,385	\$10,105,432
1881-1885.....	18,575,000	34,952,669	53,527,669	9,313,984	62,841,653
1886-1890.....	17,500,000	42,557,772	60,057,772	20,147,122	80,204,894
